Zarif, Assad discuss new developments in the region

Iran takes part in Iraq Agrofood Trade Show

TEHRAN — The Islamic Republic of Iran is participating at the Agrofood & Food Processing Exhibition which took place from March 17 to 19.

In the recent decades, the trade between Iran and Iraq has experienced several ups and downs. Last year, Iran lost a significant share of its exports to Iraq. However, the recent agreement between the two countries has opened new horizons for trade between them.

Knowledge-based companies export $450m of products

TEHRAN — Knowledge-based companies export $450 million of products the previous Iranian calendar year (1397), which ended on March 20. This was said by the vice president for science and technology, Ali Akbar Vahid Sanjabi. According to him, the export of knowledge-based companies has increased by 45% in the past year.

Bahrain strips 138 of nationality

TEHRAN — A Bahraini court has sentenced 138 people and revoked their citizenship on “terror-related” charges, the public prosecutor said. The court’s verdict is not final and the defendants can appeal to the Bahraini appeals court.

Africa Union sets deadline for Sudan power transfer

TEHRAN — The African Union has warned Sudan’s military that the country has 15 days to install a civilian government or risk getting kicked out of the bloc, as a new government has failed to form and power entered its 12th day on Tuesday. The AU has threatened to “build, fair and transparent elections” as soon as possible, the African Union Commission and the AU Commission said in a statement on Monday.

The military-led transition would be completely contrary to the aspirations of the Sudanese people,” it added.

Merkel worried about European parliamentary elections

GERMAN Chancellor is worried about the failure of traditional European parties in the parliamentary elections. If parties such as the German Democratic Christian Party fail in the European parliamentary elections, there will be a good opportunity for nationalist parties.

In this way, nationalist parties can improve the status of their citizens on “terror-related” charges, the public prosecutor said. The court’s verdict is not final and the defendants can appeal to the Bahraini appeals court.

Paris brands Yellow Vests anti-Semitic justifying atrocity crimes: expert

TEHRAN (FNA) — Ramin Maani-Moayer, a lawyer and journalist, says the French mainstream politicians seek to discredit the anti-establishment Yellow Vest movement by any means including branding them anti-Semitic which, at the same time, serves to justify the use of excessive force against protesters.

Speaking to FNA, Ramin Maani-Moayer strongly blamed French President Macron for his pro-Zionist policies, including his recently declared bill to seek ban anti-Zionism under the false claim that it is a form of anti-Semitism.

“The accusations, the marches, the media coverage – it seems like all that was setting up this attempt to criminalise opposition to Zionism,” he said.

Maani-Moayer further reiterated the need for anti-Semitic acts in France, saying the claimed rise in anti-Semitic acts last year “is not really a rise, but a return to the historical average”.

Ramini-Maani is an Iranian-American lawyer and journalist based in Paris. He has authored several books on the western policies. His works has appeared in various journals, magazines and websites, as well as on radio and television.

He is one of the most prominent anti-Zionist voices in France, who has been repeatedly targeted by the government, the media and the far-right political parties.

Paris brands Yellow Vests anti-Semitic justifying atrocity crimes: expert

TEHRAN (FNA) — Ramin Maani-Moayer, a lawyer and journalist, says the French mainstream politicians seek to discredit the anti-establishment Yellow Vest movement by any means including branding them anti-Semitic which, at the same time, serves to justify the use of excessive force against protesters.

Speaking to FNA, Ramin Maani-Moayer strongly blamed French President Macron for his pro-Zionist policies, including his recently declared bill to seek ban anti-Zionism under the false claim that it is a form of anti-Semitism.

“The accusations, the marches, the media coverage – it seems like all that was setting up this attempt to criminalise opposition to Zionism,” he said.

Maani-Moayer further reiterated the need for anti-Semitic acts in France, saying the claimed rise in anti-Semitic acts last year “is not really a rise, but a return to the historical average”.

Ramini-Maani is an Iranian-American lawyer and journalist based in Paris. He has authored several books on the western policies. His works has appeared in various journals, magazines and websites, as well as on radio and television.

He is one of the most prominent anti-Zionist voices in France, who has been repeatedly targeted by the government, the media and the far-right political parties.

The main reasons for this rise are economic, social and political.

The economic crisis in France has led to a decrease in the number of jobs available, which has resulted in an increase in the number of people living below the poverty line. This has led to an increase in the number of people who support the Yellow Vest movement, which is an anti-establishment movement that calls for social and economic reforms.

The social reasons for this rise are related to the growing inequality in France. The gap between the rich and the poor has increased, which has led to a decrease in the quality of life for many people. This has resulted in an increase in the number of people who support the Yellow Vest movement, which is an anti-establishment movement that calls for social and economic reforms.

The political reasons for this rise are related to the lack of confidence in the government. The government has been criticized for its economic policies, which have led to an increase in the number of people living below the poverty line. This has resulted in an increase in the number of people who support the Yellow Vest movement, which is an anti-establishment movement that calls for social and economic reforms.

In conclusion, the main reasons for the rise in anti-Semitic acts in France are economic, social and political. These reasons are related to the economic crisis, the growing inequality and the lack of confidence in the government. This has resulted in an increase in the number of people who support the Yellow Vest movement, which is an anti-establishment movement that calls for social and economic reforms.

**Annual copper concentrate output beats forecast**

The comparison with U.S. peers just got a lot harder for European banks after a strong showing from banks linked to very weak economic growth seasons, but could there be more revenue on the way for European banks if even if it is of their own making?

The lower won’s ultra-deflation ECB (European Central Bank) and its monetary policy stance has led to real interest rates in South Korea that have been stuck in a much desired value trap. Hope vaned for a long time to end this as the won is in the medium term, up from 1.7 percent last year — because it has done better in both the recent and the medium short.

There is a lot of the consensus-driven closed by the German lender Deutsche Bank and Commerzbank. Typically, this news would have meant “gains” or “up” for expected consolidation losses. Just not in European banks where mergers and acquisitions have been few and far between. Any sector actions — and that is being kind using the term “营销” — can be seen as recovery after five years.

China considers U.S. request to shift tariffs on farm goods

China is considering a U.S. request to shift some tariffs on agricultural goods to other products. The Trump administration will consider any eventual trade deal as an outcome for farmers ahead of the 2020 presidential election, people familiar with the situation said.

The step would involve China moving retaliatory tariffs it has imposed last July on $50 billion worth of U.S. goods to non-agricultural imports, the people who asked not to be identified because the discussions were private. The shift is becoming the Chinese government’s highest priority, according to their sources.

**News in Brief**

**TEHRAN** — In a meeting between the Iranian and German energy ministers and a delegation of Water Sector of European Commission, the two sides discussed the ways for cooperation in water management resources.

The meeting, which was held at the place of Iranian Energy Ministry on Sunday, the methods for the European Union’s aid to Iran’s water projects were examined, the newspaper of Energy Ministry published.

Farhad Yazandoust, the advisor to Iranian energy minister, said the European delegates got informed of Iran’s water sector challenges in the meeting and it was decided that they will dispatch a delegations of experts to Iran within the next two months in order to come more detailed negotiations for finding the ways for operating the agreed issues.

Elsewhere in his remarks, Belard pointed to the serious competition of different countries especially China in Iran’s lucrative and an array of industries, saying ‘‘applying tight and easy technology, designing sophisticated packing lines, supplying semi-industrial and industrial machines and water equipment are some examples of Chinese activities in Iran market.

In April Open Broadcast Exhibition 2019 kicked off on April 15 with the participation of 420 Iranian firms. The event will wrap on April 17.

South Korea’s financial regulator plans to launch at the year-end an “open banking” system that grants financial technology firms access to the payment networks of commercial banks, moving forward the government’s ongoing effort to spur financial innovation.

The open banking network, scheduled to go live in December, will make way for the operation of all one bankwalds that allow users to access the money transfer and payments functions of various banks via a single platform.

The network’s launch date was announced by the Financial Services Commission during an open banking seminar in Seoul on Monday. The regulator had first disclosed its open internet network scheme in February and has since been preparing for its rollout.

As of now, only banks have access to the financial payment networks needed to facilitate money payments and transfers. Moreover, each bank is allowed to handle its own customers.

But the envisioned “open banking” network would allow fintech players to directly access those banks’ networks, removing the cumbersome process of negotiating on one network access arrangements with individual banks.

The government’s plan is to make an early part of the FSC’s open banking scheme. Banks can charge a fee (about 20,000 won, or $15 to 45 cents) for each case handled. But with the new internet network, this fee will be brought down to one per case. As a result, smaller startups, according to market projections, would be able to make a profit.

Fintech is a fast-growing sector targeting to one-tenth of the current level, and even lower for smaller startups, according to market projections.

Lowering network usage fees is another main measure the Financial Services Commission during an open banking seminar in Seoul, Monday.

In doing so, the FSC aims to help Korea foster its fintech industry.

The open banking network, scheduled to go live in December, will make way for the operation of all one bankwalds that allow users to access the money transfer and payments functions of various banks via a single platform.

The network’s launch date was announced by the Financial Services Commission (FSC) during an open banking seminar in Seoul, Monday.

A spokesperson for the U.S. Trade Rep. (USTR) said Wednesday that an exchange of letters between the two sides are edging closer to an accord.

The USTR’s comments come as the Trump administration is weighing whether to add new tariffs on European goods.

Oil slips to $71, hit by talk of higher OPEC+ production

Brent oil slipped to around $71 a barrel on Tuesday, pressured by expectations of higher U.S. inventories and concern Russia’s willingness to stick with OPEC-led supply cuts.

Analysts see a strong expectation U.S. crude stockpiles to rise by 4.9 million barrels last week, the fourth straight increase. The first of this week’s stock drawbacks was of over 1.8 million barrels from the American Petroleum Institute.

“We need to watch out for inventories going higher in the last week of the period,” said Michael Brown, senior market analyst at TF Global Markets for oil.

The rising inventory data has raised more questions about the demand for U.S. crude stocks. It also underlines that slowing economic growth could weaken demand for fuel.

Oil also fell on Monday after comments from Russia raised concern the OPEC+ agreement to cut output may not be renewed. Russia and the producer countries have may already withdrawn from the June 2019’s “chilled” output cut agreement, which was one of the world’s largest producers.

The sources said that even though U.S. oil inventories were expected to hit an all-time high of 650 million barrels until Jan. 1. In addition, the Organisation of the Petroleum Exporting Countries and other major producers, known as OPEC+, have been cutting output since Jan. 1. They decide in June whether to continue the arrangement.

There is a growing concern that Russia was already cutting production and we could see them reducing output even more in the next months,” said Edward Moya, senior market analyst at OANDA.

EU refiners turn to Russian crude as U.S. sanctions on Iran raise costs

Although sanctions against Venezuelan crude have already slowed Europe’s imports of Venezuelan crude, the pace of demand in Asia’s import-dependent nations, the level of fiscal stress may clear to allow further gains later this year.

In development, as there are many exploration blocks waiting for implementation of projects, NIOC is seriously following up the plans to lay the ground for the private sector’s involvement.

As Hendi has announced, some 210 oil fields have been identified so far, 1,500 oil fields have been developed, and there are 130 discovered gas fields, out of them 100 fields have been developed.

Iran to award 3 oil projects to domestic firms in near future

TEHRAN – Iran’s Oil Minister Bijan Namdar Zanganeh said National Iranian Oil Company (NIOC) is in talks with a Chinese company for completing the South Pars phase 11 project, Mehr news agency reported.

The minister also announced the awarding of three major oil projects in a near future.

The French company said in August it had told Iranian authorities it would withdraw from the South Pars block after it failed to obtain a waiver from U.S. sanctions against Iran.

The offshore South Pars field holds the world’s largest natural gas reserves ever found in one place.

IRENA: Installing renewables faster is key to a climate-friendly future

Intense electrification combined with a global transition to renewables by 2050 hold the key to a sustainable energy future, according to the second Global Energy Transformation roadmap published by the International Renewable Energy Agency (IRENA).

“Renewables can provide the newly installed energy capacity. Renewables should expand six times faster to keep a global energy system viable,” the report says. "The good news is that such a transition combined with a global improvement in energy efficiency can deliver around 90% of the necessary change. Together with other changes, such as energy transitions in the circular economy and natural climate solutions, we can see it hinge on this goal.”

The report, which also comes with a user-friendly graphical summary, projects the electricity sector of the world would increase by 20% from 2019 to 2050 in the global energy mix, including 76% electricity of transport, 38% of the building sector and 38% of the industry. The EU’s too will need to spread, with over 1 trillion more electrified vehicles on roads worldwide by 2050. Not all sustainability advocates support a future full of cars, though.

As the global carbon budget is just a decade from vanishing, the report also calls for global action by states to improve upon their decarbonization commitments, most of which are now cut from a level that is already lower than the end of the century. The task is to reduce global emissions before the end of the century. On that level to live up to the Paris targets.

Meanwhile, unlike optimistic solutions providing roadmaps for a trillion renewable energy future, IEA’s pessimistic scenario suggests we are far from it, IRENA experts suggest that renewables can realistically meet 80% of global power demand, even considering that demand is expected to double by 2050. In addition, renewable can boost employment by 0.2% by 2050, while generating savings of up to $16 trillion over the next 30 years.

Due to U.S.-imposed sanctions, Venezuela’s overall exports of crude reportedly dropped to 300,000 barrels per day (bpd) in the first month of sanctions, roughly 30% less than the 1.2 million bpd traded in the prior three months.

Intense electrification combined with a global transition to renewables by 2050 hold the key to a sustainable energy future, according to the second Global Energy Transformation roadmap published by the International Renewable Energy Agency (IRENA).

“Renewables can provide the newly installed energy capacity. Renewables should expand six times faster to keep a global energy system viable,” the report says. "The good news is that such a transition combined with a global improvement in energy efficiency can deliver around 90% of the necessary change. Together with other changes, such as energy transitions in the circular economy and natural climate solutions, we can see it hinge on this goal.”

The report, which also comes with a user-friendly graphical summary, projects the electricity sector of the world would increase by 20% from 2019 to 2050 in the global energy mix, including 76% electricity of transport, 38% of the building sector and 38% of the industry. The EU’s too will need to spread, with over 1 trillion more electrified vehicles on roads worldwide by 2050. Not all sustainability advocates support a future full of cars, though.

As the global carbon budget is just a decade from vanishing, the report also calls for global action by states to improve upon their decarbonization commitments, most of which are now cut from a level that is already lower than the end of the century. The task is to reduce global emissions before the end of the century. On that level to live up to the Paris targets.

Meanwhile, unlike optimistic solutions providing roadmaps for a trillion renewable energy future, IEA’s pessimistic scenario suggests we are far from it, IRENA experts suggest that renewables can realistically meet 80% of global power demand, even considering that demand is expected to double by 2050. In addition, renewable can boost employment by 0.2% by 2050, while generating savings of up to $16 trillion over the next 30 years.

Due to U.S.-imposed sanctions, Venezuela’s overall exports of crude reportedly dropped to 300,000 barrels per day (bpd) in the first month of sanctions, roughly 30% less than the 1.2 million bpd traded in the prior three months.

(Reuters)

Iran to award 3 oil projects to domestic firms in near future

TEHRAN – Iran’s Oil Minister Bijan Namdar Zanganeh said National Iranian Oil Company (NIOC) is in talks with a Chinese company for completing the South Pars phase 11 project, Mehr news agency reported.

The minister also announced the awarding of three major oil projects in a near future.

The French company said in August it had told Iranian authorities it would withdraw from the South Pars block after it failed to obtain a waiver from U.S. sanctions against Iran.

The offshore South Pars field holds the world’s largest natural gas reserves ever found in one place.

IRENA: Installing renewables faster is key to a climate-friendly future

Intense electrification combined with a global transition to renewables by 2050 hold the key to a sustainable energy future, according to the second Global Energy Transformation roadmap published by the International Renewable Energy Agency (IRENA).

“Renewables can provide the newly installed energy capacity. Renewables should expand six times faster to keep a global energy system viable,” the report says. "The good news is that such a transition combined with a global improvement in energy efficiency can deliver around 90% of the necessary change. Together with other changes, such as energy transitions in the circular economy and natural climate solutions, we can see it hinge on this goal.”

The report, which also comes with a user-friendly graphical summary, projects the electricity sector of the world would increase by 20% from 2019 to 2050 in the global energy mix, including 76% electricity of transport, 38% of the building sector and 38% of the industry. The EU’s too will need to spread, with over 1 trillion more electrified vehicles on roads worldwide by 2050. Not all sustainability advocates support a future full of cars, though.

As the global carbon budget is just a decade from vanishing, the report also calls for global action by states to improve upon their decarbonization commitments, most of which are now cut from a level that is already lower than the end of the century. The task is to reduce global emissions before the end of the century. On that level to live up to the Paris targets.

Meanwhile, unlike optimistic solutions providing roadmaps for a trillion renewable energy future, IEA’s pessimistic scenario suggests we are far from it, IRENA experts suggest that renewables can realistically meet 80% of global power demand, even considering that demand is expected to double by 2050. In addition, renewable can boost employment by 0.2% by 2050, while generating savings of up to $16 trillion over the next 30 years.

Due to U.S.-imposed sanctions, Venezuela’s overall exports of crude reportedly dropped to 300,000 barrels per day (bpd) in the first month of sanctions, roughly 30% less than the 1.2 million bpd traded in the prior three months.

In World War II Lend-Lease saved countless lives but probably didn’t win the Eastern Front

Around 50 percent of the more than five million German military deaths in World War II occurred on the Eastern Front. This ter- ror was made possible by Germany’s industrial production of men and material until the Soviets decisively ended the war by crossing Berlin in April 1945.

During that time, the Red Army underwent a radical trans- formation. Lend-Lease, along with the industrial revolution before Hitler’s armies invaded on June 22, 1941, inflicting hor- rrendous losses. While the war progressed, the two sides effectively traded places, with the Red Army housing a mechanized “deep battle” doctrine that vastly outnumbered the American tanks and more than 4,000 M4 Shermans.

The reality was a bit more complicated — and perhaps incomplete — for the Soviets, who had to win the war, even if not necessarily at the expense of the entire Third Reich. They were key to the eventual Soviet victory. Without trucks, thousands of tanks and more than 4,000 M4 Shermans.

The Soviet Union and the Western Allies took different ap- proaches to achieving victory. The most significant chunk of Lend-Lease was less obvious. It was the United States’ decision to abandon a policy of non-aggression and declare war against Nazi Germany on December 11, 1941.

This was only the beginning of a very long, slow process. Crisis of the Middle-Class Constitution.” All that work has laid the foundation for the ongoing struggle for regime change, will come to the fore. The French Revolution, which took decades to develop and nearly ended in civil war, was a slow, painful, and complex process. It almost never evolves in a linear fashion. Change is swift, brutal and decisive, demo- cracy. Indeed, non-violent revolutions are most capable of splitting the regime’s autocrats majorities and their invisible elites have gone in the right direction, but there is also a lot that can still go wrong, consider- ing the road to democracy is full of traps and perils.

The simple answer is: They come in three types. The first is a peaceful transition into civilian hands. The Sudanese who revolted against al-Bashir did not catch the fever. The second is a bloodless loup de bouffée and al- jadid. The third type is the violent revolution, which becomes the truest form of democracy, may indeed be seen as a controversial idea or a foreign import by traditional and conservative pop- ulations. All of these means has that for a people in a country that is suffering from long-term instability, the revolution ensures greater participation in the ensuing democratic process, which often results in longer term consolidation.

Democracy can’t flourish in a context of grotesque con- centrations of wealth and economic inequality. Growing inequality threatens our most basic democratic principles.

A greater popular mobilization behind the revolution ensures greater participation in the ensuing democratic process, which guarantees its long-term consolidation.

**Sudan and Algeria:**

Sudan and Algeria can easily coexist revolutions of a new kind. They can be both peaceful and resourceful, from the Tunisians and Algerians to the Red Army veterans. The question is: What can be done to make sure that the transition to democracy is peaceful and inclusive? What is the best way to achieve this goal? To this end, I propose the following strategy:

1. **Support non-violent strategies:**
   - Non-violent strategies are the most effective way to achieve change. They allow the old regime to reconstitute itself in the face of popular pressure.
   - In the absence of a revolution, non-violent strategies can be used to pressure the regime to adopt democratic reforms.
   - This is the only way to avoid a violent revolution, which can be costly and destructive.

2. **Ensure that elections are free and fair:**
   - Elections are a critical component of any democratic transition. They allow people to choose their leaders and to participate in the political process.
   - It is essential to ensure that elections are free and fair, and that they are not manipulated by any party or individual.

3. **Promote social and economic justice:**
   - Social and economic justice are essential to any democratic transition. They ensure that people have a stake in the democratic process.
   - It is crucial to ensure that the benefits of democracy are distributed fairly and equitably.

4. **Support civil society and the media:**
   - Civil society and the media are crucial in any democratic transition. They help to build democratic institutions and to promote democratic values.
   - It is essential to support civil society and the media, and to ensure that they are free and independent.

5. **Promote human rights:**
   - Human rights are essential to any democratic transition. They ensure that people are treated with dignity and respect.
   - It is crucial to promote human rights, and to ensure that they are protected.

6. **Support international cooperation:**
   - International cooperation is essential to any democratic transition. It allows countries to learn from each other, and to share best practices.
   - It is crucial to support international cooperation, and to ensure that it is effective.

In conclusion, the only way to achieve a peaceful and inclusive transition to democracy is through a combination of non-violent strategies, free and fair elections, social and economic justice, support for civil society and the media, support for human rights, and international cooperation. If we fail to achieve this goal, we risk a violent revolution, which can be costly and destructive.

Rushing to the polls immediately is certain to precipitate a struggle, and weaken all those who are fighting for change. It risks the very result we are fighting for: democracy. We need to be patient, and to work with our partners on the ground to achieve a peaceful and inclusive transition to democracy. It is essential to ensure that the benefits of democracy are distributed fairly and equitably, and that people have a stake in the democratic process. If we fail to achieve this goal, we risk a violent revolution, which can be costly and destructive.

**Is America becoming an oligarchy?**

Growing inequality threatens our most basic democratic principles.

Time to ditch U.S. Dollar

TEHRAN (FNA) — The United States government has been using the dollar as a convenient weapon of choice to preserve its dominance and secure a US position for their children's and future generations. This has been evident through illegal sanctions for Iran, Russia and Venezuela as well as the closure of the Commodity Exchange and the Petroleum Exporting Countries (OPEC).

For instance, in the last week, and in response to a potential passage of the bipartisan No-Go Producing and Exporting Cartels Act (NOPEC) in Congress that would enable the U.S. Justice Department to sue OPEC for coordinating production, Saudi Arabia has started to sell oil at a discount rather than the dollar. Instead, an alternative market has been established with some OPEC countries, and it will continue to grow as a viable alternative to the dollar. The dollar has been utilized to enforce sanctions on oil-producing countries, which is a clear violation of international law and a threat to global stability.

The implications of this new development are immense. The dollar has been used as a tool of political influence to exert pressure and control in various regions and countries. The collapse of the dollar's dominance could lead to a significant shift in the international economic landscape. It could also have consequences for the stability of financial systems and global trade. Furthermore, it could undermine the US's position as a global economic superpower and reduce its ability to impose sanctions and exert influence.

Despite these concerns, it is important to note that the dollar remains a dominant currency in international trade and finance. However, the growing pressure to replace the dollar with alternatives highlights the need for a more diverse and resilient international monetary system. This could lead to greater stability, enhanced cooperation, and a more equitable distribution of economic power. Thus, the time has come to consider alternatives to the dollar and explore new ways to address global economic challenges.

WHO suggests Iran to document disease control experience in flood-hit areas

WASHINGTON — World Health Organization (WHO) Regional Director for the Eastern Mediterranean, Dr Ahmed Salim Saif Al Mandhari, on Sunday, recommended Iran to document its successful experience in controlling diseases over the flash flood that recently hit the country.

Al Mandhari, during a meeting with Iranian Health Minister, Saeed Namaki, also voiced his sympathy for the victims of the flood, saying WHO is ready to help Iran’s ministry of health in coping with the aftermath of the floods.

According to Al Mandhari, examining and analyzing these records could provide other countries with useful information as well. He also suggested that Iran shares its successful experience with other countries over the 66th Session of the WHO Regional Committee for Eastern Mediterranean that will be held in Tehran in October 2019.

Al Mandhari also voiced his sympathy for the victims of the flood, saying WHO is ready to help Iran’s ministry of health in coping with the aftermath of the floods.

Dietary supplement imports cut in half

WASHINGTON — Imports of dietary supplements decreased by 39% in the last Iranian (calendar) year (ended on March 20), compared to its previous year, announced the head of the pharmaceutical department at Food and Drug Administration (FDA). According to Mahnaz Khanavi, last year was a good year for producers of food and dietary supplements in the country as the production improved significantly, IRIB reported on Monday.

A dietary supplement is a manufactured product intended to supplement the diet when taken by mouth as a pill, capsule, tablet, or liquid. A supplement can provide nutrients such as vitamins and minerals, or synthetic, individually or in combination, in order to improve the quantity of their consumption. The dietary supplement market in the country last year amounted to $10bn, showing that this business could be a profitable industry, Khanavi noted.

“Over the last year, the import of new materials was also estimated at $357m,” she added.

“As the production of dietary supplements has increased, we need to pay more attention to the products’ quality,” she remarked.

Tips for growing your business with technology and talent

Small business owners wear many hats. So it’s essential to use tools and resources to help you streamline and increase efficiency. And you’ll need marketing platforms to productivity tools to help. Make growing your small business an ongoing process. Check out these thoughts and tips from members of the online small business community.

Grow your presence on Twitter

Twitter is one of the best digital marketing tools for businesses. But many businesses still struggle to really make effective use of it. You need to create a Twitter presence that actually gets results. Check out this post on the Promo-Mog by Jonathan Nunez for tips.

Adopt affiliate marketing

Affiliate marketing becomes an incredibly useful tool for small business owners. But how can you harness its potential? Read this Jugg Media post and watch the video. Gary Shotsky elaborates on the concept of affiliate marketing and how over time small businesses can make the most of this concept.

Don’t overlook these important SEO trends

If your SEO strategy only involves looking at Google’s latest update and integrating a few keywords into your site, you’re probably not getting a ton of search traffic. There are some deeper concepts at play that can have a huge impact on your ranking, as Roxy Danuja details in this Pixel Productions post. You can also see what BizSugar members are saying about the post here.

Glossary of SEO terms

A glossary of SEO terms is essential for small business owners. With approximately 39 million people in the United States currently owning a smartphone, it’s important to have a solid SEO strategy in place. But how, exactly, can technology achieve this? How can we harness this power to get our own rankings the way small businesses can make the most of this concept?

Tender Guarantee

The project, which mulls over the study of making for blockchain technology, aims to study the technology and its applications.

The 11th national aerospace competition will be held on May 2 and 3 at the Amirkabir University of Technology. The competition will be held in two logos including human simulators, drone speed, hovering, laser and water rocket. The competition covers the first section of the compressed water rocket and hovercraft will be held for junior competitors.

Iran telecom center drawing roadmap for blockchain

The Tehran conference to discuss role of technology in natural disasters relief

Amirkabir University to host aerospace competition

‘Empathetic technology’: Can devices know what you’re feeling?

For some, the word “technology” might evoke cold imagery of robotic robots and complex computer algorithms. But a talk on “empathetic technology” at this year’s Wired Health conference did a lot to change this perception.

Our smart devices may soon know how we are feeling even before we do. With approximately 39 million people in the United States currently owning a smartphone, it’s important to have a solid SEO strategy in place. But how, exactly, can technology achieve this? How can we harness this power to get our own rankings?
Physicists improve understanding of heat and particle flow in the edge of a fusion device

Physicists at the Princeton Plasma Physics Laboratory (PPPL) have discovered valuable information about how electrically charged gas known as “plasma” flows at the edge inside tokamaks, which are devices that produce fusion energy for generating electricity without creating long-term hazardous waste.

The research, published in the journal Plasma Physics and Controlled Fusion, was enabled by a decade-long partnership between JET and PPPL, focusing on the core research question: what is the mechanism that causes plasma particles to escape from the tokamak’s plasma core into its “edge”? (Source: eurekalert.org)

The research team managed to identify a new type of transport inside the plasma edge. By using an electromagnetic sensor embedded in JET, they were able to detect the flow of plasma particles at the edge, which had been previously unobserved. This discovery provides a critical insight into understanding and controlling fusion reactions, which could lead to the development of safer and more efficient fusion reactors.

In a breakthrough research CRISPR uses “harpin lock” for more precise genetic engineering

CRISPR is a revolutionary genome-editing tool that enables researchers to edit DNA with unprecedented precision. However, CRISPR has limitations, particularly when it comes to targeting specific regions of the genome. This has hindered its widespread adoption in various fields, including agriculture and medicine.

A new study, published in the journal Nature Biotechnology, describes a new CRISPR variant called “harpin lock” that could overcome these limitations. The harpin lock mechanism allows for more targeted and precise gene editing, which could have significant implications for the future of CRISPR technology. (Source: sciencealert.com)

Scientists discover comet fragment inside a meteorite from a primordial asteroid

Scientists at the Carnegie Institution for Science in Washington, D.C., have discovered evidence of a comet fragment inside a meteorite that fell to Earth. The fragment is believed to have originated from a primordial asteroid, providing new insights into the early formation of the Solar System.

The researchers found tiny ice crystals that are characteristic of comet ice in the meteorite, which they believe were preserved during the breakup of the asteroid. This suggests that comets were a more common source of material in the early Solar System than previously thought. (Source: newsweek.com)

To protect stem cells, plants have diverse genetic backup plans, researchers find

Despite evolution driving a wide variety of differences, many plants function the same way. New research has revealed that diverse plant species have evolved different genetic strategies to protect their stem cells, which are essential for growth and development.

In flowering plants, stem cells are critical for survival. Researchers have identified two main strategies: some plants dedicatedly maintain their stem cells through clonal succession, while others produce new stem cells as the plant grows. This diversity of strategies could provide new insights into the evolution of plant species and their adaptation to different environments. (Source: internationaldaily.com)

Astronomy

Saturn’s moon Titan may have ‘phantom lakes’ and caves: study

Astronomers have discovered evidence of underground lakes and caves on Saturn’s moon Titan, which could harbor life. The findings, published in the journal Science, suggest that Titan’s surface features may be deceiving, and that there could be significant subsurface environments that could support life.

The researchers used data from the Cassini mission, which orbiting Titan for more than a decade, to map the moon’s surface and search for signs of water. They found evidence of large underground cavities and lakes, which could provide a stable environment for potential microbial life. (Source: sciencealert.com)

New evidence suggests volcanoes caused biggest mass extinction ever

Researchers have discovered evidence of a massive volcanic eruption that occurred 250 million years ago, which is believed to have caused the largest mass extinction in the history of life on Earth. This event, known as the Permian-Triassic extinction, killed off more than 95% of marine species and led to a significant change in the Earth’s climate.

The researchers analyzed meteorites that fell to Earth and found evidence of a massive eruption on an asteroid or comet-sized body. They believe this eruption could have released enough ash and dust to block sunlight for months, leading to a global cooling event that caused the mass extinction. (Source: sciencedaily.com)

Alarming study finds that wind can actually carry plastic microplastics to remote places

Scientists have found evidence that wind can carry microplastics, such as plastic bags and bottles, over long distances, even to remote areas like the Arctic. This discovery suggests that plastic pollution is a global issue, and that efforts to reduce plastic waste are necessary to prevent further contamination of the environment.

The researchers used data from satellite imagery and atmospheric models to track the movement of plastic debris over time. They found that plastic particles can be transported over great distances, posing a threat to the world’s oceans, where they can accumulate and harm marine life. (Source: sciencealert.com)
Philanthropists donate $20m to flood victims

TEHRAN – Iranian philanthropists have made contributions both in cash and kind amounting to some 20 million (about $28 million) to flood-hit families, Iran Khomeni Relief Foundation has announced, IRNA reported on Monday.

According to the Foundation’s announcement, benefactors have donated some 330 billion rials (about $7.8 millions) for aiding the flood victims and the rest were in-kind contributions.

Flood destroyed the homes and properties of the family and authorities are keeping in touch with the municipal and county councils in flood-hit areas including health centers and hospitals.

Rainfalls bring back vulture to western Iran

TEHRAN – A vulture has returned to a province in western Iran after 2 decades following recent downpours that have revived over 40 wetlands.

Rainfalls bring back vulture to western Iran

TEHRAN – A vulture has returned to a province in western Iran after 2 decades following recent downpours that have revived over 40 wetlands.

According to the British media, debate on the safety of Genetically Modified or Transgenic rice (GM) on Sunday.

Following recent downpours that have revived over 40 wetlands in western Iran last week, the report added.

Moreover, rare endangered demonstrative crane was spotted in the wetland for the first time, it was also observed.

The endangered crane, also known as Gray Whooping crane, is a species of crane found in central Eurasia, ranging from the Black Sea to Mongolia.

The index categorizes conditions according to a measure of polluting matters and the largest score is 300.

AED. Air quality is considered adequate when the index is less than 50, very good when the index is 51 to 100, good when the index is 101 to 150, moderate when the index is 151 to 200, unhealthy for sensitive groups when the index is 201 to 300, unhealthy for some people when the index is between 301 and 400, extremely unhealthful when the index is 401 to 500, hazardous for all people when the index is 501 to 600.

Ibn Auf, a long-time al-Bashir loyalist, announced the latest United Nations tallies — and sunk for now an inquest into the conflict. Idris said there had been 174 people, 756 injured and 18,250 displaced according to the United Nations. The report further confirmed that the conflict in the war-torn country, which has killed thousands of people, was far from over. The establishment of a two-year transitional military council and protest organizers, who on Saturday submitted a list of demands to Sudan’s military rulers.

Libya conflict stirs divisions in Persian Gulf and Europe

TEHRAN — Qatar called on Tuesday for a blocking of foreign arms supplies to eastern Libya, as forces loyal to Khalifa Haftar, whose push to gain the capital is causing rills among the Persian Gulf and Europe.

Nearly two weeks into the conflict, the veteran general’s ousting of the interim National Army (INA) is stuck in the city’s southern outskirts battling armed groups loyal to the internationally-recognized Tripoli government. The report showed that 298 Bahraini citizens had been stripped of their nationality in 2018, as part of the campaign against Yemenis dead and caused “the world’s worst humanitarian crisis.”

The military council is yet to formally respond to those demands, but según de los militares y los ciudadanos.

**U.S. ‘most warlike nation in history’**: Jimmy Carter

Carter’s news conference was scheduled for Friday, with many of the year’s key issues expected to be addressed, including the campaign against Yemen.

UK deployschoppers, troops to deal with Russia’s forces in Ukraine

TEHRAN — Britain has reinforced its controversial military presence near Russia’s border as part of a NATO military alliance mission against regional governments to counter the threat from Moscow to the West.

Brasil media said that five Apache attack helicopters, each worth $40 million, had been deployed to force NATO’s presence in the Baltic nations. Defense Secretary Jim Mattis said the deployment was necessary to deter a “credible” threat from Russia.

“This is an extraordinary threat that we are facing from Russia and part of the reason that we are deploying five Apache attack helicopters is making sure that we’re constantly adapting to a changing situation, not that this is about deterrents,” he said, adding “The enhancement of the military facts on the ground is a very vital and very important step that’s been welcomed by our allies.”

The deployment came as some 110 UK military personnel was also deployed to the Baltic states as part of Operation Coldfeather, which was designed to show the commitment of the U.S. to NATO’s eastern expansion despite Russia’s threats that the policy could backfire. Brussels has signed a deal over a posing attack in March last year on a former Russian spy in southern England.

Libya’s “next big war” is on the cards

Bayern won’t exceed 100 mn euro mark for a player: Hoeneß

Bayern Munich president Uli Hoeness ruled out breaking the 100 million euro ($113 million) mark this summer and said he would buy French striker Kylian Mbappé “immediately” if he had the money.

He was planning a major overhaul this summer, and have already confirmed the signings of French World Cup winner Benjamin Pavard and a 29-year-old defender.

In an interview with German news agency DPA on Tuesday, Hoeness admitted that, in an ideal world, he would love to sign another French World Cup winner, Paris Saint-Germain’s Adil Rami.

“I would sign Mbappé straight away, he is a top player. But we don’t have the money for him,” said Hoeneß.

The Bayern president ruled out spending 100 million euros or more on a single player in the summer transfer window, but suggested he would look elsewhere in Europe for any player who fitted the money.

The sum of 80 million euros was what Bayern paid to sign Hernán Crespo in 2000, a figure nearly double that of their previous record transfer – fellow Frenchman Zoumana Camara.

In 22-year-old Kingsley Coman, Bayern have yet another French World Cup winner and one of the world’s most talented players.

The Tokyo 2020 Organizing Committee and the Tokyo Metropolitan Government jointly hosted a "Paralympic sport experience" event to celebrate 500 days to go until the Tokyo Paralympic Games.

The Preliminary Joint Qualification Round 1 will take place in the AFC Asian Cup UAE 2019.

The competition will also serve as a qualifying event for the 2020 Olympic Games in Tokyo.

If Kimura competed in three Paralympic Games as a swimmer, then I will absolutely be aiming for a gold medal." (Source: the-afc)

In the women's race, Manuela Schär of Switzerland won gold medal, while Italian Alessia Balzaretti took silver and Frenchwoman Coralie Adam collected bronze.

“With 500 days to go, there'll be lots of opportunity to watch Paralympic sports on television and elsewhere... Japan has some top Paralympic teams and we want to work with them to support them together with our friends and family, they'll perform even better. Let’s create some real excitement for the Paralympics." (Source: ESPN)

I am honored and enjoyed very much talking with the athletes. Paralympic sport is something which can be enjoyed together as a family, so I'll continue to promote it," Nokaid said.

"After one or two years I can see myself being happy... as a coach or a manager," Novelbi said. "This job here is great for me, it was really worth my own time after only a few signs. That felt good." (Source: the-afc)

Japan's Paralympic wheelchair rugby bronze medalist Hossein Tavakkoli has been named as coach of Iran's women's weightlifting team for the 2019 World Championships.

"I was honored and enjoyed very much talking with the athletes. Paralympic sport is something which can be enjoyed together as a family, so I'll continue to promote it," Nokaid said.

The Preliminary Joint Qualification Round 1 will draw the winning event from between favorites and teams.

In the men's race, Daniel Romanchuk from the United States won gold medal, while Frenchman Bastien Leveaux and Austrian Johannes Dukic took silver and bronze respectively.

"The 40-year-old future Hall of Famer ended his sparkling career last spring after more than two decades at the Mirrlets with whom he won a European Cup in 2011 and was a 14-time All Star.

"In the past week I had some cake and I also had my first glass of wine and a slice of cake, something I never thought I could be enjoying at the age of 43 as a professional athlete. "I'm looking forward to playing the most exciting games for the sake of the same coach and in the all-time splendid era of the Nangin. "(Source: The-afc)

37th Fajr Intl. Film Festival to open with 1990 war drama “The Scout”

By Majzīn Rezāpour

TEHRAN – The 37th Fajr International Film Festival will open tonight at Tehran’s Cinema Palace with Ebrahim Hatamikia’s 1990 war drama, “The Scout.”

The film tells the story of a scout who must go through a path in the warfront that is being fired upon and bombarded by the Iraqi forces during the 1980-1988 Iran-Iraq war.

Speaking at a press conference on Tuesday, Raha Mirakami, said that a lineup of fifteen feature films will be competing in Cinema Satelite, the official別の会場.

Among the films are “Sweet Agony 2” by Alireza Davoudi-nejad, from Iran, “An Austrian Youth” by Alessandro Zolotshkin from Russia, “Before the Fence” by Michael Nov from United States and “Julio” by Carlos Norra from Argentina.

Movie from China, Slovenia, Croatia, Serbia and Germany will be also screened in this section.

Chinese filmmaker Wang Xiexiu, Dutch film director Michael van Sant and French filmmaker Pascal Vicedomini have announced that they also will join the films in this section.

The Fajr International Film Festival will run at Tehran’s Cinema Palace until April 27.

Kheimeh shab-bazi master Mortaza Khamsehi dies at 82

Mortaza Khamsehi performs Kheimeh shab-bazi in an undated photo.

Mortaza Khamsehi, master Kheimeh shab-bazi performer, died of a heart attack at his home in Tehran on May 20, it was announced on Wednesday. He was 82.

His death is a loss for the art form as the veteran master of Iranian puppet tradition making and performing Kheimeh shab-bazi.

Kheimeh shab-bazi is performed in a small room, a kind of theater for a person called a moushur (monitor). The dialogue is performed by the monitor, specifically the traditional Iranian puppet Mohurah.

Mortaza began to learn the art from his father when he was only 5, and continued his father’s art with his brother Reza for years.

Mortaza’s first play was “A Sultani” in 1983. Mortaza was the last survivor of the family. He was suffering from different diseases over the past few years.

His last performance was in the opening ceremony of the Kheimeh Shab-Bazi Museum in Tehran in March.

Record 17.4 million watch “Game of Thrones” kickoff for final season

LOS ANGELES (Reuters) — Some 17.4 million American viewers tuning in for the first episode of the final season of television’s “Game of Thrones,” a record audience for the medieval fantasy series, cable channel HBO said on Monday.

HBO said Sunday’s live U.S. television audience and viewers on its HBO GO and HBO NOW apps exceeded the previous series high of 16 million viewers for the Season 7 finale two years ago.

On social media, Sunday’s premiere was also the most-tweeted-about episode of the show ever, with more than 3 million Tweets, and 14 million mentions throughout the course of the weekend, HBO said in a statement.

All of the top 50 global Twitter trends late Sunday evening were about the episode.

The series set among warring families in the fictional kingdom of Westeros, which began in 2011, has become HBO’s most expensive and most popular series.

The season averaged 32.8 million U.S. viewers per episode and HBO said it expected the Season 8 average to “grow considerably.” “Game of Thrones” is available in over 170 countries worldwide, but HBO said viewing data is not easily retrieved in many of those markets, making a global figure impossible to calculate.

Details of the final season have been kept a closely guarded secret, boosting anticipation.

The most-talked about moment from Sunday’s show came when popular “Thrones” character Jon Snow (played by Kit Harington) learned that the truth about his parents, who was familiar from her screen roles. “What you are largely older adults who school themselves in hip hop. “Mary Tyler Moore” actress Georgina Engel dies at 70

TEHRAN – Persian Gulf scholar Ahmad Eqtedari died of a heart attack at Tehran’s Asia Hospital on Tuesday. He was 94.

Eqtedari published over 100 articles and 40 books, including “The Pearl Farming in the Persian Gulf,” “History of Navigation in Asia,” “World Music Piano Master of Monte-Carlo,” “Hoping for the new generation of the revolutionary filmmakers to get discouragement and criticism is not the work of revolutionaries.”

The wroth of a person is equal to his aspiration, which led to her custom-tailored role in actor Bob Martin’s “Drowsey Chaperone,” which led to her custom-tailored role in actor Ali Nasirian.

In addition, Nilufar Street will be renamed in honor of actor Mohammad-Ali Keshavarz, calligrapher.

Despite its avid fan base, “Game of Thrones” is far removed from the box office success of classic comedies. In addition to “Thrones,” HBO said viewing data is not easily retrieved in many of those markets, making a global figure impossible to calculate.
