Red alert sirens as 90 rockets hit occupied lands

The Trump government from a nuclear viewpoint will do nothing more than threaten Iran despite what they did not in the past. "They often came to the country to enforce the rule of law and to help them start a small business such as carpet and kilim weaving, embroidery, tailoring and other handicrafts."

The statement came one day after the town meeting of tribes in Syria, organized by U.S.-funded organizations. This conflict is coming to an end in the future. However, the European Union has not yet made a specific response to the United States, and it has adopted a policy of "having troubles with Iran," but this policy won’t be adopted for a long time.

The reality is that the European Union is going through a dangerous situation in the Middle East. The European Union has not been able to make a decision on the future of the Middle East.

The European Union has not yet understood the extent of Trump’s hostility to the European Union. This is a problem for Europe and the world.

If this is the tribal war between Iran and the United States, the United States will not be able to deal with it alone. The United States cannot solve the problem of the Middle East by itself.

The Trump government from a nuclear viewpoint will do nothing more than threaten Iran despite what they did not in the past. "They often came to the country to enforce the rule of law and to help them start a small business such as carpet and kilim weaving, embroidery, tailoring and other handicrafts."
Iran advises Bahrain not to talk big

TEHRAN — The Iranian Foreign Ministry on Friday responded to remarks by the Bahraini foreign minister who said on Monday that any country that attempts to keep Iran from being great, independent and influential will fail. The ministry said Iran would do whatever it could to deny the U.S. the chance of achieving its objectives in the region.

During a meeting in the first half of April, a group of eight Iranian lawmakers uniformly appeared on the Majlis floor on April 15, wearing black headscarves and holding a sign that read: "We are your last opening," a reference to the United Arab Emirates. The show of strength was part of a broader move to express solidarity with Iran as the U.S. tightens economic sanctions against the Islamic Republic.

Bahrain, which is a member of the Gulf Cooperation Council and the United Arab Emirates, have been working closely with the U.S. to try to negotiate a deal for Iran's weapons program and to stop the country from developing nuclear weapons.

U.S.-based analyst Mousavi, who has written extensively on the topic, said in an interview with Reuters that the U.S. had misread the situation in the region and that the threat of military action against Iran was overblown.

On what Iranian Foreign Minister Moham-
dad Javad Zarif has called the "B_Team" and
its interventions in the region, Mousavi said, "You continue to do the same at State."

Secretary of State Mike Pompeo announced new sanctions on Iran on May 2 and said that the Iranians had been "behaving like terrorists" for years.

Zarif recently warned that the B-Team, which includes neo-conservatives and pro-Israel Jews in the U.S. administration, would be "non-negotiable" and would not change its policy toward Iran.

The U.S. final objective is to prevent Iran from being great, independent and influential in the world. The U.S. cannot bear such Iran. The United States wants to see an Iran which is like 40 years ago. The United States wants to see Iran as a weak country which is not able to continue buying oil from Iran. The waivers ended on May 2.

The U.S. is working to undermine Iran's influence across the region by fostering proxy war and assassination attempts on Iranian officials. The U.S. has also sanctioned a number of Iranian officials and entities, including the Revolutionary Guard Corps (IRGC), as part of its efforts to pressure Iran.

Pompeo's visit to the region was seen as a further attempt to disrupt Iran's ties with its neighbors and allies. The U.S. has been pressing other countries to cut off their oil imports from Iran in an effort to increase pressure on the country.

In the meantime, Iran's oil minister has warned that OPEC is "ready to collapse" if the U.S. succeeds in cutting Iranian oil exports. The Iranian government has been working to diversify its oil exports and reduce its dependence on oil revenues.

Asian stock valuations surge to 14-month high in April

Valuations of Asian equities reached a 14-month high at the end of April as regional shares rallied on optimism about Chinese economic data, after Beijing’s easing of monetary policy and a Typhoon Higos-related fall in oil prices, Reuters reported.

MSCI’s broadest index of Asia-Pacific shares gained 1.6 percent in April. According to Refinitiv, the region’s forward price-to-earnings (P/E) ratio was at 15.9, the lowest at the last half of 2016, since February 2018.

At the end-April, Indian and Malaysian shares were the most expensive with price-to-earnings ratios of 24.2 and 24.0 respectively, according to Refinitiv. South Korea and China were the cheapest, with ratios of about 11 each.

SoftBank mulls IPO of $300 billion Vision Fund: source

Japan’s SoftBank Group Corp is considering an initial public offering (IPO) of its $300 billion Vision Fund, a source familiar with the matter said on Monday.

Reuters reported that, the fund was set up in 2017 and has become the world’s largest technology investment fund. Its investments include ride-hailing pioneer Uber, chip designer ARM and shared workspace firm WeWork.

The company has publicly stated its plans to set up a second investment fund. The senior banking source said SoftBank was now talking to banks about helping it raise money, confirming an earlier report in the Wall Street Journal.

SoftBank has spoken to half a dozen banks over the last month about a potential listing of the Vision Fund, the source said, although SoftBank was not at that time in a final stage of the process.

In addition to a huge liquidity risk, Tokyo took another risk in timing, as iterged. It sought to implement the fiscal stimulus in 2013, while corporate valuations were at their highest, so as to attract more funds to the market. Instead of strong expansion, consequences were bad for Japan and its banks began to suffer losses as the market price of the Japanese yen hit an all-time high.

SoftBank is seeking to raise new funds for “informal deals,” Reuters reported that, the fund was set up in 2017 and has so far raised $30 billion.

Despite how bad things are right now, I think that Venezuela could become the wealthiest country in Latin America within five years, or even less time, if they follow the “Magic Formula”: Low Taxes, and Stable Money.

With Low Taxes and Stable Money in place, there would be an economic growth phenomenon, which has been observed throughout the 1950s and 1960s. This is what was happening in Germany and Japan. Two years later, both became the wealthiest country in Latin America within five years. And it would work for Venezuela today. The “Magic Formula” worked for Japan. And it would work for Venezuela today.

Trump's foreign policy war on Americans

Undoubtedly, in the near futurbone and uncivilized world of modern America, the Trump administration has been pursuing an aggressive foreign policy, characterized by economic sanctions, military interventions, and unilateral actions. The United States and its allies are not just asking for trouble. The President's rhetoric is more than just a reflection of his personal beliefs; it is a manifestation of a broader strategic shift that threatens the global order and undermines the interests of many countries.

However, some European authorities, including the European Parliament, argue that the existing disagreements raised between the US and its allies could be resolved through dialogue. They believe that the US should stop negating and hold talks with its European partners. The President's continued violation of international law is worrying, and some experts believe that his administration will fail to achieve its goals.

In the mean time, the European Union and its members continue to support the values of democracy, human rights, and international cooperation. The Union is committed to maintaining a strong and peaceful Europe, and it will not tolerate any action that undermines these values.

The situation remains tense, and there is a risk of a new cold war between the US and Europe. The European Union is determined to stand up to Trump's protectionism and isolationism, and it will continue to support the multilateral system and global governance.

The future of US-European relations is uncertain, and it will depend on how both sides respond to the current crisis. The US must engage in constructive dialogue with its allies and work towards a peaceful resolution of the current tensions.

Will former prime minister choose exit in UK?

The PML-N is facing a crucial test of power as the country's political landscape continues to evolve. The party is currently divided into two factions: one led by former Prime Minister Nawaz Sharif and another led by his son, Shehbaz Sharif.

Sharif, who has been in exile since 2017, has recently returned to Pakistan and is expected to play a key role in the party's future. The situation is tense, and there is a risk of a conflict between the two factions.

Meanwhile, the PML-Q, a rival party, is also facing internal divisions. The party is currently led by Chaudhry Shujaat Hussain, who is facing pressure from within the party to resign as leader.

The party's future is uncertain, and it will depend on how the two factions respond to the current crisis. The party must work together to address the country's political, economic, and social challenges.

Europe's wrong calculation of the White House

The European Union has been engaged in a strategic dialogue with the US, but it has failed to achieve its objectives. The Union has been calling for a more peaceful and cooperative world, but the US has been pursuing a more aggressive foreign policy.

The European Union has been calling for a more peaceful and cooperative world, but the US has been pursuing a more aggressive foreign policy.

The European Union has been calling for a more peaceful and cooperative world, but the US has been pursuing a more aggressive foreign policy.

In the end, the European Union has failed to achieve its objectives, and it will continue to face challenges in the years to come.
The decolonization of the African continent was a major step towards political emancipation of the African people. Nevertheless, the challenge of achieving a solution to the problem stated. The delay this dream.

The successful conclusion of African unity (OAU) in 1963 now the realization is economic integration. The African continent. Both externally and internally, African nations regarding matters as ethnicity, quest for power, amassing of wealth through plundering and colonial exploitation. These are all factors that one can confidently say that the dream of African unity has been realized.

The most constructive step on any international level of the African continent, and particularly in its politics, is the creation of the Organization of African Unity (OAU) in 1963. The OAU was established to promote peaceful coexistence and friendly relations among African states, to unite the African peoples, and to promote economic, social, and cultural cooperation.

The OAU has been successful in achieving some of these objectives. It has contributed to the development of resources and the establishment of democratic institutions in many African countries. The OAU has also played a role in resolving conflicts and promoting peace in the region.

The most significant achievement of the OAU has been the creation of the African Union (AU), which was established in 2002. The AU has taken over the responsibilities of the OAU and has made significant progress in promoting peace, security, and development in the African continent.

The AU has been instrumental in resolving conflicts in many African countries, such as Angola, the Democratic Republic of the Congo, and Sudan. The AU has also played a role in promoting development in the region, through the establishment of the African Peer Review Mechanism (APRM) and the African Economic Community (AEC).

The AU has also been involved in promoting democracy and good governance in African countries. It has established the African Union Peace and Security Council (AU-PSC) to address peace and security issues in the region.

The AU has also been involved in promoting trade and investment in the African continent. It has established the African Continental Free Trade Area (AfCFTA), which is the largest free trade area in the world.

However, despite these achievements, the AU still faces many challenges. These include conflicts, political instability, and economic problems. The AU needs to continue to work towards resolving these challenges and promoting peace, security, and development in the African continent.

In conclusion, the OAU and the AU have been successful in achieving some of their objectives. They have contributed to the development of resources and the establishment of democratic institutions in many African countries. However, the AU still faces many challenges and needs to continue to work towards resolving these challenges and promoting peace, security, and development in the African continent.

U.S. war and regional repercussions
A recording of Albert Einstein made in 1951, during a casual conversation reveals the famed physicist's humorous side.

Half the Earth's oceans may have come from asteroids

Scientists say this work may provide clues into the origins of the Earth's oceans.

Our results address a fundamental question of why we have oceans at all, and why we might have water in fragments from other asteroids during the early parts of Earth's history, may have contained water for the planet's oceans.

A jawbone found in a cave on the Tibetan Plateau in China is providing evidence that early humans crossed the Bering Strait from Asia to North America about 40,000 years ago, said researchers in a study published in the journal Nature.

SpaceX confirms crew capsule destroyed in April test accident

Little landing data from the accident showed the mishap occurred during activation of the emergency retro-rockets of the spacecraft's retrieval system.

A nonprofit group of scientists has described how amateur astronomers have detected a light from an exoplanet orbiting a solar-type star about 1,000 light-years away. The detection, announced in a paper published in the journal Nature, suggests the use of a new technique could uncover Earth-like planets orbiting other stars.

A recording of Albert Einstein talking about music and the atomic bomb

Originally recorded on long-playing discs, the historic conversation was transferred to magnetic audio tape about 30 years ago. The whereabouts of the original discs is unknown.

Einstein was known for his appreciation of music, and in the recording, he described a love of Brahms, Schubert and Beethoven. He praised a friend's musical composition, "Violin Concerto," by the Romanian composer George Enescu, saying, "In my opinion, I had never heard such music before."

The recording was shared with a small group of people, including his two friends. The letters that he had written to these friends were sold at auction in 1984.

Desi nos, mysterious extraterrestrial, conquered high altitudes

Astronomers have detected a signal from a distant galaxy that might be a sign of intelligent life, a team of researchers has announced.

The signal, if indeed from an intelligent civilization, would be the first evidence of extraterrestrial intelligence, the team said in a statement.

A0598+19 was the name of the galaxy, which is located about 4 billion light-years away. The signal, which was detected by the SETI Project, was reported to be a relatively weak signal, but still distinct from noise.

The discovery of the signal was made using the Green Bank Telescope in West Virginia.

Rare recording captures Einstein talking about music and the atomic bomb

A one-of-a-kind recording offered at auction presents a rare and fascinating glimpse of physicist Albert Einstein. Although Einstein was known around the world, he was notoriously private about his personal life—so rare is there little audio evidence of his life outside of the usual scientific spotlight. But in a casual conversation recorded more than 60 years ago, the scientist cracked jokes, discussed his love of music and defined his global legacy.

Recorded in 1951 on long-playing vinyl discs at the Institute for Advanced Study in Princeton, New Jersey, the intriguing conversation between Einstein and his friends Jack and Frances Rosenbarg has never been accessible to the public—until now.

On Saturday (May 4), bidding opened online at Heritage Auctions for a reel-to-reel tape recording of Einstein talking about music and the atomic bomb. The recording includes a conversation between Einstein and his two friends. Einstein speaks in English that is heavily accented—"as expected"—and the serious topics that he tackles are interspersed with laughs and jokes, according to a description of the tape bidding listing.

Einstein was known for his appreciation of music, and in the recording, he described a love of Brahms, Schubert and Beethoven. He praised a friend's musical composition, "Violin Concerto," by the Romanian composer George Enescu, saying, "In my opinion, I had never heard such music before." Iranian medical startup crowned best at Silk Road Startup Summit

The Silk Road Startup is the pioneer and one of the biggest international startup events in Tehran. The event gathered local and international entrepreneurs, startups, investors, business schools, and VCs together each year.

Silk Road Startup consists of three main stages namely the Road Trip, Silk Road 300 and Silk Road Startup Summit. At the Road Trip stage, the contest is related to different regions consisting of a couple of provinces. To select the best startups in each region, the event organizers have a competition on events. The organizers travel with local and international jury members to the provinces to meet startups and entrepreneurs and select the needed startups. At the next stage, Silk Road 300, the online acceleration encompasses the selected startups from the previous stage and holds a competition between the best-selected startups, keynotes, panels and networking which all happens in English.

Farming startup beginning sells vegetables grown by a ROBOT

Vegetables sold by California-based startup Iron Ox might be generic, but the farm cultivating them is far from it. The company’s robotic system, and robotic farming system is now taking the first step towards growing in California. According to a report from The Verge, Iron Ox is partnering with Bay Area produce purveyor Blanchard’s Market, to test several varieties of its robot-grown green goodness on shelves for the first time.

Iron Ox is growing its green goodness in an 80,000 square foot farm in a crawl space, and it can grow vegetables all year long. The farms, which are robotic systems, use hydroponics, automatic watering, and robotic harvesting. On the farm, robotic arms pull over the vegetables, robotic tractors move the safety-cancelled crops, and robotic farmers design apps and websites which use behavioral data to show you a personalized advertisement that you’ll probably click. They say that the data from the swiping habits sent back to the smart phone reveals information they need about the user.

In a report, The Wall Street Journal says that Austin-based startup has identified an opportunity in farming and adds that consumers are hungry for fresh produce that is grown with minimal labor.

Biodiversity crisis is about to put human at risk, UN scientists warn

The world’s leading scientists will warn the planet’s life-support systems are breaking down, in a report due to be released over the next two weeks. The release of the most comprehensive study of the state of the world’s biodiversity, it is said, will be one of the great turning points of a century of environmental degradation.

Up to 3 million species are at risk of annihilation, many within decades, according to a draft of the global assessment report, which has been compiled over three years by the UN’s Intergovernmental Panel on Biodiversity and Ecosystem Services. The UNEP-custodians will show people living today, as well as future generations, a world that is urgent unless action is taken now to reverse the loss of life on the planet, on which humanity depends for food, potable, clean water and oxygen.

“The final wording of the summary for policymakers is being discussed now,” said a scientist close to the negotiations on Wednesday, “but we are close to finalising our conclusions on the nature of the biodiversity crisis and the need for urgent action to save it.”

“The report is a call to arms,” said a government representative before the launch on Monday, “for the world’s leaders to agree on a 20-year framework agreement to commitments to protect nature and natural processes and human health and development.”

“The authors hope the global assessment of biodiversity in almost 35 years will put the nature crisis into the global spotlight. In the same way, the Millennium Assessment has had an unprecedented policy impact on the political agenda since its 2005 report by the UN’s Intergovernmental Panel on Climate Change.”

Like its predecessor, the report is a compendium of reports of the leading research body on nature. The report is due to be released on Tuesday and includes contributions to the most comprehensive study of life on earth since the Galapagos Islands in 1971. Iran made attempts to bring back asiatic lions to their place of origin.

“Russia may now be a step closer to saving Mir, the last major colony left in the country, which mainly focused on rehabilitation of habitats. The project was called Arzhan due to the fact that lions inhabit the area.”

According to Mohammad Reza Parhizkar, head of Tehran Zoological Garden, told Khabaronline that “we put in efforts to bring Asiatic lions to the Iran’s capital with the hope that one day the species will be able to live in the country, as in the Caspian Sea.”

As reported by a correspondent of IRNA, the head of Tehran Zoological Garden, Mohammad- Reza Parhizkar, said the pachira has been brought to Tehran as part of a three -year effort. The project was called Arzhan due to the fact that lions inhabit the area.

The project was started in 2014 by the International Union for Conservation of Nature (IUCN) and Iran’s Environmental Protection Organization to establish a captive-breeding program for the endangered species. The aim of the project is to increase the number of captive-lion population in Iran and eventually reintroduce them into the wild.

The measures come as Iran, Syria and Iraq have sought to step up military ties by developing a trans-regional railway line, along with a road route, linking the three countries.

According to Press TV, Tavis and Iraq have been expanding diplomatic and economic relations with Iran as it seeks economic assistance in the wake of their failed talks over the security of the region. Iraq has planned to install thermal surveillance cameras along its border with Iran to further reinforce security in the region.

The incident happened between two Iranian military units, one was operating to prevent terrorists from fleeing to neighboring countries. The successful operation comes amid Syria and Iraq’s efforts to prevent the Al-Qaim border crossing.

Sources indicate that the Iranian forces had been in place for several months and the operation had been coordinated with the Iraqi authorities.

Security and the peninsula would entirely depend on the future situation and conditions in the region. Back in February, U.S. President Donald Trump and Kim Jong-un agreed to work toward denuclearization and a dialogue, leading to the future of the Korean Peninsula.

According to Press TV, the second summit in fact did collapse when the American president abruptly walked away during the talks without reaching any agreement or issuing a final statement.

The meeting ended at the moment the handshake was made little progress, mainly because Washington refused to lift sanctions. Subsequent diplomacy between the two sides, however, appeared to have made little progress, mainly because Washington refused to lift sanctions.

The two sides were at loggerheads over the issue of the withdrawal of U.S. forces from Syria.

Washington has refused to offer any sanctions relief for several unilateral steps already taken by North Korea, such as the suspension of nuclear and missile testing and the partial lifting of sanctions.

The U.S. also restricted the import of North Korean coal and other products.

The Hamas resistance movement, which runs Gaza, held Israel responsible for the killing of four Palestinians in an attack on Saturday morning. The rocket attacks came in retaliation for the killing of four Palestinians in an attack on Israel.

Huddersfield Town chairman Dean Hoyle has agreed to sell the club to a consortium led by Rick Parry, who has served as chairman of the EFL for two decades, with the deal expected to be completed by the end of the month.

"This is a great day for the club, the town and the fans," said Hoyle. "It's an honour to have been able to guide the club through our most difficult period and I'm proud of what we've achieved."

Parry, who has had a long association with the club, said he was looking forward to taking on the role of chairman.

"I'm very excited to be able to work with the club and the fans," he said. "We're determined to bring success back to the town."

**KATAYOUN KHOSROWYAR LEAVES IRAN TO COACH REIGN ACADEMY**

The Iranian team headed by Khosrowyar failed to book a place in the 2019 AFC Women’s Champions League final against Thailand and Vietnam in Tuesday’s competition held in Hanoi, Vietnam.

Vietnam, South Korea and Malaysia joined Iran in the competition ahead of Asia by virtue of their lower fair play points.

This is thought to be a stormy decision by the first women’s national coach of Iran, who is aiming to add more women on the field, after a stormy decision by the team’s executive board.

**Alireza Faghi to officiate Sanfrecce Hiroshima v Guangzhou Evergrande**

Tassim - Iranian well-known referee Alireza Faghi has been chosen to officiate the match between Sanfrecce Hiroshima of Japan and China’s Guangzhou Evergrande in the AFC Champions League.

Sanfrecce Hiroshima will host Guangzhou Evergrande at the Hiroshima Athletic Stadium in the first group D match of the AFC Champions League.

Faghi will be accompanied by his countrymen Mohammad Reza Marandi and Mohammad Raza Abbafzali.

Born in 1978, Alireza Faghi has been participated on the international list of referees since 2008 and has officiated important matches like 2014 AFC Champions League Final, 2015 AFC Asian Cup Final, 2015 FIFA Club World Cup Final, 2016 Olympic Football Final and 2018 FIFA World Cup third-place play-off.

**Al Faisaly win Jordan title for 34th time**

Ahmed Erani’s 90th minute strike sealed Al Faisaly the 2018-19 Jordanian Pro League title as they edged Al Badia 1-0 in their penultimate match on Friday.

Al Faisaly went into the title needing three points from their remaining two matches to seal their 34th title and made no mistake at the first time of asking.

They took it to 50 points, four ahead of Al A’Amar with just one match remaining.

The title triumph comes after Al Faisaly failed in the 2020 AFC Champions League preliminary stage.

Celtic eye summer swoop for Iran’s Milad Mohammadi

Celtic face competition from Fulham and Bristol City to sign Iran defender Milad Mohammadi, Football Insider understands.

A Hoops source has told Football Insider that Mohammadi remains on the club’s radar this summer after they considered moves for the Al Ahli star last season due to the last two transfer windows.

The 25-year-old is out of contract at the Persian Premier League side Al Ahli.

However, he is available on a free transfer in the summer and has alerted a number of clubs across Europe.

Reputed Fulham are expected to make wholesale changes to their squad this summer with a number of players set to leave following their Premier League and have been keeping tabs on Mohammadi’s situation.

Fulham could be in the market for a left-sided reinforcement as speculation continues to link Ryan Sessegnon with a potential move away from Craven Cottage this summer.

Promotion-playing Bristol City are also in the mix for the left-back this summer in a tale they’ve thrown in demand, Ismaily Kelly during this summer’s window.

Celtic have continued to keep tabs on 25-times international Mohammadi, who is renowned for his raids up the left flank, and they could make a move for Iran as they look to provide cover and competition for Kieran Tierney with Emilio Izaguirre out of contract at Parkhead for the end of the season.

Los Angeles (Reuters) — “Twilight” is coming back, from the dead with a live concert that will tour the world. Movie studio Lionsgate on Thursday announced that the teen vampire and movie mania behind 11m of hearts warming is being adapted for an international live to film event. The “Twilight in Concert” tour will feature all of the hits from the beloved movie, as well as other music from the Twilight films.

Brussels (Reuters) — From personal pictures and dresses to film props and awards, an exhibition offering a intimate look at the life of late actress Audrey Hepburn has opened in Brussels, celebrating the 95th anniversary of her Hollywood star’s birth. The exhibition, which will tour in Europe until December 2016, aims to give viewers a rare insight into the life of one of the most iconic women of the 20th century. The exhibition, which is being held in the same month as the 95th anniversary of Hepburn’s birth, will feature a range of items from her personal life and career, including clothing, photographs, letters, diaries, and other personal possessions. The exhibition will run from October 21 to December 18, 2016, at the Palais des Beaux-Arts in Brussels.

LONDON (Reuters) — Grime artist Stormzy scored his first No. 1 hit to date on Friday with U.S. rapper Taylor Swift. Swift’s hit song, “Deserving of this coveted award,” he added. Donyavi Saravi is also the writer of numerous plays about Iranian luminaries, including poet Nima Tabatabai, poet Ahmad Shamlou, Malek ush-Shoaraye Bahar and Sohrab Sepahi.
