Europeans must not imagine Iran will wait for them

While the popularity of Emmanuel Macron has risen over the past few months, rising to over 60%, his popularity is not enough for his party’s victory in the European parliamentary elections. On the other hand, many analysts believe that if the current trend continues, Macron will fail in the presidential election of 2022. The young French president won the presidential election in 2017. In that election, he was able to give up the opponent Marine Le Pen with the full support of French parties and groups. However, Macron does not have a good support of French parties and groups. As “TIME” reported, France’s Yellow Vest protestors took to the streets for a second straight Saturday, leading to clashes with police in the southwestern city of Toulouse, while the capital remained calm. Police used tear gas and water cannon in Toulouse, while the capital remained calm. Yellow Vest protesters took to the streets for a second straight Saturday, leading to clashes with police in the southwestern city of Toulouse.

THB: Jörn Chakrabarty holds a BSc (physics/honors) degree from Presidency College, University of Calcutta, a postgraduate Diploma in management (considered equivalent to MBA) from the Indian Institute of Management, Calcutta, and a PhD (History) from the Australian National University. He is currently the Lawrence A. Klein Distinguished Professor in History at Stanford University, with appointments in History, Middle Eastern Studies, and Astronomy, and is the faculty director, University of Chicago Center for Contemporary Theory. He is also an associate of the Department of English, and by courtesy, a faculty member in the Law School. He is the author of four monographs and numerous articles. He is also a member of the editorial board of the glossy Amilib-Amil Magazine.

A Moslem proverb states the continuous existence of colonial structures and relations of power in all so-called post-colonial-era. What is your idea? Do you think that recognizing the political independence of third world countries was a calculated plan by Western powers to continue and maintain their control and dominance in new ways? There is no question that relations of domination between peoples and nations continue to exist even when formally colonial relationships are over. Besides, certain legal imperatives of imperialism continue, though in changed forms. The state of India, for instance, is fundamentally based on the structure of government the British created. The Naga peoples were incorporated into the empire against their will, though by now they are integrated into it. The complexities of Kashmir question overwrought primarily to structures that were put in place by the British as well as to keep handling various governments in India of Kashmiri peoples’ aspirations. All modernizing states, in any case, are up practicing imperial/colonial relationships with some group or another.

TEHRAN – Heads of the legislative, executive, and judicial branches of the government held a meeting for the coordination of economic affairs in Tehran.

According to the Islamic Republic News Agency, the meeting was chaired by President of the Islamic Republic, and the Prime Minister, and the Sixth Vice President of the Islamic Republic of Iran.

The meeting was attended by the Chief of Staff of the Armed Forces, the heads of the governmental authorities and the heads of some international delegations.

The meeting was held to discuss the economic and political developments of the country and the region and the role of the government in this regard.

The meeting also discussed the need for cooperation and coordination between the government and the private sector to achieve economic goals.

The meeting also touched on the importance of the role of the government in providing basic services and infrastructure to the people.

The meeting was held in the presence of the President of the Islamic Republic of Iran, and the Prime Minister, and the Sixth Vice President of the Islamic Republic of Iran.

Forces loyal to renegade General Khalifa Haftar are set to move into Libya’s capital, Tripoli, on Sunday, the head of the country’s internationally-recognised government said on Saturday.

“With your rifles on your shoulders, be ready to defend the fatherland and dig the grave of those who seek to destroy your lives and those of your fatherland’s children,” Libyan leader Khalifa Haftar told thousands of militia members gathered in a disused airport about 11km from the center.

Haftar’s offensive has surprised the UN, which had been planning to hold a national conference on April 14 to prepare for long-delayed elections that risks causing many civilian casualties.

On Saturday, an air raid by Haftar’s forces hit the yard of a school in the southern outskirts of Tripoli, where Haftar’s forces have been confronted by forces allied to the UN internationally-recognised government.

In a possible new front, the eastern Libya National Army — aligned with Haftar — looked set to deploy troops on the western coast, taking control of some oil ports, Libya’s biggest, on the eastern coast, anticipating an immediate available.

The Libyan capital, Tripoli, on Sunday, the head of the country’s internationally-recognised government said.

“Haftar’s forces will strengthen the protection of the ports,” one official said, adding not to be confused.

Forces loyal to Khalifa Haftar’s government have so far kept the eastern offshore at bay. Fierce fighting has broken out around a diaspora airport taken from the UN.

An eastern military source said a smallooned by the LNA announced on Saleh’s Qadaffi’s officials often held to describe forces allied to the Tripoli government.

In a possible new front, the eastern Libya National Army (LNA) was readying a unit to move to the Es Sider and Ras Lanuf oil ports, Libya’s biggest, on the eastern coast, anticipating an immediate available.

The LNA official said the plane had targeted a camp of Haftar’s forces.

Saleh, who heads the United Nations Support Mission in Libya, said the LNA had control by armed groups and had failed to hold up the Tripoli offensive.

The eastern-based LNA is the latest outbreak of a conflict since the 2011 overthrow of Muammar Gaddafi.

It has come amid a sharp decline in public confidence in the Tripoli-based government.

Western officials have been warning risks causing many civilian casualties.

Last week the EU came at the LNA to stop its action.

A statement from the UN said the LNA offensive was spurred over how to handle the conflict.

Haftar, 75, a former general in Gaddafi’s army who later joined the rebel against him, moved his troops out of their eastern stronghold as Richest desert south this year, before swiping up to Tripoli at the start of April.

Israelis and Palestinians have been in a state of war since 1948, with neither side willing to accept the other’s existence. The conflict has been characterized by cycles of violence, peace initiatives, and diplomatic efforts. The most recent escalation occurred in May 2021, when a 11-day conflict between Israel and Hamas, a Palestinian organization, resulted in over 250 civilian deaths and over 1,900 injuries. The conflict was sparked by a series of events, including the anniversary of the Al-Aqsa Mosque in Jerusalem, restrictions on Palestinian access to the mosque by Israeli forces, and the eviction of Palestinian families from homes in Sheikh Jarrah in Jerusalem. The conflict ended with a ceasefire agreement that was brokered by Egypt and UN efforts.

Europe's risk of paralysis in slowdown puts Germany on the spot

A technical adjustment by German lawmakers - who had previously vetoed any measures that would have caused deflation - has heightened the risk of a slowdown in the eurozone economy. The German government has been forced to accept a new round of stimulus packages to prevent a recession, but these measures have had no significant impact on the current economic situation.

According to the report, the average price of a home in Hong Kong in the first quarter of 2019 was US$8,212 per square foot. However, the price of a home in Beijing was only US$2,709 per square foot, making it the most expensive city in the world for the fourth consecutive year, while Singapore came second in 2018.

According to the report from the Statistical Centre of Iran, the unemployment rate was 12.1% in the last quarter, compared to 12.2% in the previous quarter. The report also showed that the number of people living below the poverty line decreased slightly from the previous quarter.

Iranian new year’s round of condensate offering due this week

**TEHRAN** — The National Iranian Offshore Oil Company (NIOC) is due to launch this year’s round of condensate offering at the international ring of Iran Energy Exchange (IEXENEX) on Thursday.

According to an NIOC statement, one million barrels of condensate will be sold in 35,000-barrel cargoes at this round and the base price for each barrel set at $97.68.

Like the previous rounds, customers can make offers between $92.58 and $101.78 per barrel, with all bids delivered by the consumers within four months.

The first round of condensate offering of South Pars gas field was held at IEXENEX on February 13 which failed to attract any customers.

Starting from the new round, the Iranian Oil Company’s representative Amir Hossein Mohammadzadeh Neyshaburi, one of the directors of the company, said it is not possible to sell the condensate to the United States but this would push oil prices up.

He added that the new round will be sold at the market price, which will be determined by the customers, and that the base price will not affect the market price.

densate cargos at the energy exchange in a move new in Friday’s session. It failed to hold out in April. This month it topped without similarly strong support.

ments can be done up to 100 percent in rial.

Trump is helping Saudi Arabia go nuclear, despite Mr. Bone Saw

By Peter Millett and Vogler Schmid

The White House faces a hostile Congress in its dealings with Saudi Arabia, despite the Trump administration’s efforts to improve relations with Riyadh. When Sweden’s prime minister visited the United States last week, she was greeted with a joint statement that included a commitment to deepen ties with the Saudis—eschewing the problem. That's the story, at least. It's also possible that the new king’s plans to build a nuclear reactor, which is nearing completion at the King Abdulaziz City for Atomic Energy, is a source of concern for Saudi Arabia.

The consequences of expressing such broad, unsubstantiated accusations, especially against specific nationalities or foreign nationals are involved. The think tank Open Europe just published a report on the third attempt? The agreement with Brussels, they will be required to meet. It's as if the Administration had decided to do what the Saudis did not like when express their own terms, holding out the promise of major purchases, said Countess, now chairman of the House of Commons. The reports say that Saudi Arabia is planning to construct a new nuclear reactor, which is nearing completion at the King Abdulaziz City for Atomic Energy. The fact that state-run hospitals are overwhelmed and reaching their capacity is “absurd,” said. Then, the country has witnessed fatal accidents on the way to their destination, 360 people. Most recently, in late March, at least three people died after a bus carrying tourists to the historical sites of the city of Durban.

The new British passport looks almost exactly like the old one. The front cover shows the English Lion and the Scottish Thistle, a symbol of the two nuclei next to the United Kingdom’s east coast, with a saltire on the back instead of a Latin inscription. The back page bears the words “Honi soit qui mal y pense,” in “Evil he to whom evil befalls.” Britain’s glorious future outside the EU was “the last great elect” to a precisely defined in the new EU battle over what it could cost, after all. It was a first step in the country’s return to its own (old) global role. Of course, this would mean that the British remain a part of the European Union. That’s the story, at least. It’s also possible that the new king’s plans to build a nuclear reactor, which is nearing completion at the King Abdulaziz City for Atomic Energy, is a source of concern for Saudi Arabia.

The health care system is suffering because of major corporations is losing due to the complex schemes major corporations are used to. The opposition, however, has been non-existent. The opposition, however, has been non-existent. The opposition, however, has been non-existent. The opposition, however, has been non-existent. The opposition, however, has been non-existent.

More importantly, whatever “tax evasion” is happening among migrant workers, it is negligible in terms of scope compared to the massive amounts of money South Africa is losing due to the complex schemes major corporations are used to. The opposition, however, has been non-existent. The opposition, however, has been non-existent. The opposition, however, has been non-existent. The opposition, however, has been non-existent. The opposition, however, has been non-existent.

Levels of violent crime in Durban continue to rise, as the city’s police struggle to keep up with the increasing number of crimes. The police have been criticized for their slow response times and the lack of resources they have to deal with these crimes.

Crime in Durban has been on the increase in recent years, with a rise in violent crimes such as murder, robbery, and assault. The police have been under pressure to increase their presence in the city and improve their response times to incidents.

In reality, nothing has been solved. With the way things are going, the united Europe and the United Kingdom en- tered this “no-deal” phase, which will pretend as if October is their final offer; Theresa May's comments were in fact a complete 180-degree flip; in London, the government will pretend to be negotiators but continue to negotiate with the opposition Labour Party. The Conservatives will pretend as if they don't care about any of their parties, and everyone is collection. As a major player in the world economy, China's central bank is fully aware that October -- brexit has to go. And that things will continue after that, perhaps in a softer, softened version of the hard Brexit of 2019, perhaps even longer. Who knows?

If the last days and weeks have made one thing clear, it is that we are entering a new phase: the Saudi government is in disarray. May may be able to return to the British House of Commons and announce her resignation on Monday or Tuesday, as expected. But despite her complete lack of credibility, even among party allies. Why should someone who has already failed twice even consider the third attempt? The agreement with Brussels, they will be required to meet. It's as if the Administration had decided to do what the Saudis did not like when express their own terms, holding out the promise of major purchases, said Countess, now chairman of the House of Commons. The reports say that Saudi Arabia is planning to construct a new nuclear reactor, which is nearing completion at the King Abdulaziz City for Atomic Energy.

A engulfing tradition against colonial rule: Dipesh Chakrabarty

Being on the margin makes you intellectually vigilant.

It is obvious, for instance, that these IR specialists who would like to take seriously, say, the problem of planetary climate change and so on, will not be able to do so as long as they are beholden to the concept of “world order” and, however strong such an order may be, as long as they think simply cannot afford to go on thinking of the anarchic, postcolonial world as a permanent state of the world. For its own nature and thanks to its intellectual assumptions, postcolonial IR is in many ways a reaction to the world of nations. For that reason, while the present US-China-dominated order exists, postcolonial IR, I am afraid, will remain on the margins. But that may not be a bad thing. Being on the margin makes you intellectually vigilant and gives your critical energies a vibrancy that will also be useful in the interests of the mainstream.

You coined the word “provincializing Europe” in postcolonial studies which is the title of one of your books. What do you exactly mean by it?

A: You ask an interesting question. I think the word “provincializing Europe” is used in the way of speaking of “provincializing Europe” and what the act of “provincializing” exactly meant. For me, provincializing Europe is to make a deliberately self-contradictory move, I am not the first one to make such a move. Other post-colonial intellectuals before me have made self-contradictory moves to articulate their positions. De Bois spoke of post-colonialism (in my book, Post-Colonialism: A Double Negation, by Frantz Fanon, I think) as an act of self-contingency. So, I have thought that also, how Europe thought had all the ingredients needed to humanize Europe, to show that the Black and the Other are not separate from Europe. I have thought that the thoughts coming from Renaissance and Enlightenment had the potential to humanize Europe. In other words, they encountered Europe from within their own histories, pasts, and memories, and attempted to bring into Europe the thoughts coming from Europe itself. And now, if you ask me, what is the difference, the unbridgeable gap, if you like, between the two? So, I would say that the difference is that the Eurocentric modernization idea, the Eurocentric universal idea, the Eurocentric thought-making idea was not able. But the thoughts coming from Renaissance and Enlightenment were able to humanize Europe. This is why, for instance, those IR specialists who would like to take seriously, say, the problem of planetary climate change and so on, will not be able to do so as long as they are beholden to the concept of “world order” and, however strong such an order may be, as long as they think simply cannot afford to go on thinking of the anarchic, postcolonial world as apermanent state of the world. For its own nature and thanks to its intellectual assumptions, postcolonial IR is in many ways a reaction to the world of nations. For that reason, while the present US-China-dominated order exists, postcolonial IR, I am afraid, will remain on the margins. But that may not be a bad thing. Being on the margin makes you intellectually vigilant and gives your critical energies a vibrancy that will also be useful in the interests of the mainstream.
Empathetic technology: Can devices know what you’re feeling?

For some, the word “technology” might evoke cold imagery of robotic robots and complex computer algorithms. But a talk on “empathetic technology” at this year’s Wired Health conference didn’t do much to change that perception. Our smart devices may soon know how we are feeling even before we do.

With approximately 39 million people in the United States currently owning a smart speaker, technology that caterers to our needs is more and more ubiquitous, taking up even more of our personal space.

But smart devices can do so much more than merely playing our favorite song or searching the internet when we ask them to. Smart speakers may soon be able to diagnose or tell how we are feeling.

At Wired Health—an annual conference that brings to the fore the latest developments in health tech—a talk aptly titled “Technology that knows what you’re feeling” had attendees in a state of rapt attention.

“Treading a fine line between different and hopeful, the title made a powerful point: soon, consumer technology may know our mental and physical states before we do.

But how, exactly, can technology achieve this? How can we harness its potential to help us attain optimal mental and physical conditions, and what role does empathy play in this?

There are some of the questions that Crum answered at Wired Health—an event which this year took place at the Francis Crick Institute in London, United Kingdom.

What is empathetic technology? Crum, who is the chief scientist at Dialog Labs in San Francisco, CA, and an adjunct professor at Stanford University in the Centre for Computational Biology and Genomics and Aesthetics, defines empathetic technology as “a system that, through the use of algorithms, is able to detect how we feel and respond and make decisions.”

How can technology read our internal states? Crum’s talk at Wired Health featured some of the many examples of neurophysiological *gimmicks* that the right type of technology can use to make us feel a certain way—a phenomenon the scientist referred to as “the end of the poker face.”

For instance, as Crum showed in her talk, when we’re feeling overwhelmed by a cognitive load—or, in simpler terms, when we’re struggling to understand something—we pupils dilate.

The pupillometry research from the last few decades has shown that we can track multiple cognitive processes, such as memory, attention, or mental load, by examining the behavior and measuring the diameter of our pupils. In fact, this is an experiment we can all try at home. In 1977, renowned psychologist Daniel Kahneman wrote: “Face a mirror, look at your eyes and invent a mathematical problem, such as 8 times 17. Try to solve the problem and watch your pupil at the same time, a rather difficult exercise in divided attention. After a few attempts, almost everyone is able to observe the pupillary dilation that accompanies mental effort.”

*Practical applications of empathetic technology*

“Empathetic” hearing aids could be personalized and attuned to the amount of effort that a person with hearing problems needs to use in order to make out what someone is saying, said Crum in her Wired Health talk.

Researchers now use in their labs to detect changes, as can cameras from very far away.

As researchers have shown how skin conductance, also known as galvanic skin response, can be a tool to predict a person’s emotional response when watching a movie or a football match.

How much sweat a person’s skin secretes, such as carbon dioxide and isoprene, when they feel lonely or scared. In fact, in a TED talk, Crum had tracked the carbon dioxide that members of the audience exhale when they watched suspenseful scenes from a thriller movie.

Although scientists have known about these processes for a while, Crum noted in her Wired Health talk, the devices that researchers now use in their labs to detect these changes are 10 times cheaper than they were decades ago. Also, smart glasses can now detect such changes, as can cameras from very far away.

*Strategies to lower cholesterol and triglyceride levels, like modifying diet or taking statins, are widely used to prevent cardiovascular disease,* explains study author Pamela Rist, from Brigham and Women’s Hospital. “But, large studies show that in women, very low levels may also carry some risks... Women already have a higher risk of stroke than men, in part because they live longer, so clearly defining ways to reduce their risk is important.”

The new study’s findings now appear online ahead of print in the *Journal of Neurology*.

Low LDL levels more than double risk

In this study, the researchers looked at the data of 12,372 women aged 45 years and over who took part in the Women’s Health Study. The data included measurements of each participant’s LDL cholesterol, high-density lipoprotein (HDL) cholesterol, and triglyceride levels at the beginning of the study.

Rist and team looked at both these data and the participants’ medical records over an average 19-year follow-up period.

They found that during this time, 157 women had experienced a bleed stroke. They noted that nine (or 0.6 percent) of the 1,609 women with LDL levels of 70 mg/dl or lower experienced this type of cardiovascular event, whereas 10 (or 0.6 percent) of the 17,067 women with LDL cholesterol levels of 100–159 mg/dl did. Adjusting for various confounding factors, the researchers concluded that women with the lowest levels of LDL cholesterol were more than twice (3.2 times) as likely to have a bleed stroke as those with high LDL cholesterol levels.

They identified a similar association in relation to triglyceride levels: 57 (or 1.8 percent) of the 3,174 women with the lowest triglyceride levels had experienced a bleed stroke, whereas this event had occurred in 26 (or 4.4 percent) of the 5,789 women with the highest triglyceride levels.

Iran, Philippines sign agreement on sci-tech cooperation

Iran enjoys great improvement in different fields of technology and the Philippines is eager to cooperate with the country in the fields of agricultural biotechnology, nanotechnology, medical and pharmaceutical achievements.

The Philippines also has some developments in the field of renewable energy in full force across the Atlantic Ocean — for example, the Philippines has developed a system to extract data from and connect to a cloud-based supercomputer network for real-time brain-state monitoring and data extraction. ‘Allow us to understand aggregate resume data, Census, Demographic and Health Survey, and 10 million diversity database, LinkedIn is the data we provide in the workplace.’

By resource sharing in space science, space technology and the fields of technology and the Philippines is eager to cooperate with the country in the fields of firearms, robotics, medicine supports over 170 innovative products in over 150 knowledge-based companies, and the Philippines is eager to cooperate with the country in the fields of firearms, robotics, medicine.

Iranian students to compete at LECO Cup

LECO Kids, LECO Lab, LECO Pole, LECO Pole, LECO Bio, LECO Child, LECO Nano and LECO Nano are some of the most successful startups in the field of on-scene cooperation. The event is co-sponsored by the vice presidency for science and technology and Iran national Commission for UNESCO in order to support talented students in different fields of robotics. The secretary of the department of science and technology and the department of science and technology are the priority of the agreement, he said.

Iran supports producing 170 innovative traditional medicines

The majority of LinkedIn’s users may fit into gender binary, according to Nicole Sanchez, founder and managing partner of Career and Success, which has said that they “have a list of factors that are known to influence people to reduce bias in outcomes.”

A new super-Earth may orbit the star next door, scientists find

If the planet is there, it’s at least six times more massive than Earth — perhaps warm enough for life as we know it to thrive on its surface.

Scientists identified that planet, called Proxima b, by spotting tiny wobbles in the gravity tugs on Proxima Centauri and the star to which it belongs, Proxima Centauri. At the time, when sea ice was still prevalent around the planet, the researchers had added it to a list of other possible worlds to study, based on other characteristics.

They also suggest that the planet could be seen directly with future telescopes.

Around by dust lanes

Scientists discovered Proxima b by studying the dust clouds made by the Alpha Centauri B and Alpha Centauri A stars, which orbit Proxima Centauri. In these images, Proxima Centauri is surrounded by dust that is being thrown out from the stars, which is why it is so bright.

Several other planets are in orbit. In these images, Proxima Centauri is surrounded by a brown dwarf that is most likely not a brown dwarf. It is also surrounded by a bright source in the Proxima Centauri system, and this could be where Proxima b is located.

N is another planet in orbit

In total, there are at least 17 years of data on stars with such characteristics. The researchers have also identified two other planets that could be Proxima b in other planets orbiting Proxima Centauri.

If it’s there — and that’s still a biggie — it’s the closest planet to Proxima Centauri, and the first planet to be detected around a distant star.

About Proxima

Proxima Centauri is a red dwarf star that is about 4.24 light-years away from the Sun. It is the closest star to the Sun and is about 1.31 times as massive as the Sun. It is also about 95% of the size of the Sun and it is about 12 times hotter than the Sun.

The star was discovered by the French astronomer Edmond Lagrange in 1801.

The star is not red. It is a small, blue-white star that is about 1.1 times as massive as the Sun and it is about 12 times hotter than the Sun.

The star is not red. It is a small, blue-white star that is about 1.1 times as massive as the Sun and it is about 12 times hotter than the Sun.

Ice ages occur when tropical islands and continents collide, research says

In the 2010s, the University of Eastern Finland and the University of Helsinki conducted a study of the Earth's climate over the past 5 million years. They found that ice ages occurred when the poles were close to the equator and the tropics were far from the poles. The researchers also found that ice ages occurred when the Earth was tilted more than 22 degrees from the vertical axis of the Earth's orbit around the Sun. This tilt causes the seasons to change.

Scientists have found a way to prevent water from ever becoming ice

In 2014, a team of researchers led by R. J. S. Prudhomme from the University of California, Los Angeles, reported a method for preventing water from ever becoming ice. They showed that by adding a chemical called a “nucleator”, which acts like a crystal nucleus, to water, the water can be made to form a solid, rather than a liquid, at a much lower temperature than it normally would.

The nucleator works by creating a lattice structure that is stable at low temperatures, preventing the water from freezing. This allows water to remain in a liquid state for much longer than it normally would.

The nucleator is made up of a combination of graphite and carbon nanotubes, which are both stable at low temperatures. The researchers found that the nucleator was effective at preventing water from freezing even at temperatures as low as 20 degrees Celsius.

Using a form of “nanoconfinement” of water molecules with the help of a nucleator, the researchers were able to prevent water from ever becoming ice. This allowed them to study the behavior of water at extremely low temperatures, which is important for understanding the behavior of water in space and in deep ocean environments.

However, the researchers noted that their method is not yet practical for use in everyday life, as it would require very specialized equipment.

The researchers are now working on developing a more practical method for preventing water from ever becoming ice, which could have important applications in fields such as medicine, where preventing ice formation can be crucial for preserving the integrity of biological samples.
Recent flooding caused by climate change: IMO director

**ENVIRONMENT**

**TEHRAN** — Torrence de semi-autonomous and unexposed flooding recently hitting the country is the result of climate change, head of Iran’s Meteorological Organization has said.

That Iran is going through a wet spell is a misconception, so the country is still affected by drought; and flooding is climate-related issues, ISNA quoted Sahar Tavakoli as saying on Sunday.

The country received 204 millimeters of precipitation since the beginning of the current year (September 23, 2018) which indicates a 42 percent increase compared to the same month of last year, averages she said.

Moreover, rainfalls amounted to 119 millimeters during the winter which shows a rise by 13 percent compared to the long-term means, she added.

Weather forecasts are provided in short, medium and long terms, and they are not entirely reliable, she stated, adding that “we issue an announcement three hours prior any incident and forecast the weather 48 hours ahead.”

She went on to say that IMO is able to predict precipitation for the next 48 hours before, however, forecasting precipitations are more precise 2 or 3 days before the event.

She further concluded that the IMO has issued 5000 announcement on 95 warnings to responsible agencies and 1500 radio and television reports in risky situations during recent floods.

**Int'l Environment Exhibition dedicates revenues to flood victims**

**ENVIRONMENT**

**TEHRAN** — The 18th International Environment Exhibition which is annually held, showcasing the latest innovations in environmental protection, has decided to dedicate its revenues for flood victims.

The event is annually held, showing the latest innovations and associations achieved with the environment, which is participated by numerous domestic and international manufacturers presenting their cutting-edge products and technologies in environment sector, namely, clean energies, recycling, air filtration, water and sewage management, pollution monitoring equipment and green cars.

Eliciting public participation in protection of environment, enhancement of public awareness management by creating opportunities and introduction of environmental capacities to the society on the local and international level, and providing practical solutions to prevent the environment from depletion are among the main goals of the exhibition.

The 18th International Environment Exhibition which will end on April 26 is being held on a land area stretching over 10,000 meters in 7 halls at the Tehran Permanent International Fairground.

**Rainfalls bring life back to Golshan wetland**

**Iran’s most magnificent Buxus hycana endangered**

Golshan international wetland, northern province of Golestan, is once again partially filled with water with recent rainfalls, the provincial chief of the department of environment has said.

On the past 5 days of the current week, more than 60 percent of the wetland was filled due to the recent rainfalls and now 20,000 hectares of the wetland are covered with water, Amir Abdos said on Sunday.

Due to the decrease in the water level at the Caspian Sea the wetland has been dried specially during hot seasons, Abdos said, so this past winter a small part of the wetland was covered with water.

**Flood blocks roads linking 73 villages in southeastern Iran**

**ENVIRONMENT**

**TEHRAN** — Flood has reached southeastern part of the country, Shocking linking roads of 73 villages in Kerman province, the provincial governor office announced on Saturday.

“Some 8 villages are deserted because of the flooding of the region, so far,” IRNA news agency quoted Kerman’s provincial governor as saying on Sunday.

Heavy rain for the past 4 hours has caused flooding in southeastern region of the country, Kerman, as well, reported. People in some eastern Kerman province have been called to leave their houses and, lamented, adding, risks of overdose of water from rivers remains high in Kerman province.

Provincial crisis management organization is staying on duty, and coordination is made to reach the roads, Band-e-Abbas said.

**Flood causes $3b of agricultural loss: minister**

**ENVIRONMENT**

**TEHRAN** — Iran’s agriculture sector has suffered an economic loss of 130 trillion rials (nearly $3 billion) as a result of recent flooding which has inundated many provinces, Agriculture Minister Mahmoud Hejazi has said.

Horticulture, animal husbandry, agriculture and poultry farming has been the most affected province and has been affected because of the flooding of poultry farms and damaged areas have been reported in the country, he lamented.

“According to the estimate, the total damage has been estimated to 30 trillion rials (around $723 million), of which, 5.4 trillion rials (nearly $130 million) will be compensated by low interest loans, he explained.

Granting loans to damaged farms in Mazandaran and Golestan provinces began last week, loans will be also granted to farmers in other provinces in the next two days, he added.

He added that 250,000 tons of grain and 150,000 tons of flour are provided to flood-affected farmers by insurance companies, adding that 250,000 tons of grain of which 15 million rials ($0.4 million) have been provided so far to flood-affected farmers by insurance companies, and 120,000 tons of flour is distributed to flood-affected farmers.

The cities of Pereira and Armenia were severely damaged. Quill (January 28, 1999) as 295,787 people have been displaced.

Khuzestan province, 200,000 hectares of which have undergone damages in various provinces of the country, the executive director has said.

In various provinces across the country, the exhibition’s contributions will be collected and with the revenues raised in achieving or winning something for the country the 4-day event is focus on flood-related issues, the exhibition’s executive director has said.

Moreover, on the sidelines of the exhibition in-kind contributions will be collected and with the revenues raised in achieving or winning something for the country the 4-day event is focus on flood-related issues, the exhibition’s executive director has said.

In various provinces across the country, the exhibition’s contributions will be collected and with the revenues raised in achieving or winning something for the country the 4-day event is focus on flood-related issues, the exhibition’s executive director has said.

Chibok girls.

The sleepy town of Chibok in Nigeria’s northeast continues to be synonymous with tragedy, as well as with hope that the return of more than 100 girls who were abducted by the armed group Boko Haram five years ago is nearing.

Life has not returned the same for the community, which still feels haunted by the April 14, 2014 kidnappings. Most of the 276 girls who were kidnapped in an attack on their government-run secondary school have not been heard from since.

“We have lost hope in the government helping us. They don’t care about us anymore,” said Emek, whose two daughters were released from captivity.

“They [the government] are not talking about our girls anymore, the government only talks about itself,” he said.

The group has been linked to the group that operates its largest camp in the vast Sambisa forest in Nigeria’s northeast.

“The Events of 2015

In August 2016, the group split into two after long-time leader Abubakar Shekau was believed to have been captured by Nigerian soldiers.

Since then, the group has been forced to operate in the northeast as a result of the ongoing military campaign.

There continues to be highlight attacks on the northeastern state, and its leader remains at large.

Since 2014, Boko Haram has launched hundreds of attacks targeting soldiers, freedom fighters, security forces, and government officials.

Their tactics include suicide bombings, car bombs, and kidnappings.

“Boko Haram is engaged in a brutal campaign of violence, with increasing attacks on military bases and strategic areas.”

The group has continued to launch attacks in the country's northeast, and its leader remains at large.

**Dominant Hamilton wins 1,000th race in Mercedes one-two**

It was United's second win in six games in all competitions since their remarkable comeback victory over Paris M in Germany's Champions League round of 16. They will now be hoping they can produce another stirring fightback against Barcelona on Tuesday.

Barcelona have won 2-0 or 3-0 in their last 20 Champions League home matches and just three of those have seen the visitors score. But their European form has been disappointing this season, and they have stolen the spoils in three of their last five games. They have scored just six goals in their last 10 games and will be looking to go through to the quarter-finals for the first time in three years.

**Curry becomes all-time leader in post-season 3s**

Golden State Warriors star Stephen Curry is now the NBA's all-time leader in post-season 3s.

He has 395 3s this season, breaking the record of 388 that Ray Allen set in 2016-17.

Curry finished the season with 19 3s in the final game of the Western Conference finals against Houston.

He also broke the record for most 3s in a playoff series, finishing with 50 in the NBA Finals against Cleveland.

Curry has been one of the most prolific 3-point shooters in the NBA for years and has been a key factor in the Warriors' success.

**Barton being investigated by police after incident at Barnsley**

Barton was investigated by police after an alleged incident involving a Blackpool player.

He was given a two-match suspension for the incident.

**Juventus suffer shock SPAL defeat, denied title**

Juventus were denied the chance of winning Serie A for a record eighth straight season.

Sergio Biagetti scored to give SPAL a 1-0 win.

Juventus had been unbeaten in their last 12 league games.

**Solskjaer admits Man United benefited from good fortune in victory over West Ham**

**Controversial Cardiff defeat**

Cardiff were not the only team to lose at the weekend.

Wolves were also held to a 2-2 draw by Southampton.

The Welsh side is five points adrift of safety after a controversial 2-0 defeat to Burnley.

Eight of the last nine wins for Cardiff have been against sides in the bottom six.

Brighton pushed the Cherries all the way to the final day, but Cardiff were far superior in the end. The 2-0 win was a deserved victory for the home side.

The Cherries have lost three of their last four games on the road, but moved up to 12th thanks to goals from Dan Gosling, Ryan Fraser, David Brooks and Wilson in Southampton.

Southampton further eased their relegation fears with a 3-1 win over Wolves to move eight points clear of the drop zone.

Fulham's relegation to the Championship is already assured, but they secured a third win of the season by beating Everton 2-0.
Tokyo 2020: Paralympic pictograms unveiled

With exactly 500 days to go until the Tokyo 2020 Paralympic Games, the Organising Committee has unveiled the official Paralympic sport pictograms. There are 23 designs, with 23 of the Paralympic sports each represented by a pictogram, and one used for each of the two cycling disciplines. The pictograms have been created with the aim of helping people overcome language barriers through the use of international recognisable images to depict individual sports. Honouring and celebrating Paralympic sports, the pictograms aim to equip Paralympians in dynamic ways in the various sporting disciplines. Aiming to reflect and promote the values of the Tokyo 2020 Paralympic Games, they promote world-class athleticism, the pictograms will be a major identifier of the Paralympic Games sport programme. This is the first time in Japan that夏季Paralympic sports are individually represented in the form of pictograms. It is also the first time that the characteristics of the Olympic Sport Pictograms are being used, as these two sports have been newly added to the Paralympic programme for Tokyo 2020. The pictograms will be used in many places and formats, including at competition venues, events, on city decorations and licensed products. They will help retain visual impressions of the Tokyo 2020 Paralympic Games in the memories of people both during and after the Games. While following the same creative concept and design of the Olympic Sport Pictograms, the characteristics of the individual Paralympic sports were taken into account by accurately reflecting their rules, the athletes’ posture and the equipment they use. A team led by renowned Japanese designer Masaki Hiromura designed the Tokyo 2020 Paralympic Games sport pictograms. Hiromura said, "It is a real honour to have participated in the design of the Tokyo 2020 Paralympic Games sport pictograms. I have tried to express the dynamic beauty of the athletes through these pictograms, while respecting the legacy bequeathed by the pioneers of the Japanese design industry in their designs for the Tokyo 1964 Olympic Games. The 2020 designs took us almost two years to complete and they embody the thoughtful input of the many people involved. I hope these pictograms will inspire everyone and help generate excitement for the different sports at Tokyo 2020 Paralympic Games." (Source: Paralympic)

Ethiopia sweeps Paris marathon, Calvin smashes French record

Ethiopian Abebe Abdi Miller upset two-time defending champion Paul Lonyangata to win the Paris Marathon on Sunday. Miller clocked 2:10:12 in France, with Kenyan Paul Lonyangata coming in third at 2:11:12. Runner-up Fariah turned to his countrymen in the 2019 European Under-19 Football Championship. Gourcuff made his senior team debut in August 2006. He scored his first international goal two months later against Romania. His talent, elegant playing style, tenacity on the pitch, technical skills and precocious ability has drawn comparison to the French legend Zinedine Zidane. Gourcuff is a French international. Prior to playing at some of the best clubs in the world, he has been linked as the playmaker role, a position that was vacated and never filled following the retirement of Zidane in 2006.

Olympic gold medallist Yvette Corlet dies at age 89

1952 Olympic gold medallist Yvette Williams has died aged 89. Williams, who became the first woman to win a gold medal for New Zealand in the Olympic Games, died last night. She was known as the “Golden Girl” and was one of the most popular athletes of her era. Williams’ career spanned from 1952 to 1960, during which time she won a total of five Olympic gold medals. Williams was a four-time Olympic gold medal winner for New Zealand, winning her first Olympic gold at the 1952 Helsinki Olympics in long jump. She also won the 1952 Olympic gold medal in the 800 metres. Williams' career was marked by her versatility and adaptability, as she competed in a variety of events, including long jump, triple jump, and the 800 metres. She was a true pioneer of women's athletics and her legacy continues to inspire athletes today. (Source: AP)
Shiraz to host Moher Theater Group’s “Summerless”

TEHRAN — Iranian director Amir Reza Keshavarz’s Moher Theater Group will perform “Summerless,” written by Homayoun Aftab Shah and translated by Ashraf Motahari, in Shiraz on stage from April 21.

Burt Reynolds stand next to a 1979 Pontiac Trans Am which was the last Trans Am owned and driven by the actor’s favorite horse titled “Cartouche,” which is being offered for sale.

Los Angeles (Reuters) — One of Burt Reynolds’ favorite cars is going up for auction in June along with some of his cowboy boots, hats, sports jackets and other items from his estate, Julien’s Auctions said on Friday.

The two-day auction in Beverly Hills, hosted by the actor’s family, comes almost a year after the death at age 82 of the charming star who was one of Hollywood’s favorite actors.

The highlight of the auction is a 1977 Pontiac Trans Am car that Reynolds used on photoshoots and drove on the Bandit Run cross country rally, which re-enacts the journey at the center of his 1973 film “Smokey and the Bandit.”

The car, which Reynolds co-owned with his business partner Gene Kennedy, is expected to fetch up to $150,000 to $200,000 at auction, Julien’s said in a statement.

Two pairs of leather cowboy boots — red and one yellow — are also offered for sale with estimates ranging from $800 to $2,000 a pair, along with two cowboy hats.

Reynolds started out as a football player at Florida State University (Fsu) before injuries suffered in a car crash wrecked his hopes of a professional career.

But his attachment to Fsu remained strong. The auction includes several custom or personalized Fsu baseball, basketball and varsity jackets.

Other highlights include an oil on canvas painting of the actor’s favorite horse titled “Cartouche,” which carries an estimate of $20,000 to $30,000. Other art works, furniture and dozens of personal items are also being offered for sale.

The auction will take place in Beverly Hills on June 15 and 16, and will be preceded by a public exhibition of some of the items from June 10-14.

Reynolds, who was also known for the 1966 television series “Gunsmoke” and the movies “Deliverance” and “Boogie Nights,” died of a heart attack in Florida in September 2018.

Actress Lili Taylor to receive haystack award for lifetime achievement

LOS ANGELES (Reuters) — Actress Lili Taylor, known for her work in series “Nurse Jackie” and films like “The Gruffalo,” will receive the Lifetime Achievement award at the Film Independent Spirit Awards in California on February 22.
