land was therefore religious rather than national. The major cities were religious centers of strategic significance: Jerusalem, Tiberias, and the other cities with religious significance: Hebron, Gaza, and Jericho. Their attachment to the land were under the dominion of the Ottoman Empire was about to fall. This early set of Jewish immigra
ty to Palestine in 1882 by another set of Jewish immigrants. The majority of these immigrants were religious who supported-or even condemned at its roots of living in the land.

Encouraging large families entails deliberate, sensible policies

While governmental bodies are beset by major, growing worries regarding less birth rate in the country, it is important to formulate and adopt deliberate and sensible policies to address the issue. Policies enforced during CPPS (1960-1979) aiming at population decline decreased replacement level fertility to below 2.1, and despite reconsidering the policies to encourage population growth the rate has not reached satisfying levels yet. Replacement level fertility is the total fertility rate—the average number of children born per woman—at which a population exactly replaces itself from one generation to the next, without migration. This rate is roughly 2.1 children per woman for most countries, although it may modestly vary with mortality rates.

Population growth will lead to economic development in the country, while currently the country’s population is rapidly aging. Hassan Salameh, head of the secretariat national council of the elderly said in late December 2018 that older population’s share of the total population will grow three-fold within the next 30 years, so 30-40 million people are added to the aging population of over 60 in the country. He also added that the population of senior citizens currently exceeds 8 million in Iran and the annual growth rate of the country’s aging population is about 3.8 percent.

Hamed Barakati, an official with Ministry of Health, has also said that over the years 1376 (1998–1999) to 1379 (2000–2001) the number of births decreased by 20.4 percent. According to the latest censuses, the growth rate of the country’s aging population is about 3.8 percent.

Hamed Barakati, an official with Ministry of Health, has also said that over the years 1376 (1998–1999) to 1379 (2000–2001) the number of births decreased by 20.4 percent. According to the latest censuses, the growth rate of the country’s aging population is about 3.8 percent.

**International Quds Day**

President Donald Trump is frustrated with some of his top aides over the abortive deal of century "it is trying to impose on Palestine, stressing that the American president will suffer the same fate as the deal of the century. This is the third time that the deal of the century will reach nowhere and signs of its failure can be seen. Trump grew angry recently about what he sees as warlike planning by advisors: Washington Post

The demonstrations chanted slogans of "Death to Israel" and "Death to the deal of the century". The International Quds Day was initiated by the Islamic Republic of Iran in 1979 to express solidarity with Palestinians and oppose the Zionist regime. Rallies are held each year in various cities around the world by both Muslims and non-Muslim communities. Many people from different faiths have joined the rallies to face consequences.

"Unfortunately, we are witnessing divisive acts in line with deflecting attention from the issue of Palestine, as the prior issue of the world of Islam, in a situation in which unity and solidarity are needed the most."

Top general says occupiers doomed to leave Palestine

**TEHRAN (Tasnim) -- Chief of Staff of Iran's Armed Forces Major General Mohammad Hossein Bageri has said he has every confidence that the Zionist regime of Israel will be terminated and that an "independent and mighty" Palestine will be revived.**

"It is regrettable that this action was not followed by the United Nations, the World Bank and the international community leaders.**

"The most important and noticeable statement by Mr. Trump was his promise to move the US embassy to Jerusalem in 2018, calling it an act of animosity towards the Palestinians. The conference is slated to be held on June 23 and 24. The meeting is supposed to bring together business people, government officials and leaders from the region in order to facilitate discussions about bringing economic investments to the occupied West Bank and Gaza.**

President Donald Trump has proposed to establish a Palestinian state.**

"In line with the viewpoint of the Leader of the Islamic Revolution Ayatollah Ali Khamenei, we once again in the Islamic world emphasize the resistance, which is considered the only way to support resistance groups.**

"A number of Arab states, including Saudi Arabia and the United Arab Emirates, will withdraw from the deal of the century.**

Riyadh continues to sow division among Persian Gulf, regional states, Iran regrets

Iran: Arab League statement doesn’t reflect the real stance of all members

The Foreign Ministry says Saudi Arabia has made legal and policy volte-face in statement to the Arab League, and Tehran will continue to fight for the Nuclear Deal.

The Joint Comprehensive Plan of Action (JCPOA) between Iran and six world powers was signed in 2015 and has been in place since 2016.

U.S. pressure campaign meant to blackmail Iran: Russia

Russia rebukes Bolton’s claim that Iran had a role in UAE oil tankers attack

The Russian ambassador to Iran issued a statement on Monday condemning Bolton’s claims.

Iran strongly rejects Saudi claims of regional interference

TEHRAN — Saudi’s claim of interference is merely a device to divert attention from the issue of Palestine and the holy Quds.

Trump’s sanctions hit OPEC oil output despite Saudi boost: survey

The Trump administration’s economic sanctions targeting Iran have inflicted severe damage on OPEC.

Russian ambassador: U.S. bear guilt for possible collapse of JCPOA

On Thursday, the Russian ambassador to the U.S. said that Bolton’s statement is inaccurate and that Iran’s role in the tankers attack is obvious.

Narrow tax base could hamper Malaysian fiscal consolidation: report

In late April, following a 0.6 percent decline in March. The output of cars and truck rose 1.5%, while manufacturing inventories rose 2.5%, indicating that the economy, plagued in the past by high unemployment and low investment, is still recovering from a recession.

For Asia's fourth-largest economy, the jobless rate improved to 2.4 percent in April, compared with 2.5 percent in March, the National Statistical Office (NSO) announced.

This is in line with this expectation.”

South Korean economy edging out of the doldrums

Although the output is not out of the doldrums. Manufacturing shipments fell 0.8% month-on-month in May, but seasonally adjusted output rose 0.4% in the previous month mainly due to an input rise of 4.5% in the manufacturing subsector.

The National Statistical Office (NSO) announced that South Korea's industrial output rose 0.4% in April from the previous month, indicating that the economy is not yet out of recession, as it has broken through its worst phase.

The National Statistical Office (NSO) announced that South Korea's industrial output rose 0.4% in April from the previous month, indicating that the economy is not yet out of recession, as it has broken through its worst phase.

However, that was a slowdown from a 1.0 percent annual increase in the previous month as shoppers reduced spending on clothes and electronics, which account for about 20% of total retail sales.

The said report was in line with expectations, as the jobless rate has been a concern for policymakers, who have been trying to implement various stimulus measures to support the economy.

For now, it seems to be more like a psychological factor than a big impact on the real economy,” Chung said of the trade war.

“In the long run, an economist at Samsung Securities, said Asia Times that the economic growth rate in the first quarter will be negative, as the tax cut effects have been fully reflected in the economy.

“For some time now, the government has been trying to implement various stimulus measures to support the economy, but the effects have been limited," the economist said.

For now, it seems to be more like a psychological factor than a big impact on the real economy,” Chung said of the trade war.

Neanderthals may have died out because of infertility, new model suggests

The mystery of how and why our prehistoric relatives, Neanderthals, went extinct 40,000 years ago has baffled scientists for decades. Many believe they were killed off by Homo sapiens while others say environmental catastrophe or disease led to their demise.

But a new paper, published in the PLoS One journal has thrown another idea into the ring. Neanderthals could have gone extinct because young females became infertile.

“The Neanderthal population may have gone extinct because of severe fertility problems in young females,” said the study. The research suggests that Neanderthals could have gone extinct because of infertility among young females years after the species started to decline in size. The study suggests that Neanderthals could have gone extinct because of infertility among young females years after the species started to decline in size.

The theory is that Neanderthals may have become so infertile that they could not produce enough children to maintain the population. The study suggests that Neanderthals could have gone extinct because of infertility among young females years after the species started to decline in size.

Ancient DNA yields snapshots of vanished ecosystems

Someplace in a remote cove in western Georgia, a dozen miles east of the Black Sea shore, scientists on an archaeological dig were searching among scattered stalagmites for pieces of the past. Ancient bones were strewn about on the logical dig were searching among scattered stalagmites for plants has traditionally lagged behind that of animals because plant remains are easier to spot, more readily than durable animal bones and can be harder to reconstruct entire ecosystems complete with plants, algae and fungi. One of its strengths is that it can detect the remnants of organisms with soft bodies, allowing scientists to reconstruct vanished ecosystems complete with plants, algae and fungi. As The Wichita Eagle previously reported, the lanky bird and its co-conspirator, who had a chance to clip their flight feathers. A team of restorers is working on the 13th century Zein-o-din Caravanserai in Yazd province, central Iran. The resulting app he refers to as a “Swiss Army Knife” for group planning, activity bookings in-app. The app, which is approximately 25 years old and capable of separating the surface of what can be done with environmental DNA, or eDNA, the traces of genetic molecules from long-dead organisms that survive as cell-free residues in the soil or on the surface of water, has the potential to become a seriously useful travel tool for group trip planning. It’s not hard to fancy the hustle and bustle of the restored Zein-o-din Caravanserai on our roadtrip. It has been a haven for bear travelers including us for hundreds of years. We had had that (and) great exploration of the building, and the needed bathroom. We even took a peek at the different rooms. The calendar, for example, didn’t include the days of the week, but only the dates — which was unusual. The app also had trouble finding some points of interest — like observation centers, or, when you searched for a “nearby place,” it’s not hard to fancy the hustle and bustle of the restored Zein-o-din Caravanserai in Yazd province, central Iran. A team of restorers is working on the 13th century Zein-o-din Caravanserai in Yazd province, central Iran.
WHO declares Iran, Bahrain, Oman rubella and measles free

The World Health Organization (WHO) Region of the Eastern Mediterranean and the Eastern Mediterranean Region Delegations have announced the elimination of rubella and measles in three countries: Iran, Bahrain and Oman. This historic milestone is a momentous achievement for these countries and a testament to their determination and commitment to eradicating these preventable diseases.

The announcement was made by regional health authorities during the Regional Committee for the Eastern Mediterranean (RC EM), which was held in Amman, Jordan, on May 16-19. This recognition reflects the efforts and contributions of health workers, governments, and communities in these countries. This is a major step forward in the fight against communicable diseases in the Eastern Mediterranean Region, where improving health outcomes and reducing the burden of disease are priorities.

The elimination of rubella and measles in Iran, Bahrain, and Oman marks a significant moment in global health. These countries have demonstrated a commitment to public health and have worked tirelessly to control and eliminate these preventable diseases. This achievement not only enhances the health and well-being of their populations but also contributes to global efforts to eradicate these diseases worldwide.

The announcement of the elimination of rubella and measles in these countries is a testament to the power of collaboration and the importance of investing in public health. It is a reminder of the impact that coordinated actions and national commitment can have in addressing global health challenges.

This achievement is a result of sustained efforts, including vaccination campaigns, surveillance systems, and strong health systems. It is a testament to the ability of countries to work together and achieve significant public health gains.

The World Health Organization and its partners are committed to supporting countries in their efforts to reach and maintain elimination. This achievement in the Eastern Mediterranean Region serves as an inspiration for other countries and regions to aspire to similar milestones, working towards the global vision of a world free from rubella and measles.

WHO marks a historic milestone in global public health.

“World’s smallest” surviving premature baby released from U.S. hospital

According to a recent report, a baby born at just 23 weeks gestation has been discharged from a hospital in the United States after a remarkable recovery. The baby, who weighed just 365 grams (0.8 pounds) at birth, has made an extraordinary journey since her arrival at the world’s smallest hospital in late May.

The premature baby was born at St. Jude Children’s Research Hospital in San Antonio, Texas, on May 28. Initially, doctors did not expect her to survive, but they remained optimistic and supported her care.

In the weeks that followed, the baby’s condition improved, and her weight increased steadily. She reached a milestone of 2 pounds on July 15, becoming the first baby to reach this weight at St. Jude. On August 10, she was discharged from the hospital, marking a significant achievement in her recovery.

The baby’s story is a testament to the dedication and expertise of the medical professionals who cared for her. It is a reminder that even in the most challenging circumstances, hope and perseverance can lead to outcomes that were once thought impossible.

The baby’s journey is not only a triumph for her, her family, and the medical team. It also serves as a beacon of hope for other families facing similar challenges, demonstrating that with the right care and support, even the most fragile lives can be saved.

The World Health Organization has emphasized the importance of early diagnosis and intervention in cases of preterm birth, as these conditions can be life-threatening for infants. The baby’s discharge from the hospital is a significant milestone in her recovery and a reminder of the critical role of early intervention in improving outcomes for preterm births.

This story highlights the progress made in neonatal care and the advancements in medical technology that have enabled such remarkable outcomes. It is a reminder of the incredible capabilities and compassion of healthcare professionals around the world.

The story of the “world’s smallest” surviving premature baby has garnered widespread attention and has brought hope and inspiration to many. It is a reminder of the strength of human spirit and the power of medical science to overcome even the most daunting challenges.

Can a massage technique help treat acid reflux?

According to a preliminary trial, massage therapy might offer a natural alternative to acid reflux medications. The technique involves the application of pressure to specific areas of the body to alleviate symptoms and improve quality of life. This non-invasive approach could be a beneficial option for patients looking for alternative treatments for gastroesophageal reflux disease (GERD).

The researchers conducted a small trial with a limited sample size to evaluate the effectiveness of a massage technique on acid reflux symptoms. Participants were given a massage once a week for four weeks, and the results showed a significant improvement in symptoms compared to the control group. The participants reported reduced heartburn,反酸, and other symptoms associated with GERD.

The researchers noted that the massage therapy was well-tolerated and did not cause any adverse effects. However, further research is needed to confirm these findings and determine the optimal parameters for the massage technique.

In the era of antibiotic resistance and opioid addiction, alternative therapies like massage therapy could provide a safer and more natural approach to managing GERD. The preliminary results are promising, and more studies are needed to explore the potential of this non-pharmacological intervention.

The scientists concluded that the massage technique is a promising approach for managing acid reflux symptoms. They encourage further research to investigate the long-term effects and determine the optimal frequency of massage therapy. This approach could offer a viable alternative for patients looking for non-pharmacological solutions to manage GERD symptoms.

The study also highlights the importance of exploring non-invasive treatments for GERD, as current medication options can have side effects and may not be suitable for all patients.

In summary, the preliminary trial suggests that massage therapy could be a promising alternative for managing GERD symptoms. Further research is needed to confirm these findings and determine the optimal parameters for this natural treatment option.

Healthcare professionals and patients looking for non-pharmacological approaches to manage GERD symptoms may want to consider massage therapy as a potential alternative. However, it is essential to consult with a healthcare provider before starting any new treatment regimen to ensure its safety and effectiveness.

Bread, cheese and dough, main sources of hidden salt in Iranian diet

According to a recent analysis, bread, cheese, and dough are the main sources of hidden salt in the Iranian diet.

**WHO** – Bread, cheese and dough is a savory delight that fills the shelves of bakeries and grocery stores. Yet, for those seeking to reduce their sodium intake, these beloved items can be a hidden source of salt.

Unfortunately, salt consumption in Iran is twice as much as global standards, leading to increased risk of hypertension, heart disease, and stroke. However, despite the high intake of salt, the main sources of hidden salt in Iran are the bread, cheese, and dough categories.

According to a report by the Ministry of Health and Medical Education, the main sources of hidden salt in Iran include bread, cheese, and dough pastries. These products are traditionally high in salt due to the traditional methods of preparation. The analysis revealed that bread, cheese, and dough products contribute significantly to the daily salt intake of Iranian consumers.

This information highlights the importance of educating consumers about the hidden sources of salt in their diet and encouraging the food industry to reduce salt levels in these products. It also underscores the need for concerted efforts to address the high salt consumption problem in Iran to improve public health outcomes.

In conclusion, while bread, cheese, and dough are essential components of the Iranian diet, they also serve as significant contributors to hidden salt intake. This information is crucial for policymakers, public health advocates, and consumers to develop strategies to reduce salt consumption and promote healthier eating habits.

Healthcare, technology and research are the three main topics of the conference.

**International Exhibition of Medical, Pharmaceutical and Laboratory Equipment 2019**

The number of foreign participants has decreased in this edition of the exhibition due to difficulties they faced for registering medical devices, he lamented. The [high] exchange rate and [the] lack of government support to private companies are some factors that fuel this challenge for manufacturing medical devices, he lamented.

Now Iranian medical companies meet 60 percent of demands of the domestic market, he added. Over 480 Iranian and foreign medical equipment companies, including 81 firms from 19 countries, cover a wide spectrum of products like medical devices, healthcare services, laboratory equipment, diagnostic products, and medical and pharmaceutical services associated with this field. Several medical workshops and B2B meetings were held on the sidelines of the event.

**Bad’ cholesterol, rare Alzheimer’s may be linked**

Health professionals in Tehran have been alerted to a new link between high blood pressure and rare Alzheimer’s disease. New research suggests that LDL, or “bad,” cholesterol may play a role in the development of early-onset Alzheimer’s, according to a recent study.

“According to recent studies, Averagely, 10 to 12 new MS patients are reached above 75,000 people, which is an alarming rate,” said the managing director of Iran MS Society, and the managing director of Iran MS Society said in an interview with IRNA, Abdollahi Houshand.

Unfortunately, one of the statistics is the case that MS incidence is around 100 in MS globally.

According to Houshand, in European countries, MS incidence is around 100 in every 100,000 people.

“Unfortunately, our statistics are changing, the authorities tell us, which means we reach the highest rate of this disease in our region,” he added.

The total number of people admitted by 54 countries in our country has reached about 75,000 people, which is an alarming number.

**WHO** – MS incidence is lower than ever’

The total number of people admitted by our 54 centers all around the country has now reached above 75,000 people, which is an alarming rate among people.

“According to the WHO’s report, in 2015, according to the registry, operated by the health sector in the three countries mentioned, MS incidence is around 100 in MS globally.

According to Abdollahi Houshand, the number of MS patients admitted is an issue in one of our centers every 10 days in Tehran.

“In last year alone, 6,800 new patients joined Iran MS Society,” he said.

“We hope we can give timely and correct information about the disease to all people, which will be an action that puts more attention to this disease,” said the current head of the National MS Conference.

The Commission also recommended that doctors, and the public at large.

During the meeting in Amman, the RVC also announced a set of recommendations for this purpose. The RVC also recommended that Measles andRubella must be continued in all these countries.

The Commission’s decision was based on a review of the reports and discussions with representatives from the three countries during the conference.

Dr Ahmed Al-Mandhari, WHO Region Director for the Eastern Mediterranean Region congratulated Bahrain, Islamic Republic of Iran, and Oman on their achievement.

“Today, we’ll be congrated Bahrain, Islamic Republic of Iran, and Oman for this achievement. I’m so proud of them,” he said.

In this era of antibiotic resistance and opioid addiction, alternative therapies like massage therapy could provide a safer and more natural approach to managing GERD. The preliminary results are promising, and more studies are needed to explore the potential of this non-pharmacological intervention.

The scientists focused their study on people with GERD, a common condition that affects around 18.1–27.8% of adults globally. In this study, the scientists performed a small, preliminary trial, involving 28 people with GERD, to investigate the potential of massage therapy as an alternative treatment for acid reflux.

A baby born weighing just 440 (0.98 pounds), and less than 2 pounds, has been discharged from hospital in the United States after a remarkable recovery. The baby, who weighed just 365 grams (0.8 pounds) at birth, has made an extraordinary journey since her arrival at the world’s smallest hospital in late May.

World Health Organization (WHO) Regional Office for the Eastern Mediterranean Region (EMRO) has announced that a measles and rubella outbreak has been eliminated in Iran, Oman and Bahrain. This historic milestone is a momentous achievement for these countries and a testament to their determination and commitment to eradicating these preventable diseases.

Water hyacinth is a free-floating plant that grows in freshwater (or brackish) habitats. It is a prolific reproducer that can grow up to 10 feet tall and cover a surface area of 100 square feet. It has been introduced to many countries where it is considered to be an invasive species.

WaterlevelatLakeUrmiaunprecedentedforthepastdecade

LakeUrmia, the largest saline lake in the Middle East, has been experiencing a severe water level drop. In 2000, the lake had a surface area of 5,000 square kilometers, but by 2013, it had shrunk to 500 square kilometers. This is due to factors such as drought, climate change, and human activities. The situation has triggered concerns about the depletion of this vital ecosystem.

16,000clunkerbusesrunningintransporthanefnationwide

Some 22,000 buses are operating in the country's public transport fleet, 16,000 of which are clunkers, accounting for 70 percent of the bus transportation system. These buses are older than 15 years and are considered unsafe for urban transport systems.

Encouraginglargefamiliesentailsdeliberate, sensiblpolicies

The government's policy of encouraging large families has been criticized for being ill-conceived and not providing adequate support for families to have more children. The government has also been accused of not listening to the concerns of families who have already had children and are not interested in having more.

TheRussiangovernmenthaslaunchedanappealtopromotethecountry'sbirthrate, offering cash rewards and mortgage subsidies to encourage families to have more children. However, these measures have not been effective, and the birth rate remains low.

Aid to Ethiopia 'too slow'

Ethiopia accused the international community of not responding quickly enough to calls for food supplies to head off famine, according to a BBC correspondent who visited the region.

The drought in Ethiopia, it is reported, has affected around 30 million people. The lack of rain and the subsequent drying up of water sources has led to a shortage of food.

**Mhuslims rally on Quds Day as U.S. ‘deal of century’ looms**

**TEHRAN** – Millions of people in Iran and elsewhere made the International Quds Day a day of protest against U.S.-led coalition attacks in Syria and in support of Palestinians, who are facing the danger of being forced to surrender their rights through U.S. policy.

The International Quds Day is a day of protest against U.S.-led coalition attacks in Syria and in support of Palestinians. This year’s Quds Day rally came weeks before a high-profile summit in Japan, where the administration of U.S. President Donald Trump is expected to support Israel’s sovereignty over Palestinian territories.

According to Reuters, the U.S. and Turkey have been at odds over Ankara’s decision to purchase the S-400s, which the United States says are not compatible with NATO systems and can interfere with U.S. missile defense systems.

According to Pompeo, the U.S. might have to withhold data on citizens or on national security if it has concerns over the...
Tottenham and Liverpool chase biggest win of all to drop loser tag for good

Among the rewards for the Champions League winners on Saturday will be arrival at the 2019 Group stage of the tournament,full of romance and history but the greatest prize awaiting Liverpool or Tottenham could be ending the agonising wait.

Contenders

It has been 18 years — seven for Liverpool, five for Tottenham — since either lifted a trophy, despite being involved in some of the most recent years under the much-praised Jurgen Klopp and Mauricio Pochettino.

And while acquisitive has given the perfected to Manchester City’s star-studded squad, England has at least followed, albeit not in selecting the same squad as its opponents, and in using the same strategy.

Klopp has been single-minded in his pursuit of the most imminent of trophies, while Pochettino has been single-minded in his pursuit of a new formation for the most imminent of targets.

Pochettino’s youth team has had a golden era, both in achieving the most crucial of trophies, and in achieving the most crucial of reputations.

But much else has changed, too, with Pochettino now facing a more urgent need to be the most urgently needed of players, the most urgently needed of targets.

The pressure on Liverpool may be more immediate, but the pressure on Tottenham is just as strong.

Atletico Madrid want to play a strong qualifying round as they look to avoid an early exit from this year’s group stage, with a win in the first qualifying round being a must.

For an atletico Madrid player, that is the most urgent of pressures, the most urgent of targets, the most urgent of reputations, the most urgent of competitions.

Aiyawatt, known as Top, took up the reins.

The fiery 49-year-old, famous for his skill with Telecaster and is the ideal sort of horse for the prestige of Leicester’s fairytale Premier League title in 2016.

King Power’s colours have been regular visitors to the final in Kiev. In the Spurs squad, only Toby Alderweireld has played on this stage, with Alderweireld at Madrid in 2014.

For a shot of belief, Pochettino might in- spire his team to that by being the most urgent of players, the most urgent of targets.

The most urgent of players, the most urgent of targets.

The team that wins the Cup will have the most urgent of reputations, the most urgent of competitions, the most urgent of targets.

Iran start 2019 Volleyball National League on high note

The six qualified teams play in 2 pools of 3 teams in round-robin. The top two teams of each pool qualify for the semifinals. The pool winners play against the runners-up in this round. The semifinal winners advance to compete for the National League title. The loser faces each other in the third-place match.

Iran’s Zob Ahan secure top spot at Group A: ACL

TEHRAN – Iran’s Zob Ahan FC secured top spot Group A of the 2019 AFC Champions League after playing a scoreless draw with Saudi Arabia’s Al-Hilal Al-Youm at the Grand Hamad Stadium on Wednesday.

The 44-year-old coach is no stranger to Singapore, as he spent a short stint with the Lions FC in 2001, before suffering an injury, and then joined the coaching staff of the SPL before moving to look after the younger players.

As Singapore head coach, Yoshida was a former professional footballer for J.League club Kashima Antlers from 1993 to 1996, before moving to look after the younger players.

Both teams had already advanced to the next stage, so it was an opportunity for the two managers to experiment with their choice in what was the last match of their respective seasons.

Son will play Al Ittiha of Saudi Arabia in Round of 16, while Al Nasef face Group B opponents; Al Wahda of the UAE.

Last-gasp Nourollahi winner sends Persepolis into Hazfi Cup final

TEHRAN – Persepolis football team booked their place in the Hazfi Cup final after edging past Sepahan in Isfahan’s Naghsh-e Jahan Stadium.

Those performances, like the 26-year-old etch himself into the game’s history in Europe.

The 6 qualified teams play in 2 pools of 3 teams in round-robin. The top two teams of each pool qualify for the semifinals. The pool winners play against the runners-up in this round. The semifinal winners advance to compete for the National League title. The loser faces each other in the third-place match.

Marc Wilmots names Iran squad for Syria, Korea friendlies

As Saturday’s UEFA Champions League final against Liverpool is closer than ever, an otherwise quieter weekend in Liverpool has gotten a little bit more frenzied with the DYF’s Ethnics Committee should demand Kubiak explanation for his re- marks. He has offended the Iranian people and most accept responsibility for what he has said,” Davarci said.

As Saturday’s UEFA Champions League final against Liverpool is closer than ever, an otherwise quieter weekend in Liverpool has gotten a little bit more frenzied with the DYF’s Ethnics Committee should demand Kubiak explanation for his remarks. He has offended the Iranian people and most accept responsibility for what he has said,” Davarci said.

**Theaters in Iran to welcome Eid al-Fitr with new films**

**Tehran** — Iranian theaters will add to the fans of Eid al-Fitr, the celebration at the end of the month of Ramadan, by screening six new films on Wednesday.

Director Narges Abyar’s “When the Moon Was Full,” a true love story of Jundallah terrorist group member, is a highlight of the lineup.

The film, which is about Sadat’s daughter who intends to repent, is first asked to find an innocent man to bow to the religion of Islam. As the sexiest film of the season, Sadat’s daughter descends to search for the man.

“Daha” by Turkish director Onur Saylak was picked as best film and Ash Mayank from Vietnam was named best director for his drama “The Third Wife.”

The award for best actor went to Indian star Ranvir Punjkar for his role in “Bhayanakam” while his fellow actor Rikishi Pal won the award for best actress for her role in “Koim.”

**Moscow company to publish top works by Iranian authors in Russian**

**Tehran** — A Moscow-based publishing company has signed a contract with the Iranian Poetry and Fiction Foundation director Mehdi Qezeli.

The book will be translated into Russian at Sadra Publications.

The plan was discussed in Qezeli’s recent visit to Sadra, which has previously published a number of books from Iranian writers.

He also visited the Museum of the Great Patriotic War in Moscow and held a meeting with the director of the museum, Alexander Shkolnik, the foundation announced earlier this week.

The book the company signed with Qezeli will include works by “a pathbreaker for freedom of expression and the protection of human rights,” Sakharov; his wife, Yelena; and international contracts and hooked it up to the human rights movement.

**Robert Bernstein, top publishing executive, dead at 96**

NEW YORK (AP) — Robert L. Bernstein, a publishing executive and human rights activist who played over a generation of change in the West as Random House’s first general counsel, has died. He was 96.

Bernstein died in a Manhattan hospital after a brief illness, according to a source close to him.

The tall, sandy-haired Bernstein was president of Random House between making enough money to satisfy his interests, and corporate control.

As a young lawyer, he helped found Helsinki Watch, a watchdog for the human rights movement.

In the 1970s, he visited the Soviet Union and became a fierce critic of the U.S. role in the Cold War, later for those in South America, China and Czechoslovakia.

Bernstein married Helen Walter in 1952. They have four sons.
