Foreign Minister Mohammad Javad Zarif (L) met on Friday with Pakistan’s PM Imran Khan (C) during a trip to Islamabad.

President Hassan Rouhani said on Thursday that the Iranian people will make changes in the United States if its leaders have waged an “economic war” against the Islamic Republic.

"Culture of armistice and resistance should show the path. The more we progress against the US, the more we should think about our dignity and independence. However, the people will once again show that their photo will add on fruit and will make the enemies regret," he said during a speech at the state-run Revolutionary Guards Air Defense annual conference.

He noted that the Iranian people have "as a new weapon" in the fight against the US sanctions and will defeat them through rising wealth and prosperity.

The meeting was welcomed by the Russian delegation’s visit to Iran and said that it is important in the development of the rail transportation industry’s infrastructure.

Tearful Marlise, paving way for Brexit confrontation

TEHRAN — Fighting back tears, British Prime Minister Theresa May said on Friday she would quit, triggering a contest that will bring a new leader to power who is likely to push for a more drastic Brexit divided deal.

May’s departure will deepen the Brexit crisis as a new leader is likely to want a more conclusive split, raising the chances of a confrontation with the European Union and a potentially unpredictable snap parliamentary election, reported the Financial Times.

According to Rai of public relations, a Russian delegation from the country’s rail sector is visiting Iran to follow up on previous agreements and regions of cooperation.

In the meeting, Rasouli welcomed the Russian delegation’s visit to Iran and said that it is “important in the development of the rail transportation industry’s infrastructure.”

Yemeni drone hits Patriot missile system at Saudi airport in Najran

TEHRAN — Yemeni army forces, supported by allied fighters from Popular Mobilization Units, reportedly launched an airstrike against an MIM-104 Patriot system stationed at an airport in Saudi Arabia’s southwestern border region.

A Yemeni military source, speaking on condition of anonymity, told the local press that the incident occurred at the airport in Najran as a civilian jet made its landing approach.

The US-led coalition has been using the Patriot systems, which were purchased from the US, to counter and frustrate the U.S. “deal of the century.”

Zarif refers to JCPOA, which was signed in 2015, as a "cornerstone of international order and stability" and asserts that the accord's failure to compensate for the U.S. withdrawal from the agreement has led to its reimposition of sanctions against Iran by the Trump administration.

In the first step, Iran announced that it will stop honoring the JCPOA's limits on its enriched uranium levels. This move, however, has not been reversed. Iran also announced that it has increased its production of advanced nuclear fuel. The country's foreign minister, Mohammad Javad Zarif, said on Thursday that Iran will continue to enrich uranium, but not beyond the limits set under the JCPOA.

The Iranian government has announced that it will continue to honor its commitments under the JCPOA, but it will no longer comply with its restrictions on its nuclear activities. Zarif said that Iran will continue to enrich uranium, but not beyond the limits set under the JCPOA.

Zarif's message was a clear indication of his determination to safeguard Iran's interests and to resist the U.S. pressure. The JCPOA is a critical part of the global nuclear non-proliferation regime and is a cornerstone of international order and stability. Its failure to function properly would have serious consequences for global security and stability.

Zarif's message was also a clear indication of his determination to safeguard Iran's interests and to resist the U.S. pressure. The JCPOA is a critical part of the global nuclear non-proliferation regime and is a cornerstone of international order and stability. Its failure to function properly would have serious consequences for global security and stability.
Democrats: Trump officials are inflating the Iran threat

“I’ve read the intel too. And let me be clear: That’s not what the intel says,” says one Democratic senator.

(Vox) — The Trump administration has claimed for weeks to have intelligence showing Iran is planning to attack Americans in the Middle East. But Democrats in Congress who have reviewed the intelligence say that it’s a complete fabrication. They believe the president has ulterior motives for inflating the situation.

“Let’s be clear: this is a fabrication, and it’s an intelligence fabrication,” said Sen. Chris Murphy (D-CT) on April 30, 2019, outside the Capitol in Washington, DC. “I think this is an attempt to break up negotiations in order to go to war with Iran.”

Iran’s deterioration power prevents war, commander says

Though the operation in April 2019 liberated the city in May 24, of the same year, in retaking the city, the Iranian forces took some 19,000 Iraqi troops as hostages.

Oil prices recouped around 1% on Friday but were on track for users of blockchain technology. The easing of tensions between Iran and the U.S., which could turn disruptive," said ANZ bank said on Friday. Iran has an exemption from the American sanctions, so it can continue to purchase energy from Iran, according to Trump’s White House spokesperson. Earlier, Iraqi Oil Minister Thamer al-Nahedh said that oil sales to zero.

Iraq heavily depends on Iranian energy to subsidize itsemade cutting-price power grid. The country has repeatedly rejected U.S. requests to stop buying energy from Iran. Iraqi Prime Minister Luay Al-Khateeb has also said that Iraq will need to import oil from Iran.

Iranian oil sales have been hit by U.S. sanctions and the Islamic Republic has been looking for ways to keep its oil exports afloat. The Islamic Republic has been trying new ways to help its oil exports allay its new ways to diversify the market for its oil, according to the state-owned oil ministry’s news guidelines.

Iranian Oil Minister Bijan Namdar Zanganeh has said that NOIC will offer crude oil at IRENEX every week. The minister said that it may take some time for selling crude oil at IRENEX to be a common practice, but the country will offer the product at this market every week. NOIC offered crude oil at IRENEX on October 28, 2016, but faced no ill effects since then. In the first round, NOIC could sell 250,000 barrels of crude oil at $71.80 per barrel. With the daily supply amount of over one million barrels, the market wrapped up by selling eight 250,000-barrel cargos of oil on the day.

Global energy prices are influenced by the availability of renewable energy at low costs

Blockchain is a decentralized ledger technology that can be applied to the energy sector. In the energy sector, blockchain enables the tracking of energy, which is expected to enable a fundamental shift in the distribution of energy. According to a newsreports.com, blockchain technology, when attached to a crypto currency, allows public members to trade freely and securely all transactions in a blockchain. These transactions are recorded on a shared ledger without the interference of a third party such as a bank, stockbroker, or any energy company. Furthermore, many aspects of the energy revolution are expected to suddenly become cheaper as blockchain technology is deployed.

Blockchain functions as a public ledger that can be used anywhere. It is a distributed ledger that is maintained by participants in the network. Smart agreements can be used to improve energy governance, which could provide real-time data about the system.

The blockchain technology in the energy market can be used for smart contracts. A smart contract can be used to execute transactions between two parties. The blockchain technology can be used to facilitate the transactions. The blockchain technology can also be used to improve energy management. Blockchain technology in the energy market can be used to improve energy management. Blockchain technology can also be used to improve energy management. Blockchain technology in the energy market can be used to improve energy management.

Oil prices fell on Friday, but were on track for their biggest weekly loss in 2019.

Trade tension between Washington and Beijing was eased on Friday, but it has gone into reverse taking a heavy toll on the global markets. U.S. President Donald Trump surprised the market earlier this week by warning that China was about to import all the world’s oil. Annexations of the new oil product export quotas have seen a substantial increase in the number of projects that are currently awaiting final investment decisions (FIDs).

That’s because oil-indexed gas contracts are more common in Europe, where a number of promising projects are currently moving towards FIDs. The current escalation of trade tensions could not have come at a worse time. The United States recently renewed its commitment to build LNG projects, having made a major announcement in May. The U.S. government has announced that it will offer a new round of LNG export licenses to the global market. These new licenses are expected to give a boost to the global LNG market.

One of the main strategies that Iran chose to execute to help its oil exports allay its new ways to diversify the market for its oil, according to the state-owned oil ministry’s news guidelines. The country will offer crude oil at its main market every week. NOIC offered crude oil at IRENEX on October 28, 2016, just five days before the new U.S. sanctions on Iran’s petroleum sector took effect (November 4). In the first round, NOIC could sell 250,000 barrels of crude oil at $71.80 per barrel. With the daily supply amount of over one million barrels, the market wrapped up by selling eight 250,000-barrel cargos of oil on the day.

Now, offering heavy crude at IRENEX can open a new front for the exports of Iranian oil as this type of crude has added its own pressure to refining margins. That’s because oil-indexed gas contracts are more common in Europe, which has a number of promising projects that are currently moving towards FIDs. The current escalation of trade tensions could not have come at a worse time. The United States recently renewed its commitment to build LNG projects, having made a major announcement in May. The U.S. government has announced that it will offer a new round of LNG export licenses to the global market. These new licenses are expected to give a boost to the global LNG market.

Bannon promotes economic fascism

GLOBAL TIMELINES — Former White House chief strategist Steve Bannon told the South China Morning Post last month that the exit of China from the World Trade Organization was an important moment for China. Bannon said China’s tariff-raising threats toward the US are bringing an oligarch to some people amid the US-China trade talks.

Regrettably, Bannon, a group of economic fascists are advocating for a new war between China and the US. They also call for the US to stop purchasing Chinese goods and technologies, as well as to stop investing in Chinese companies. The fundamental aim is to achieve hegemony in the global economy.

The US economy is fundamentally connected to the Chinese economy. If the US were to stop buying Chinese goods and technologies, it would severely affect the US economy. In this context, China’s economic goal is to achieve hegemony in the global economy.

Can Japan stand up to US request to contain China?

By Ay Jun

GLOBAL TIMELINES – Two days before the US President Donald Trump will visit a Asia, a side news story caught the globe’s eye on Thursday as Japanese Prime Minister Shinzo Abe announced the country’s plan to contain Huawei “to comply with US restrictions,” according to The Nikkei.

There is a growing consensus in Japan that containing Huawei should be among the top priorities. Abe’s administration has been under pressure to take a firm stance on the matter.

Nevertheless, the US government has warned that Tokyo and other allies must take action against Huawei. The US has lifted a ban on Huawei’s shipments to Japan. The US has also imposed a ban on Huawei in other countries. If Japan were to continue its policy of limiting Huawei’s access to its market, it could face serious consequences.

The US government has been pushing Japan and other countries to limit Huawei’s access to their markets. The US has also imposed a ban on Huawei in other countries. If Japan were to continue its policy of limiting Huawei’s access to its market, it could face serious consequences.

People like Boris Johnson and conservative figures demand a “hard Brexit” and the UK’s departure from the EU should be governed by the interests of the country! In the near future, Britain will face a crisis and policy under Margaret Thatcher. How can the UK survive?

The speech that ultimately precipitated the UK’s exit from the EU was made by the UK’s Conservative Party Prime Minister, Paul Martin. In his speech, Martin outlined the UK’s new political alignment and the UK’s economic strategy.

Western MSM parrot flawed narrative on Fujairah “sabotage”

By Alireza Hashemi

TEHRAN — The May 12 explosions off the coast of Fujairah, where two small tankers on their way from Iran to the Gulf were targeted, have been portrayed in the international media as a possible attack by Iran. But this story is a classic example of how Western media, including US news agencies, are not just parroting US government claims, but are also passing along information from local sources who have close ties with US intelligence agencies.

Iranian news agencies have been critical of the way Western media have reported on the incident. The Knightly News website, which is based in the UAE, recently published an article titled “The May 12 Explosions Off the UAE: An Update,” in which it criticized the way Western media had reported on the incident.

The article noted that, while the Western media had been quick to blame Iran for the incident, there were no signs of any direct involvement by Iran in the attack. The article also pointed out that, while there were some inconsistencies in the reports, it seemed that AP appeared more like an independent news agency than some of the other news agencies.

Western media have been quick to blame Iran for the incident, but the evidence is circumstantial at best. The US-based Associated Press (5/12/19) reported that the May 12 explosions off the UAE coast were “false,” after it spoke to a source that had been “dismissing the reports.”

The Mayadeen report attributed to “Gulf sources” might contain information that is similar to the story that was circulating in the Middle East at the time. The Western media have not been able to confirm these reports, and the sources are not known to the public.

The Western media have also been quick to blame Iran for the incident, but there is little evidence to support this claim. The US-based Associated Press (5/12/19) reported that the May 12 explosions off the UAE coast were “false,” after it spoke to a source that had been “dismissing the reports.”

**The Tehran Times new pocket-sized glossary is now available on the market. The reader-friendly is a rich source of the most common journalistic terminology collected by the daily’s retired staff. It can benefit a wide range of tastes from students to professional journalists. Persian equivalents have been given for all entries, including idioms and expressions. The glossary also includes example sentences for entries the authors thought it would be a bit difficult to learn. For more information contact: Tel: 021-430 51 450 times1979@gmail.com**
A team of international scientists — including researchers at the University of St. Andrews, Syracuse University and Royal Holloway, University of London — has demonstrated a new source of food for aquatic animals, which could provide context for other nutrient feedbacks that were important during early planetary evolution. The research, published in Nature Geoscience, reveals how the supply of trace elements directly impacted the growth of Earth’s oceans and atmospheres and were key to the evolution of life on Earth. The most dramatic change in Earth’s history followed the evolution of oxygenic photosynthesis, which fundamentally transformed the Earth’s atmosphere, so their availability to life has fluctuated over time and is a key part of understanding how the chemistry of the Earth’s environment evolved through geologic time.

The researchers, published in Nature Geoscience, reveal how the supply of trace elements directly impacted the growth of Earth’s oceans and atmospheres and were key to the evolution of life on Earth.

According to the study’s lead author, Dr. Christopher Junium, a senior research associate at the University of St. Andrews, the availability of nitrogen and ammonium in the pre-GOE oceans. This ammonium would have provided an ample source of nitrogen to fuel the early biosphere and associated oxygen production.

This news has implications that there is hope of identifying early evidence for organic photosynthesis. Scientists of all ages and description must continue to search for these puzzles in order to understand the origins of life.

The study was supported by the European Research Council under the European Union’s Horizon 2020 research and innovation programme and the Leverhulme Trust. The research was also supported by the Natural Environment Research Council and the University of St. Andrews.

# Earth's Early Nitrogen Cycle

The early Earth had a nitrogen atmosphere, which is why the researchers focused on ammonium. Ammonium is a building block for amino acids, which are the building blocks of proteins, and is a key nutrient for early life. The researchers used a model to show how ammonium could have been an important source of nitrogen for early life.

The researchers also showed that the availability of ammonium was crucial for the formation of DNA, the blueprints of all life, as they are required for the formation of DNA, the blueprint of life, and proteins, the machinery.

Adding ammonium to the model showed that the availability of ammonium was crucial for the formation of DNA.

The researchers found that the availability of ammonium was crucial for the formation of DNA, the blueprints of all life, as they are required for the formation of DNA, the blueprint of life, and proteins, the machinery.

The researchers also showed that the availability of ammonium was crucial for the formation of DNA, the blueprints of all life, as they are required for the formation of DNA, the blueprint of life, and proteins, the machinery.

Iran's Marvdasht Museum and Jecho-e-Sharaf in the desert of Kerman Province have been selected as the UNESCO World Heritage sites in Iran.

The main temple is a stupa built in three tiers around a tall which is the main shrine. The stupa is about 50 meters high. Around the circular platform are 72 openwork stupas, each containing a large statue of Buddha.

The temple is located in the Keda Valley, in the south part of Central Java, at the center of the island of Java, Indonesia.

A UNESCO World Heritage, the Borobudur Temple is one of the greatest Buddhist monuments in the world, and was built in the 8th and 9th centuries CE during the reign of the Sailendra dynasty.

The temple was used as a Buddhist temple from its construction until sometime between the 10th and 11th centuries when it was abandoned. Since its re-discovery in the 19th century and restoration in the 20th century, it has been brought back into a Buddhist archaeological site.

While traveling abroad, it’s important to not seem like an obvious tourist wherever you are.

After all, you wouldn’t want to give other tourists a bad rep. This means you have to play by the local rules. But sometimes, people just don’t get the memo.

When traveling abroad, it’s important to not seem like an obvious tourist wherever you are.

For example, tourists are often warned to not eat the food in street markets, as locals might consider it unhygienic.

In addition, tourists are often advised to not touch locals without their permission, as it is considered disrespectful in many cultures.

However, tourists are often encouraged to respect the local culture and traditions, and to appreciate the local cuisine and arts.

Overall, tourists are often advised to be respectful and open-minded, and to follow the local customs and practices.

Tourists are often warned not to bury sand in sand dunes in Japan.

Tourists are warned not to burry sand in sand dunes in Japan.

The Dutch capital’s “I amsterdam” sign has been moved because it’s too popular with tourists.

The sign was moved from outside the Rijksmuseum, the city’s main art gallery, to the city of Amsterdam, as it was “drawn too big of a crowd to an already limited space.”

The two-meter high letters have been relocated to a “known neighborhood” in a bid to prevent tourists from jamming the city’s streets.

In addition, signs have been added in the district to guide tourists to their hotel.

While still offering many unique benefits, tourists are often advised to respect the local culture and traditions, and to appreciate the local cuisine and arts.

Referring to scientific and specialized capacity of the Japanese agency, he mentioned: “We are now in a development phase of a comprehensive tourism plan for the province of Iran including development of a comprehensive tourism plan.”

The project aims to promote tourism in the region, which is a major economic activity in Iran.

The project will be implemented in collaboration with the United Nations Development Program (UNDP) and the International Organization for Migration (IOM).

The project will provide training and capacity building opportunities for local communities and tourism stakeholders in the region.

The project will also support the development of tourism-related infrastructure, such as tourism offices, accommodation facilities, and transportation services.

The project will be implemented over a period of five years, with a budget of $1 million.

The project is expected to have a significant impact on the local economy, creating jobs and generating income for the residents of the region.

The project will also help to promote the region’s cultural and natural heritage, which is a major attraction for tourists.

The project will be implemented in collaboration with the local government, relevant agencies, and stakeholders in the region.

The project will be monitored and evaluated regularly to ensure its effectiveness and sustainability.

The project is expected to benefit local communities and stakeholders, and to contribute to the overall development of the region.
New research adds to the accumulating evidence that fasting may be helpful in the fight against chronic diseases by investigating the metabolic effects of fasting on the body. By understanding certain proteins, the practice may prove advantageous in the fight against metabolic diseases such as obesity, diabetes, and heart disease, but the timing and duration of between-meal fasting remains unclear.

Fasting from dawn to sunset for 30 days could help meet conditions relating to obesity, diabetes, and heart disease. The benefits of fasting have been found to include not just weight loss but also lower blood pressure and reduced inflammation.

Restrictive food intake may increase metabolic activity more than activities used recently to combat obesity. Eating less protein can help achieve weight loss, lower blood pressure, and decrease inflammation. It can also be used to treat long-term conditions such as obesity and heart disease, but the timing and duration of between-meal fasting remains unclear.

Salt harvesting: a way of survival for Lake Urmia

Malaria vaccine initiative

7 Persian fallow deer born in wildlife refuge in northern Iran

Iranian Fisheries Science Research Institute is the development of using a particle of soil or a drop of fresh water. At least 20 tons of algae per hectare on the basis of the scientific imports of foreign products, but also foreign exchange revenues of the country's need for eatable oil from these algae in oil need comes from abroad every year. For this reason, the level of the Iranian Fisheries Science Research Institute, and there is about 6 million dollar is spent annually on imports of pigments of plant studies and determination of the Iranian Fisheries Science Research Institute, and there is no time to much mass production. Another huge project can be the aquatic plant’s effectiveness, the production of edible oil from algae. The stages of this project, which is relatively new and in some cases with correct and scientific planning, we can produce 10 to 20 lion-dollar turnover. While at least an average of 2,000 tons of algae are needed per day for the production of pigments, this amount will not interrupt the production programs, but help to resolve the lack. Tajrishi added.

He went on to say that accordingly, salt mining is possible in the case of the ORA issue, permit, while withdrawal must be carried out on designated locations in order not to bring irreparable damages to the lake. All the lakes in the world have an average lifespan, in fact, the current lakes were once a sea, for example, the Caspian Sea and Lake Van were connected thousands of years ago, but the water gradually shrank and led to their separation.

To be able to make their life longer, they required, IRNA reported on Wednesday. Of course, all three measures should be committed to provide the areas hit hard with floods with home appliances and livestock, create employment and re-employment and reconstructed houses. Nourzad highlighted. He went on to say that “we have reached an agreement (with the people) with the government, to rehabilitate 20,000 housing units in flood-stricken areas.”

In North Khorasan, the government is creating 3,000 job opportunities as well, he added. Headquarters for Executing the Order of the Imam has pledged to pay some 8 trillion rials (nearly $190 million) in areas hit by the floods.

Since the beginning of the floods Headquarters for Executing the Order of the Imam has provided 3 million home appliances and 10,000 livestock, in addition to creating 28,000 job opportunities as well,” he added.

Yemeni drone hits Patriot missile system at Saudi airport in Najran

TEHRAN – The Yemeni army said on Saturday that it had targeted a Patriot missile system at an airport in Najran in Saudi Arabia using a drone. The attack comes amid tensions between the two countries after a recent series of drone attacks targeting Saudi-led coalition forces in Yemen.

According to the Yemeni army, the drone attack was launched to respond to continuous Israeli attacks on the Yemeni people, especially in the country's southern provinces. The attack was part of a wider escalation of tensions between Yemen and Saudi Arabia, which has sparked international concern.

The attack comes just days after a similar drone attack targeted a Saudi air base in the country's northwestern province of Najran. The attack was claimed by the Houthi rebels, who have vowed to continue their attacks on Saudi targets.

The Saudi-led coalition has been conducting a military campaign in Yemen since 2015, targeting Houthi rebels and their allies in support of Yemen's government. The conflict has resulted in thousands of deaths and a severe humanitarian crisis.

FIFA shelves plan to expand 2022 World Cup to 48 teams

FIFA has already had to adapt to cope with taking its showcase tournament to the Middle East. While Qatar won a vote in 2010 on the Gulf state hosting the 2022 World Cup, FIFA shifted the tournament from its usual slot because of high temperatures in the Gulf. So it put the finals on hold to November 21-December 18, 2022.

"In the sky"

James Densley is The Author of The Turbulent World of Middle East Sport, and he was surprised by FIFA’s decision on Wednesday. "I think this was a very wise decision," he told Al Jazeera from Indonesia's capital, Jakarta: "We’ve worked so closely in the past on the key areas of football, the AFC and the UAE - Egypt - we got to have a "really different problem"." "It’s a very crazy world, I mean, there’s the first time that a major sporting event is being held in the Middle East, and in fact in their backyard," he added.

Real Madrid accuse Mauricio Pochettino of lying

The two bids are the last remaining after Swiss city Sion, Japan's Sapporo, Austria's Graz and 1988 hosts Calgary in Canada all will be eliminated by the end of this month. They were checked against the criteria and local context and local government, and some of this led to cost savings and a more sustainable hosting model that is the new reality for the Games, Morisot said.

"The evaluation commission of the City of Stockholm would not be signing the host city contract should it be awarded the Games. Are we going to do it instead," said Morisot.

Real Madrid has reacted angrily to Mauri- cio Pochettino suggesting they turned down a request from the Spanish champions to have their training ground next week ahead of the Champions League semi-final on May 5. Spurs will train at Valdebebas on Thurs- day, before facing the Spanish giants in the se- day and Pochettino, in an interview with Spanish sports paper Marca, said if his team had asked Madrid they could have accommodated them.

A light-hearted part of the interview, Pochettino defended his remarks. “We would always stay at Valdebebas. Pochettino replied. “No, we are not in hotel more than two weeks. There has been asked? We have asked him Flavio Capello to change our hotel."

A laughing Pochettino then added: “He would say, ‘the day you make Madrid is when you can sleep there’. This is the only li- mental message no.

"Real Madrid has released a statement on Friday, insisting they had received no such request.

The statement read: “Real Madrid is surprised by the statements made by the Valen- tien hot costa coach mauricio Pochettino- n to the Spanish media about our club asking that his team could stay at the Ciudad de Real Madrid before the final of the Champions League.

"Real Madrid wants to make it clear that it has definitely not been the case that request occurred. Our club has absolutely no requests made to all the matches these made by UEFA. "Under the new FIFA Fair Play, Atletico Madrid, Liverpool and Tottenham Hotspur have also been asked to accommodate them in the facilities of the Ciudad de Real Madrid."

Pochettino was heavily linked with the post of replacing Julen Lopetegui as the coach of Real Madrid last season when Julen Lopetegui and then not getting to grips with the issue."

"Every single incident now is taking a bigger amplitude, a bigger concern," he said. "There are idiots in the field. There are idiots in the gallery. Every single incident is taking a bigger amplitude, and it is the same I think this is totally wrong."

"If you know your team is going to get damaged points, you are not going to say those racist remarks even though you should absolutely say them," he said.

"Zero tolerance"

FIFA Secretary General Fatma Samoura says the clearest message players can send to fans is to walk off the field of play.

"If you step outside the field of play, fans will not be able to reach your goal, and if you don’t watch your players, they will not be able to reach the goal," she added.

"Evil in society"

European football, are also under greater scrutiny from high-profile players calling for tougher sanctions for racist incidents. In particular, England and Manchester City striker Raheem Sterling has become an outspoken opponent of fostering and social media posts were no longer enough.

"It’s a shame on society for people to accept it," Samoura said, "explaining to them who have been associated with racism.

"When you are discriminated against, you are not supposed to be there. But they have to deal with it," she said.
Marc Wilmots officially named Iran coach

IRAN'S TEHRAN – Former Belgium coach Marc Wilmots has been officially named as new head coach of Iran national football’s team.

The 50-year-old coach signed a contract in Brussels on Wednesday until 2022 World Cup in Qatar.

The Persians started the competition with two wins against the Philippines and Iran came second and third respectively.

Ahmadzadeh parts ways with Slask Wroclaw

The 26-year-old player left the Polish football club Slask Wroclaw in July and played a total of 27 games in which he scored one goal.

Irfan Buz nominated to take charge of Tractor Sazi: report

After his footballing career, Buz began working as a football coach. From 1999-2008, he served a youth coach in German club Barisspor Hackenberg.

Graham Potter’s appointment as Brighton boss has brought in a wave of excitement among the fans but one player may benefit more than most.

After parting ways with Chris Hughton after the final game of the season, Brighton announced the appointment of former Premier League’s boss Graham Potter as their new manager.

Hughton’s sacking came as a massive shock after the wonderful work he had done with the Seagulls over the last few years. However, Brighton managed to win just twice since the turn of the year, which is unacceptable for any side in the Premier League.

Graham Potter’s appointment should come as fantastic news for Brighton fans and they can be hopeful of a completely different style of play next season.

Hughton’s philosophy of surmounting pressure and putting the opposition on the back foot turned out to be his downfall but Potter is sure to make Brighton a more aggressive side next season.

One player who will massively benefit from the appointment of Alireza Jahanbakhsh is the Italian Lippi returns as China coach

Jiayun Jia was unable to make the China World Cup finals in Russia in 2018. He stood down at the end of his contract following 3-0 loss of the hands of Iran at the Asian Cup and was replaced on an interim basis by Fabio Cannavaro for March’s China Cup match against Thailand and Uzbekistan.

However, back-to-back defeats in these games were followed by Cannavaro’s decision to not take up the role on a permanent basis, with the former defender choosing to remain at the helm of Guangzhou Evergrande.

Lippi’s first game back in charge will be a friendly match against the Philippines in Guangzhou on June 7 as the Chineseprepare for this year’s second round of qualifying for Qatar 2022, which kicks off in September.

Irish assistant coaches announced

PLDC – Iran newly-appointed coach Marc Wilmots has named his two assistants.

Spanish coach Manu Ferrera, who was appointed as the youth manager of AA Gent in 2014, has been named as Wilmot’s first assistant.

Thierry Verjans, who has also worked at Standard Liège and Gent, is another assistant coach.

He will be assisted by Bum Shank and a video and match analyst for Team Melli.

Ex-Belgium coach Marc Wilmots was officially appointed as Iran national football team head coach until the 2022 World Cup on Wednesday.

Ex-Inter coach Stramaccioni shortlisted for Esteghlal job

TASMIN – Former Inter Milan coach Andrea Stramaccioni has been shortlisted to take charge of Iranian club Esteghlal, Tutomrecocweek.com reported.

The 43-year-old coach has most recently worked at Belgian club Stade Liégeois.

Team Melli will also face South Korea five days later at World Cup Stadium in Seoul.

Iran are preparing for the 2022 World Cup qualifiers that begin in the second half of this year.

Iranian athlete Keyhani tests positive for doping

The Athletics Integrity Unit says Keyhani has been provisionally suspended after testing positive for EPO.

The contract runs until the end of the 2022 World Cup on Wednesday.

The former Belgian striker had travelled to Tehran last week and was expected to sign a $1.2 million (1 million euros) contract.

The embassy told AFP by telephone.

The former assistant coach between Mr. Wilmots and Mehdi Torabi (the president of the Iranian football federation),” a diplomat at the Iranian football federation, "has been provisionally suspended.

The former Belgian striker has brought in a wave of excitement among the fans but one player may benefit more than most.

After parting ways with Chris Hughton after the final game of the season, Brighton announced the appointment of former Premier League’s boss Graham Potter as their new manager.

Hughton’s sacking came as a massive shock after the wonderful work he had done with the Seagulls over the last few years. However, Brighton managed to win just twice since the turn of the year, which is unacceptable for any side in the Premier League.

One player who will massively benefit from the appointment of Alireza Jahanbakhsh is the 26-year-old player who left the Polish football club Slask Wroclaw in July and played a total of 27 games in which he scored one goal.

Irfan Buz, who has been reportedly nominated for this position.

Under World Cup-winning coach Fabio Capello, Akbar Torabi was vying with Arbxh for the award.

Team Melli will also face South Korea five days later at World Cup Stadium in Seoul.

Ali Reza Jahanbakhsh, who is one of the new stars of the Iranian national team, has been nominated for the award.

Team Melli had started the competition on high note.

The Persians started the competition with two wins against the Philippines and Iran came second and third respectively.

Iran lost to Qatar and the Philippines in the second day against the Philippines and Iran came second and third respectively.

Sunam and Thailand came fourth and fifth.

LOS ANGELES (AP) — In last bit of buzz, the "Big Bang Theory" topped the TV ratings for the season finale, pulling in 11.8 million live viewers. The back-to-back, two-episode finale of the popular comedy's 12th season was seen by 11.8 million live viewers Thursday night. Show creator Chuck Lorre executive produced the two-hour episode, which wrapped up the season. The finale was the top-rated show of the night by a wide margin and boosted CBS to the No. 1 spot in prime time. The finale revolved around shows' signature mysteries: a Big Bang was a serial killer on the loose that helped keep CBS the top network for much of its record run of 279 episodes, and the most viewed for a multi-camera series, as "Game of Thrones" was the highest-rated show in the history of premium cable with 11.7 million viewers. The show’s final episode, which aired April 18, saw the show's grand finale, with the ending leaving fans and critics divided. The finale was a ratings success, with over 4.5 million viewers, NBC’s "America’s Got Talent" was the No. 1 show on cable, with 11.2 million viewers, NBC’s "100" with 10.5 million and "The Voice" with 9.7 million. E! Entertainment’s "The Vow" and "Degrassi" also were among the top-ten shows. The finale saw a ratings drop from the previous week, when "Game of Thrones" was the top-rated show with 13.5 million viewers. The finale was a ratings success, with over 4.5 million viewers, NBC’s "America’s Got Talent" was the No. 1 show on cable, with 11.2 million viewers, NBC’s "100" with 10.5 million and "The Voice" with 9.7 million.
