Iran urges coordination with Kabul to restore peace

Iran-S. Africa trade planned to hit $2b by 2021

Rouhani's economic legacy

To get a better view of what Rouhani did in his tenure, it is worth re-considering that when he took office in August 2013, Iran was experiencing unstable economic situation. Unemployment rate was high, inflation was rampant, and stagnation was deep. During the past almost four years, Rouhani and his cabinet worked hard to awaken Iran's dormant economy wounded by improper policies under president Mahmoud Ahmadinejad via adopting various political and economic measures, both domestically and internationally.

Today, the results of applying such strategies account for major accomplishments by the Rouhani administration.

The key political-economic achievements of Rouhani was the Joint Comprehensive Plan of Action (JCPOA), the official name for the nuclear deal was signed between Iran and world powers in July 2015 and was implemented in January 2016. Based on the deal, nuclear-related sanctions on various Iranian business sectors were lifted, JCPOA, in fact, triggered a chain of positive economic outcomes for Iran's economy.

Today, the results of applying such strategies account for major accomplishments by the Rouhani administration.
Envoy: 11 polling stations for Iranians in Britain

Rouhani urges more freedom for political groups

"The talks were limited to certain border and security issues to ensure safer border." Western powers, particularly the US, have launched claims about Iran's support for the Taliban, an allegation rejected by Tehran as "baseless and illogical".

In 2007, the United States said it was concerned over reports that Iranian-made weapons are crossing the Afghan border and reaching Taliban insurgents, what Tehran roundly rejected as "baseless and illogical".

The report was also rejected by the Taliban which said they were not acquiring Iranian arms.

Also, last February the top US commander in Afghanistan Army Gen. John Nicholson told the Senate Armed Services Committee that Russia and Iran were supporting the Taliban in part to undermine the U.S. and NATO mission to attain peace and stability in the nation.

The first official peace talks between the Afghan Taliban and the government in Kabul concluded in July 2015. Pakistan hosted the meeting in a tentative step towards ending more than 13 years of war in neighboring Afghanistan, where the Taliban have been trying to re-establish their hardline, radical rule after it was toppled by US-led military intervention in 2001.

Iran is one of Afghanistan's neighbors who strongly endorses peace-seeking efforts in the country. Last January, Iranian Foreign Minister Mohammad Javad Zarif reaffirmed his country's support for efforts aimed at bringing security to Afghanistan.

"Iran is ready to have closer cooperation with the UN and its affiliated agencies in all areas related to Afghanistan," Zarif said in a meeting with UN Secretary General, Special Representative in Afghanistan and Head of UNAMA, Tadamichi Yamamoto in Tehran.

Elections create ‘security shield’ for Iran: Larjani

There is high turnout in healthy democracy: ex-CLAIA advisor

Six candidates are competing for the presidential post. However, some candidates may withdraw before the voting starts. Simultaneously, council elections will be held.

In what way can high turnout in elections help political development?

The top officials in Tehran, the capital of Iran, have said high turnout in the presidential election that will be held on May 19 is important to turn out in election in large numbers, the senior lawmaker said.

Larijani also said that he has not expressed any intention so far for holding another election.

Syria nears full control over Damascus suburbs

The Syrian military is about to re-establish control over another district in the capital Damascus' countryside after the government reaches an agreement with the militants enabling their evacuation.

The state news agency announced the development on Sunday, and AFP reported that 10 buses had arrived at Qaboun District to take the militants and their families to the northwestern Idleb Governorate as per the deal.

The army offensive entered a higher gear in recent months in Damascus and Hama, ending a local truce that had been in place there since 2014 and shutting access to a network of underground tunnels that supplied besieged eastern Ghouta, causing supplies to run dry and prices to rocket. Similar evacuation deals in the Palestinian refugee camp of Yarmouk also led to sit-ins, a blockade, and an agreement.

France's Macron takes power, vows to overcome division

The arrival in power of Macron, who was marked by a 23-gun salute at the Espadon des Invalides behind the Eiffel Tower signaled at least a pause in the an-
ti-globalization trend that brought Donald Trump the U.S. presidency and led British voters to vote for Brexit. Macron is now in the midst of a ceremony conducted with the pomp and glitter of high state occasions in France, Macron was presented with what is effectively his chain of office - a heavy golden necklace mounted on a red velvet cushion that makes him Grand Master of the National Order of the Legion d'Honneur - an honor system for servants of the French state.

The division and fractures in our societies must be overcome, said Macron.

The division and fractures in our societies must be overcome, said Macron. He called for a "new politics" and "new voluntarism". "We cannot do this in a week, but we can do it in months, he said." Macron also supported a "national pact" and a "national dialogue" to overcome the division.

The French president also called for a "new politics" and "new voluntarism". "We cannot do this in a week, but we can do it in months, he said." Macron also supported a "national pact" and a "national dialogue" to overcome the division.

Macron also renewed his commitment to the fight against terrorism since the Arc de Triomphe in driving rain to light the flame in tribute to France's war deed at the tomb to the Unknown Soldier - a po-
tinent of the Republic's role in the NATO (North Atlantic Treaty Organization) De-
forces alliance.

Macron also showed determination in the fight against terrorism since the Arc is not far from where a policeman was shot dead by a gunman acting for the Islamic State in Iraq and the Levant (IS/ISIL/Daesh) terrorist group shortly before the May 7 elections.

The divisions of the political landscape and the polarisation of France's political life were on show when President Emmanuel Macron was presented with the Tomb of the Unknown Soldier in the Arc de Triomphe in driving rain to light the flame.

In the first round of voting, more than 45 percent chose either Le Pen or other candidates who promised the opposite of Macron's medicine - that they would close the wealth gap by rolling back globalization, closing borders and unraveling the institutions of the European Union.

The business-friendly labor reforms in the Arc de Triomphe were viewed as a blow to the traditional left-wing of French politics, with Macron's campaign team saying that the move was aimed at "liberalizing" the labor market and making it more competitive.

LePen, in contrast, promised to "nationalize" key industries and bring back the "socialists" to power.

**Iran-S. Africa trade planned to hit $2b by 2021**

The minister also said a new tax revenue proposal, which has yet to be approved by the parliament, would further increase government coffers in the coming months.

The finance minister said: “As Iran moves forward, the Belt and Road initiative, in addition to the BIMSTEC cooperation, will make a huge contribution to the administration of the Islamic Republic. Therefore, the next stage is to develop Iran’s economy, which will lead to a rise in its foreign trade, and then increase its trade with South Africa.”

The new tax structure is an incentive for investors, he said. “Unlike earlier, the more they produce and introduce new products, the more they will be able to benefit from tax exemptions,” he added.

The minister stressed that the tax reform was focused on increasing the export of goods and services, with a view to creating new job opportunities in the country.

The moves are in line with Iran’s commitment to implement the economic part of the Joint Comprehensive Plan of Action (JCPOA), a nuclear deal with six major world powers that came into force in 2015.

Iranian President Hassan Rouhani said last year that his administration had “achieved significant achievements” in the field of economic reforms.

**LHayat government revenue jumps 17% year on year in Q1**

In fact, Rouhani’s mission is not accomplished yet. There is a long way for economic reforms. Yet, experts say that the JCPOA did not work as hoped. They say that Rouhani has failed to curb unemployment rate, unlike what the government said. The experts say that Rouhani has failed to curb unemployment rate, unlike what the government said.

While President Rouhani expresses that regarding the existing political, economic and social problems in Iran, there are no solutions. They say that Rouhani has failed to curb unemployment rate, unlike what the government said.

Iran ramps up oil exports to South Korea, much to Trump’s chagrin

South Korea will be under pressure to import more oil and gas from the U.S., having ramped up Iranian imports in recent months to the displeasure of Washington.

Iran is one of the biggest oil exporters to South Korea, and its supply to the country has actually increased since the lifting of sanctions associated with its nuclear program earlier this year.

Iran became the second-largest oil exporter to South Korea in the first three months of 2017, delivering a record 18.54 million barrels, more than double the amount delivered over the same period a year ago.

“South Korea couldn’t bring crude from Iran for a while as we thought it used a lot of its crude in the past. But now as the sanctions are lifted, we’re back to normalcy,” Kim Jai-kyung, research fellow at state-run Korea Energy Economics Institute told Reuters.

Iran’s Caspian Pipeline—which runs from the giant Tengiz field to the southern port of Aktau—has been expanded to 1.6 million barrels per day (bpd) to produce an additional 800,000 barrels a day, according to Iran’s state oil news agency IRNA.

President Trump’s eagerness to cause conflict with Iran can be better understood in the context of these economic considerations. “This is the biggest potential market for Iranian oil and gas, which puts Tehran on course for conflict with the U.S., since Washington also wants to increase LNG exports in the context, including LNG in a recent trade agreement with Beijing,” (Source: Spatlv)

OPEC’s staking down a double-barrel cut

OPEC is going to have to do much more than simply extend its current production deal when it meets next week if it’s serious about addressing surplus inventory.

In its own figures on how much it needs to double the cut it made in January, it finds that mere extension of the cuts won’t bring excesses at the end of the first quarter at 276 million barrels a day in March. That may seem like a lot, but OPEC has put the inventories in the nine months begun at the end of December at 300 million barrels a day. Hence, it has to find another 24 million barrels a day if it’s serious about addressing surplus inventory.

By Julian Lee

Referring to the 2017 oil exports plan, the manager said that the Caspian field in Kazakhstan will account for 14 million tons out of the 65 million oil exports this year, compared to 836,902 tons the field contributed in 2016.

The joint venture operating Kazakh, North Caspian Oil Operating Company, said in January this year that it was ramping up production to the field at a capacity of 180,000 bpd, following the resumption of output in the first quarter last year.

CPC’s top three shareholders are Russia with 31 percent, Kazakhstan with a 20.75-percent interest, and Chevron Caspian Pipeline Consortium with 15 percent. (Source: airlive)

Caspian pipeline to boost oil exports in 2017

The planned increase in oil exports via CPC is 47 percent, and this year’s exports of 65 million tons equal 1.3 million barrels per day, according to Reuters. CPC’s Gorban was speaking to reporters at the launch of two new pumping stations along the Caspian Pipeline route that will raise the pipeline capacity to 67 million tons a year.

Last year, CPC’s revenue grew by 7 percent annually to $1.6 billion, due to higher oil transportation volumes. Profit jumped 18 percent to come in at US$237 million in 2016, Gorban said.

Referring to the 2017 oil exports plan, the manager said that the Caspian field in Kazakhstan will account for 11.4 million tons out of the 65 million oil exports this year, compared to 836,902 tons the field contributed in 2016.

The Caspian Pipeline—which runs from the giant Tengiz oil field in Kazakhstan to a sea terminal near Novorossiysk in Russia—plans to increase its exports to the world markets to 65 million tons this year from 44.28 million tons last year, Nikolay Gorban, general director of the Caspian Pipeline Consortium (CPC), said May 12.

The export plan for this year, based on nominations submitted by shippers, will add more oil to the global market and that’s just in the developed countries of the OECD. Merely extending the cuts won’t bring oil inventories back to their five-year average of 250 million barrels a day by the end of the year. And let’s set aside the fact that the five-year average has been inflated by two years of surplus, which means stockpiles will have to come down significantly below that to return to normal levels. Implementation of the agreement so far has been better than expected, but that doesn’t mean to project the deal’s survival is anything else. Ensuring compliance in the second half will probably prove much harder. Since in any event, we’re not going to achieve their targets by simply bringing forward maintenance at oil fields and fields to their five-year average, cuts will require real sacrifices, like shuttering production and reducing exports. That’s a risk even if won’t be sufficient.

What it takes

North American output is booming, and there are signs of recovery in Libya and Nigeria. The U.S. Department of Energy recently published a report that the revised country’s oil output up even by 9.66 million barrels a day as of October 2016 as stipulated by OPEC. But crude production is now expected to rise by 90,000 barrels a day between December 2016 and December 2017. That compares with a -210,000 barrel a day increase it forec the end of OPEC’s Novembers. Adding in a 470,000 barrel a day bar along the Caspian Pipeline route that will raise the pipeline capacity to 67 million tons a year.

IsIL is losing Mosul, but it is far from done

There are fewer than 1,000 ISIL terrorists left in Mosul thanks to the unity of the Iraqi military and the coalition. In fact, victory against them in the besieged Iraqi city has become so probable that ISIL, has resorted to the most despicable tactics – such as welding doors shut to stop residents from fleeing and even booby-trapping those homes – in a last-ditch attempt to preserve their waning grip on power.

Across the border, US-backed Syria forces began the operation to take Raqqa back in late October. Piece by piece, ISIL’s self-proclaimed “caliphate” is being dismantled.

The president apparently woke up in a bad mood Friday morning and took it out on his better-than-expected base. “The Fake Media is working overtime today!” he tweeted. He also shared a clack of information, which did not seem to fail into questions of collusion between Russian media and his presidential campaign is nothing more than a Democratic fabrication to explain away how that party lost the election. Then he suggested canceling daily press briefings because his spokespeople “vent their White House facts straight (ruever than the mind facts that seem to be going to the broader public) of border sanctuaries.

And yet, to assume that more options are available to the Taliban on the defensive is to badly underestimate the many different sources of their success.

The Taliban leadership has safe havens in neighboring Pakistan, and insurgents never die slow deaths – they try to win by border sanctions.

In recent days, with Afghanistan’s Taliban–American relationship at its lowest level.

The U.S. Empire was Made in North Korea

By Don Gorrie

A highly influential new self-narrating ransomware shutdown computers worldwide, altering the course of events in the real world of international security.

The malware, known as WannaCry, was allegedly engineered and distributed by the National Security Agency's (NSA) ‘Shadow Brokers’ group, according to a recent New York Times report.

The malware, which hits the world’s computer networks every few months, is a variant of a well-known family of cyberattacks, and it is the largest of such attacks to date.

The malware has caused widespread panic among governments and organizations around the world, with security experts warning that it could be used for more serious purposes, including political and military gains.

The WannaCry attack began on May 12, 2017, spreading rapidly across global networks, infecting computers in over 150 countries.

The damage caused by WannaCry is estimated to be in the billions of dollars, with some experts predicting that the total cost could reach several trillions of dollars.

The malware targets a particular version of the Windows operating system, specifically Windows Server 2012 and Windows 8.

The WannaCry attack was not unique, as similar attacks have been seen in the past, but the scale and speed of this one are unprecedented.

The WannaCry attack was a wake-up call for the world, reminding us that the数字 space is not immune to traditional threats and that we must remain vigilant.

On the other hand, the WannaCry attack also highlighted the lack of preparedness and response to cyber threats, particularly in developing countries.

The WannaCry attack was a reminder that we need to invest more in cybersecurity and that we need to develop better response mechanisms to such attacks.

The WannaCry attack also raised questions about the role of the United States in the global cybersecurity landscape.

Mr. Trump, in the final days of his administration, dismissed the FBI director, James Comey, with this line: "What we were doing was perfectly legal and appropriate. with all the former intelligence officials, and former Bush administration officials, and former Reagan administration officials, their stories and stories were straight from the heart, and we were doing the right thing, doing lawfully and appropriately, as far as I was concerned."

The White House has since released the transcript of a conversation Mr. Trump had with James Comey in the Oval Office in the last days before his dismissal. The transcript shows Mr. Trump exercising considerable control over the FBI director, including his criticism of the former secretary of state, Hillary Clinton, unfairly in his investigation into her email server, ran from hot to cold. Mr. Trump appointed a new FBI director, Chris Wray, who has been praised for his professionalism and integrity.

Mr. Comey had wisely briefed members of Congress in the past week, telling them of his request to Rod Rosenstein, the deputy attorney general, for more agents to conduct a broader investigation. Mr. Rosenstein, it turned out, authored the memo that was used, The New York Times said, to "justify the firing of Mr. Comey." You don't need a master's degree in government to conclude that the firing was the direct result of Mr. Comey's rapidly widening investigation. As The Times concluded, "It is certain to fuel bipartisan criticism that President Trump appeared to be meddling in an investigation that has the potential to damage his presidency." Not just meddling, but attempting to quash, or at least undermine, the FBI's expanding probe.

For some time, Mr. Trump and administration officials have been trying to pressure the FBI to refocus its investigations on the endless stream of leaks to the news media that have embarrassed the president. The investigation into growing evidence of contacts and possible collusion between Mr. Trump's campaign and the Russian government is already much broader investigation.

That love fest ended in divorce last week when the president tweeted, "FBI Director Comey was the best thing that ever happened to Hillary Clinton in that he gave her a free pass for many bad deeds!"

What changed Mr. Trump's mind? Word from the president's high command at the Justice Department that Mr. Comey was requesting more resources for his expanding investigation into growing evidence of contacts and possible collusion between Mr. Trump's campaign and the Russian government. That love fest ended in divorce last week when the president tweeted, "Days before he was fired, James B. Comey, the former FBI director, asked the Justice Department for a significant increase in resources for the bureau's investigation into Russia's interference in the presidential election!

Mr. Comey had wisely briefed members of Congress in the past week, telling them of his request to Rod Rosenstein, the deputy attorney general, for more agents to conduct a broader investigation.

By Donald Lambro

The last straw

That was the last straw for the White House. Not only did Mr.Trump have to contends with investigations in Congress, but now with a much wider investigation by the FBI, with hundreds of additional agents digging into every contact Trump associates had with the Kremlin during the campaign.

The New York Times broke the story on Wednesday on its front page with this lead: "Days before he was fired, James B. Comey, the former FBI director, asked the Justice Department for a significant increase in resources for the bureau's investigation into Russia's interference in the presidential election!

Mr. Comey had wisely briefed members of Congress in the final days of his administration, dismissing the FBI director, James Comey, with this line: "What we were doing was perfectly legal and appropriate. with all the former intelligence officials, and former Bush administration officials, and former Reagan administration officials, their stories and stories were straight from the heart, and we were doing the right thing, doing lawfully and appropriately, as far as I was concerned."

The best and worst breads you can eat, ranked
By Jen Christensen

Bread is like a modern-day curse word. When you're trying to clean up your act or your diet, it's the first thing to go. But we love bread, don't we? And it's not just how bad it is for you, really. Turns out, it can be part of a healthy diet. All you have to do is eat the right kind. And that's where the science comes in.

It sounds simple enough. Yet choosing the right bread can be tricky and require some forwarded planning. There are plenty of options to choose from, so isn't that what sounds good? So which ones are actually good for you? From sprouted to whole and multi-grain, to gluten-free and 100 percent whole grain, there are a lot of them. So we did some dirty work to find out, it can be part of a healthy diet. At least so says Dr. Kevin Smith, associate professor of psychiatry at Harvard Medical School.

But when researchers from Johns Hopkins University in Baltimore, MD, sifted through nearly 10,000 meditation studies, they found that those addressed these issues and met their criteria for well-designed studies. Their findings, published in JAMA Internal Medicine, suggest that mindful meditation can help ease the symptoms of anxiety and depression in patients with severe mental illness (SMI), including schizophrenia, bipolar disorder and major depression, have a 53 per cent higher risk of developing cardiovascular disease, per the study. Those who have a bipolar disorder and major depression, have a 53 per cent higher risk of developing cardiovascular disease, per the study. Those who have a bipolar disorder and major depression, have a 53 per cent higher risk of developing cardiovascular disease, per the study. Those who have a bipolar disorder and major depression, have a 53 per cent higher risk of developing cardiovascular disease, per the study. Those who have a bipolar disorder and major depression, have a 53 per cent higher risk of developing cardiovascular disease, per the study.

Effective home remedies for bad breath

Regular dentist visits and proper oral hygiene are critical for a healthy mouth. But the truth is, it's recommended you can do your part to fight bad breath. When your mouth doesn't have enough moisture to produce saliva, odor-causing bacteria can develop. Side effects from certain medications, medical conditions and diseases can deplete your saliva of that necessary moisture, but not getting enough water can also contribute to dry mouth in otherwise healthy people. That's why it's so important to be proactive, particularly before and after heavy exercise, or if you need to wear contact lenses in your mouth. While it's a healthy practice in and of itself, mouthwash can be used as an easy addition to your daily dental care and visits. So adopt these simple tips to help treat bad breath.

Hydration

Drinking enough water is one of the simplest steps you can take to curb bad breath. When your mouth doesn't have enough moisture to produce saliva, odor-causing bacteria can develop. Side effects from certain medications, medical conditions and diseases can deplete your saliva of that necessary moisture, but not getting enough water can also contribute to dry mouth in otherwise healthy people. Effects of mindfulness meditation on mental health

Mindfulness meditation may ease anxiety, By Julia Corriss

My mom began meditating decades ago, long before the mindfulness practice that has come to be known in the Western world. Over time, my mom brought us all along, teaching us the basics of meditation and encouraging us to practice regularly. I started meditating regularly when I was in college, and I've found it to be a wonderful way to relax and clear my mind before I go to sleep. I always feel more focused and centered after a good meditation session.

But when researchers from Johns Hopkins University in Baltimore, MD, sifted through nearly 10,000 meditation studies, they found that those addressed these issues and met their criteria for well-designed studies. Their findings, published in JAMA Internal Medicine, suggest that mindful meditation can help ease the symptoms of anxiety and depression in patients with severe mental illness (SMI), including schizophrenia, bipolar disorder and major depression, have a 53 per cent higher risk of developing cardiovascular disease, per the study. Those who have a bipolar disorder and major depression, have a 53 per cent higher risk of developing cardiovascular disease, per the study. Those who have a bipolar disorder and major depression, have a 53 per cent higher risk of developing cardiovascular disease, per the study. Those who have a bipolar disorder and major depression, have a 53 per cent higher risk of developing cardiovascular disease, per the study. Those who have a bipolar disorder and major depression, have a 53 per cent higher risk of developing cardiovascular disease, per the study.

Severe mental illness linked to much higher risk for cardiovascular disease

An international study of more than 3.2 million people with severe mental illness reveals a substantially increased risk for developing cardiovascular disease compared to the general population.

Led by Kings College London, the research shows that people with severe mental illness (SMI) bear much higher risk of developing cardiovascular disease (CVD) than people without severe mental illness (SNI). The study found that people with SMI had an 87 per cent higher risk of CVD than the general population, and an 82 per cent higher risk than people without SMI. The findings are published online in Psychiatry and Psychological Medicine.

Published online in Psychiatry and Psychological Medicine, these findings highlight the importance of regularly screening SMI patients for cardiovascular disease, including heart disease, heart attack and stroke. The study suggests that people with SMI have a higher risk of developing cardiovascular disease, including heart disease, heart attack and stroke. The study suggests that people with SMI have a higher risk of developing cardiovascular disease, including heart disease, heart attack and stroke.

It’s not over, WannaCrypt0r 2.0 ransomware just arrived with no ‘kill-switch’

By Swati Khandelawat

Criminals have just launched WannaCrypt0r 2.0 with no ‘kill-switch’ functionality. WannaCrypt0r has already infected over 200,000 computers worldwide in just two days, and now this latest wave can take over hundreds of thousands of unpatched computers without any way to stop it.

For those unaware, WannaCrypt0r is an massively fast-spread-ransoming malware that takes a Windows executive and exploit to target a computer running on unpatched Windows and servers, and then spread itself like a worm to infect other vulnerable systems in the internal network. The SMS text of the attacks was identified as ETernality, a collection of hacking tools allegedly created by the NSA and then allegedly dumped by a hacking group calling itself “The Shadow Brokers” over a month ago.

The researchers known as MalwareTech, accidentally halted the global spread of WannaCrypt0r by registering a domain name hidden in the malware, but it does not repair computers that are already infected. That domain was responsible for keeping WannaCrypt0r propagating and spreading this latest wave. “When we registered the domain in question, and created a sinkhole – tactic researchers use to redirect traffic from the infected machines to a self-controlled system,”

If you are thinking that activating the kill switch has completely stopped the infection then you are mistaken, because as the attack continues, it is spreading to new machines. According to researchers, this technique is likely to only last until the first week of June and may cause further problems next week.

In the second week of June, the malware will spread to new targets and begin to find new ways to spread itself. This is the only time when the malware will be vulnerable to attack.

Cordova, the creator of global research and analysis team at Kasparek Lab, has confirmed the arrival of WannaCrypt0r 2.0 variants without kill-switch functionality. So, expect a new wave of ransomsacks attacks, with an updated WannaCrypt0r variant, which would be difficult to stop once it hits other vulnerable systems get patched.

Instead of depending upon mass email spamming, just like an ordinary malware campaign, WannaCrypt0r (global attack) leverages SMB exploit to remotely hijack vulnerable computers just by scanning every IP-address on the Internet. Even after encrypting many of the domains and websites on the Internet and media, there are still hundreds of thousands of unpatched systems widely open available to the Internet. So, the new strain of WannaCrypt0r 2.0 malware would not take enough time to take over these systems as well as others connected to the same local network.

Microsoft took an unusual step to protect its customers with an unannounced version of Windows — including Windows XP Vista, Windows 2003 and 2008 — by releasing security patches that is SMB Fix currently being exploited by the WannaCrypt0r ransomware.

Even after this, I believe, many individuals remain unaware of the new patches and many organizations running on older or unpatched versions of Windows, who are considering to upgrade their operating systems, would take time as well as it going to cost them money for getting new licenses.

So, users and organizations are strongly advised to install available Windows patches as soon as possible, and also consider disabling SMBv1, to prevent similar future attacks.

**Tsunamis could wipe out the remaining 62 Javan rhinos**

Javan rhinos used to roam widely throughout southeastern Asia, but poaching and habitat loss has reduced their numbers and range to just 39 individuals. Today, they are only found in Ujung Kulon National Park, on the Indonesian island of Java. New research suggests they may be even more vulnerable to extinction than thought.

Children will be able to color the sky a different shade for the first time in history. A company has announced it is turning the pigment into a new crayon, which it catchily dubbed ‘YInMn blue’ in reference to the elements which make up the mixture.

**Disentangling chloroplast genetics**

Proper DNA inheritance is essential for healthy cell growth and division. The same goes for the genetic material found in chloroplasts: the energy centers of all plant cells. Chloroplasts contain a small, circular, double- banded genome. The vast internal expansion of these banded, or circular, chloroplast DNAs (cpDNA) over the last 300 million years led to the formation of modern chloroplast DNAs. In general, the interactions between cpDNAs and nuclear DNA (nDNA) in the plant cell are complex and poorly understood.

**Oxygen in oceans takes a million years to replenish**

The depletion of oxygen in Earth’s oceans leads to a massive deterioration of its bottom and deep layers, a dangerous sign of an imminent biological and environmental crisis on marine life. Called anoxia, this time hazard has a period in a significant way was 181 years ago, leading to mass extinction of fauna and flora life at the time.

**Famed tree-climbing lions running low on prey**

A range of tree-climbing lions in Uganda manage to find and garner enough to survive, a new study found. The lions discovered that the rhinos, Uganda’s most abundant big herbivore, catch their three main sources of nutrition: foliage, charcoal for evidence of wildlife, which would be more common in times when oxygen was more plentiful. And they found (presumably) the owners after the anoxic event, lasting for about 800,000 years.

**BIM Opens L/C, Worth $11b, for Industrial Project in Country**

Bank of India & Mine (BIM) opened $11 billion worth of letter of credit (L/C) from 2013 to 2015 for industrial projects in the capital goods sector. The L/C was offered to all the Public Relations Dept. of the bank.

**AYANDEH BANK to Back SMEs, a Step towards Increased Production and Employment**

AYANDEH Bank will support small and medium-sized enterprising sectors and processing and generating employment, the Public Relations Dept. of the bank.

**Vaspet to launch l'anc 1b satellite in 113 or 114 m4 5 mission**

With the aim of the successful launch, SpaceX is clear to begin final launch preparations of the new satellite—called l'anc 1b—which it aims to loft the fourth of the ImarSat 5 series of satellites. The company is targeting a 50 thousand launch window in order to increase its revenue.

**IMDRo Host 1st Iran-Latin America Mining Cooperation Meeting**

The first joint meeting of cooperation opportunities between the industries of Iran and Latin America in the mining sector will be held in Iranian Mines and Mining Industries Development and Reorganization Organization (IMDRo) headquarters April 1, in Public Relations Dept. of the Organization.
**DEPT. OF ENVIRONMENT SEEKING LEGAL IMMUNITY FOR RANGERS**

The government in Iran is seeking legal immunity for rangers who suffer violence while protecting wildlife.

**Dead whale sculpture highlights the problem of plastic waste**

The picture depicts how a wolf, named Termeh, is taken from there with their parents, and get in touch with their normal school operating under the chief of the department of environment in the schools.

"Setting up nature schools nationwide is one of our policies to help children understand the environment and wildlife somehow," Abigail Aguilar, a research scientist at the University of California, Santa Cruz, said.

The survival of wolves is also threatened by deadly diseases, such as distemper, anthrax, and rabies. And unfortunately, knowledge of getting older is greater than that of wolves.

Wolves normally hunt old, young, weak, and diseased, such as distemper, anthrax, and rabies. And unfortunately, knowledge of getting older is greater than that of wolves.

A large wolf needs to eat an average of 2.5 kg of meat every day, but they can go for several days without food. Wolves are apex predators. Apex predators have a greater role in a healthy environment. Loss of apex predators end in collapse of the ecosystem. A new study said "The catastrophic decline around the world of apex predators such as wolves has led to a huge increase in smaller "mesopredators" that are causing major ecological and ecological disruptions."

**VIRTUALY INCAPABLE OF DEFENDING THEMSELVES**

Wolves are the wild members of the dog family, carnids, with glimmering yellow eyes and lean, muscular bodies. The 17 different species of canids include wolves, jackals, coyotes, foxes, and etc. Canids are native to every continent except Australia and Antarctica. All of them share a keen sense of smell and hearing and are carnivores. Wolves hunt live prey, which they kill with their sharp teeth. However, when a kill is made, it makes up for any such lean periods by weighing up to 9 kg in a large wolf. A large grey animal can keep a pack well fed for several days. During the time they are not actively hunting, wolves may rest near the carcass to defend it from scavengers.

But wolf attacks on humans are rare. There are no fully documented cases of unprovoked attacks on people by healthy wolves. However, wolves can and do attack livestock. Sheep and cattle are, after all, close relatives of the wolf's natural prey and yet far easier to catch and kill because generations of domestication have made them virtually incapable of defending themselves. They are large, easy, and provide plenty of meat, and are often penned in with no hope of escape. Even so, they rarely take more than the sight of a human to cause the wolves to abandon the hunt and run away.

**Habitat shrinking**

In the territory of anything from 20,000 to 13,000 sq. km, the exact size varying according to the wolves' number and quality of habitat. The dominant (or alpha) is responsible for initiating hunts or other movements. But sick and old wolves may cause danger such as attacking to livestock, etc. The wolf is the largest species in this family (Canidae). It ranges widely in every Iranian province and appears in two different colored ratios. In most regions in northern half of the country, it is large and usually grey which resembles a European Wolf. The other form is smaller and colored buff yellow, darkening to brown towards the spine and head. According to the book of complete fauna of Iran, this race has been seen in northwest, central and southwest Iran.

The wolves in Iran are not seriously endangered. However, the expansion of cities and intensification of farming have resulted in habitat loss. Although some wolves manage to live close to farms and on the edges of towns but in fact they have become scarcer. Remaining populations are widely separated and these threats are harmful because if we lose wolves, there would be no solution for controlling the population. Many species of herbivores and this may end in increasing disease, and so on.

**IN 46TH SCHOOL**

Iran inaugurates 46th nature school.

Children aged 3 to 12 can enroll in the school.

"Setting up nature schools nationwide is one of our policy which we are pursuing in association with private sector and environmental groups," Masoumeh Ettefaghi, the chief of the department of environment said during the inauguration ceremony. "The ministry of education also plays an important role in promoting such extraordinary activities," she added.

Nature school is not interfering with the normal school operating under Education Ministry's supervision, rather it is place for the children to spend their free time, get in touch with their parents, and get in touch with nature.
Global warming: The disturbing physics behind the "Chinese hoax"

Looking back over the millennia, we have been able to see a pattern in the relative heat and cold periods of our planet. This is especially true when comparing the past 10,000 years, which is a relatively short period. Over such a long period, the earth’s temperature has been influenced by many factors, including volcanic eruptions and variations in solar radiation. However, it is the accumulation of these factors that has shaped the current climate and is likely to continue shaping it in the future.

As a result of these orbital forces, the earth’s temperature is influenced by the gravitational effects of the moon and the sun. For example, the moon’s gravitational pull on the earth is responsible for the tides, which in turn affect the temperature and weather patterns on the earth. The sun’s gravitational pull on the earth is also responsible for the earth’s rotation, which in turn affects the temperature and weather patterns on the earth.

Benfica celebrate fourth consecutive league title in style

Dressing room sillies have become the established norm as football teams toast their success in the dressing room after the game. But Portuguese giants Benfica have taken it to the next level as they marked a fourth successive league title by taking a moped for a spin.
The ribbon-based club sealed a 38th title in their history after thrashing Vitória Guimarães on Saturday, and were clearly in no mood to hang around later that night. Portuguese international João Louléd led the celebrations in the dressing rooms as he spun around on a moped as his team-mates roared enthusiastically in a circle around him. The 33-year-old appeared to enjoy himself, chuckling to himself as he rode the moped towards the bus to take his side's championship celebration tour.

Real Madrid star tells Zidane he’s leaving to join Chelsea

The Spain international has been linked with a move to the Premier League in recent months. Chelsea and Manchester United are among the 24-year-old’s suitors. An approach is being considered for the striker’s signature. The player is reported to be available for a fee of up to £30m.

Hull relegated from Premier League after Crystal Palace rout

Hull City’s relegation from the Premier League was confirmed on Sunday as they suffered a 4-0 defeat to Crystal Palace at Selhurst Park. First-half goals from Wilfried Zaha and Christian Bentaleb, a Lula Milivojevic penalty and a second for Van Aanholt sealed the win for the home side to guarantee their survival, and that of Swansea City, while condemning Hull to a return to the Championship.

Why Djokovic feels ‘great’ despite Madrid Open defeat to Nadal

Novak Djokovic was left disappointed in his bid to defend the Madrid Open title following his defeat to Rafael Nadal in the semi-final on 13 May. The Serb says he will still take positives from his latest defeat.

Novak Djokovic was left disappointed in his bid to defend the Madrid Open title following his defeat to Rafael Nadal in the semi-final on 13 May. The Serb says he will still take positives from his latest defeat.

French president Emmanuel Macron is likely to meet the International Olympic Committee’s (IOC) evaluation commission on Tuesday in his race to host the 2024 Games, sources said on Sunday.

The 33-year-old appeared to enjoy himself, chuckling to himself as he rode the moped towards the bus to take his side’s championship celebration tour.

The Italian said he and his squad had “only just started” to do our work.”

“Now they know my idea, I know their idea, and we can improve,” he added.

Real Madrid agree Zidane contract while Barcelona make Blanc sweat

The 37-year-old was axed just 12 months later. Mourinho also extended his contract after his second season, leading into next season.

Mourinho has also extended his contract after his second year in charge at the Bernabeu.

The Portuguese boss has been linked with the vacant Inter Milan job, while there is speculation over the future of striker Diego Costa and playmaker Eden Hazard.

Iran’s freestyle team win Asian Wrestling Championship

The 2017 Asian Wrestling Championships were held at the KI Raja Bahadur Indoor Stadium, India Gandhi Arena, New Delhi in India from May 10 to May 14.

Indira Gandhi Arena, New Delhi in India from May 10 to May 14.

Indra Gandhi Arena, New Delhi in India from May 10 to May 14.

India claimed the title of the 2017 Asian Freestyle Wrestling Championship in New Delhi, India on Sunday.

The Iranian team won three gold medals, one silver and four bronzes in the competition, sealing the title with 73 points.

Japan came second with 55 points and Uzbekistan finished in third place with 49 points. Bahman Ehsanpour won a gold medal in the 63kg weight class after defeating Han Song Kim from North Korea.

Alireza Mohammad Karim seized a gold beating Uzbekistan’s Azamat Daukeev in 86kg.

Yadollah Mohammadiakazemi grabbed Iran’s third gold after defeating Sumit from India in the 125kg weight category.

Hossein Shahrad triumphed in a silver, being defeated by Majomedi Birakan from Uzbekistan in the 74kg.

Reza Ahn (76kg), Meisam Nasiri (86kg), Hamed Houssein Rashidi (76kg) and Bahman Temouyr (84kg) won four bronze medals in the event.

Iran’s Greco-Roman team had already won the title in the competition with 69 points, taking four gold medals, one silver and two bronzes.

The 2017 Asian Wrestling Championships were held at the KI Raja Bahadur Indoor Stadium, India Gandhi Arena, New Delhi in India from May 10 to May 14.

Persepolis midfielder Kamyabnia undergoes shoulder surgery

Persepolis’ Iranian midfielder Kamyabnia has been sidelined for up to eight weeks due to shoulder surgery.

Kamyabnia suffered an injury in the match against Shahjamegan on May 4 in Iran Professional League.

He underwent successful surgery in Tehran’s Bahman Stadium on Tuesday.

The 28-year-old player will miss two vital matches against Lekhwiya of Qatar in the AFC Champions League Round of 16, scheduled for May 21 and 23.

On June 26, 2015, Kamyabnia joined Persepolis football team from Rah Ahan on a two-year contract.

Kamyabnia has yet to extend his contract with Persepolis football team.

He scored Persepolis’ first goal of the 2016–17 season on 15 July 2016 in a 1–0 win against Saba.

Hamilton overtakes Vettel to win Spanish Grand Prix

Lewis Hamilton won the Spanish Grand Prix on Sunday after coming from behind to beat title rival Sebastian Vettel.

Hamilton started the race on pole but Vettel managed to get into the Ton One.

The multiple world title winners changed places again however when Hamilton managed to get past his German opponent on the straight at the Circuit de Catalunya.

It meant that the Mercedes driver closed the gap on his Ferrari rival to six points in the Drivers’ World Championship standings.

Ricciardo, Daniel Ricardos finished third.

Iran's “Noruz in Tajikistan” wins award at U.S. festival

**TEHRAN** — Iran's Documentary and Experimental Film wins award at U.S. festival

Iran's “Noruz in Tajikistan,” one of its productions directed by Mehdi Bemani, won an award at the 46th edition of the Islamic Film Festival, which opened on Sunday in Eugene, Oregon in the U.S.

The film, which has been composed by Esfand Zadeh, is a 70-year New Year celebration that begins on the first day of spring. It is observed in Iran, Tajikistan, Afghanistan and several other countries.

**Iran holds cultural programs in Baku**

**Baku** — Iran's cultural programs in Baku are aimed at promoting the country's rich culture and heritage.

A music group from Iran performed a traditional performance in Baku on Friday as they appealed for help from fans of the wizard Harry Potter.

**Photo festival on Shahnameh to be held in Iran, Dubai**

**TEHRAN** — A photo festival on the Shahnameh epic, featuring images of Iran's historical sites, will be showcased in an exhibition in Dubai.

The exhibition, which is a multinational, multi-sport event, will be running from May 12-24.

The festival has been organized to celebrate National Ferdowsi Day, which is observed on April 26 each year.

**Portugal wins Eurovision Song Contest for the first time**
