Iran army says missiles can hit Tel Aviv

U.S. grants Iraq new Iran sanctions waiver source

By Payman Yadavidi
TEHRAN — Referring to his justifications against Iran after the suspicious attacks on oil tankers in Oman Sea, Qatar University research assistant says international community is reluctant to accept US hypothesis aiming to boost its military presence in the Middle East. While the Japanese Prime Minister was visiting Iran after a decade and many expected even more reduction of the tensions in the region due to his visit, in another suspicious and provocative move two large tankers were hit by explosions in the Sea of Oman on Thursday, a move that can intensify the tensions even more than before.

Following the attack, US Secretary of State Mike Pompeo hastily accused Iran of carrying out the attacks without providing any evidence to back up his accusations.

In this regard, Iran rejected US Secretary of State Mike Pompeo’s anti-Iran accusations, saying the suspicious nature of the recent attacks on two oil tankers in the Sea of Oman is “not funny or ridiculous but alarming”.

To know more about the issue we reached out to Dr. Luciano Zacurra, research assistant professor in Qatar University.

The US administration has hastily accused Iran offering behind-the-scenes attacks on two tankers in Oman Sea. How do you assess validity of the accusations?

A. After one month of the previous incident in Fujairah port, which so far has not been clarified, and with the lack of proper evidence apart from a released video which actually is not demonstrating anything, I believe the US administration is rushing too much to reach the conclusions that only Iran can be behind those attacks. It is evident that the current US government, mainly under the leadership of Mike Pompeo, is trying to make a case against Iran, with the objective to justify the withdrawal from the JCPOA, and in order to increase the military presence in the region, the so-called Low-profile doctrine, which the US wants to bring back to the region.

Some of the long-established folklores linked the arrival of seagulls with the long-legged birds. In Iran, evidence of seagulls and other waders region of Iran storks in meliads on its mudflats even by constructing bridges with high platforms, which not only benefits the birds, but attracts many tourists to the village starting and summer expressly to see the storks.

The storks were also recorded in Islamic beliefs which held that the birds were thought to lay on pilgrimage to Mecca, where they fed for after staying in Iran.

Israel responsible for oil tanker attacks: ex-diplomat

U.S. allies bald at blaming Iran for tanker attack

Israel’s ambassador to the United Nations, Ron Prosor, on Thursday called for public comments on ways to initiate, improve and complete certain legal processes, regulations and reforms.

Prosor also warned the country’s decision-makers to make a miscarriage of justice by ruining the opportunity for due process of law, as people through the internet, echoing remarks by Leader of the Islamic Revolution, Ayatollah Seyyed Ali Khamenei (may Allah rest his灵魂), that the irresponsible offer provided by the cyber space should be avoided.

In a decree in March, Ayatollah Khamenei had vowed that the judiciary would become “a popular, revolutionary and anti-corruption” body.

The top diplomat also said making the move calls for public comments on ways to initiate, improve and complete certain legal processes, regulations and reforms.

A day after two oil tankers were attacked in the Gulf of Oman, some U.S. allies were reluctant to explicitly blame Iran for the incident, as conflicting reports on who was behind the attacks emerged.

On Thursday morning, two commercial oil tankers were hit in the Gulf of Oman, prompting the evacuation and rescue of dozens of crew members.

The United States has blamed Iran for the attacks. In an interview with Iran Online, Asef said Iran believes the most from such accusations against Iran, hence “logically the Zionist regime is the agent of this incident.”

“Think of the distance of such individual region are done by the Zionist regime and this has no hidden dimensions, he stated.

Asef, who served as Iran’s ambassador to France and Foreign Ministry spokesman, argued that the United States was unable to draw the Islamic Revolutionary Guard Corps into a tense and anti-television atmosphere to justify its stance against Iran.

Asef’s remarks come following reports of the U.S. Central Command formally blaming Iran for the attacks.

Japan’s government said both vessels were carrying Japanese and Norwegian crews.

The attacks come after the UK government conducted its own investigation into the incident and found that Iran was “almost certainly” behind the attacks.

But other U.S. allies, which have parted ways with Washington over its withdrawal from the 2015 nuclear accord with Iran, haven’t gone so far as to explicitly blame Iran for the incident, as conflicting reports on who was behind the attacks emerged.

Some U.S. allies may not “want to be seen as being dogmatistic with U.S. administration and say that video evidence is not sufficient by itself,” he told reporters on a visit to Oso, Japan.

Some U.S. allies were reluctant to blame Iran for the tanker attacks, the government’s rhetoric and who benefit

Tehran had earlier warned against rushing to blame the United States, saying the incident should not be used to shore up tensions with Tehran.

The US media and politicians are expected to intensify pressure on Iran in the wake of the attack.

“I would be surprised if the U.S. was not trying to pressure Iran right now,” said the source.

In the meantime, the government’s rhetoric of "anti-Iranian sense," the agency quoted Russian Deputy Foreign Minister Sergei Ryabkov as saying.

On Thursday, Iran’s Foreign Minister Mohammad Javad Zarif condemned U.S. accusations that Iran was behind the attacks and called for an investigation to establish the facts about the attacks.

"The assessment of the United States government that the Islamic Republic of Iran is responsible for the attacks that occurred in the Gulf of Oman," Pompeo said.

"The attacks occurred within hours of Thursday, and a State Department briefing on Friday. "Zarif retweeted Pompeo’s allegations that Iran was to blame, saying the incident should not be used to shore up tensions with Tehran.

"We can understand what is being shown, but Iran is a sovereign nation," he said.

"Our assessments and forensics," he said.

"If there was any damage to a vessel, it should be done by the UN Security Council with regard to the upcoming parliamentary elections.

"The Council for Political, Legislative and Administrative Affairs, chaired by former Interior Minister Parviz Mousavi, has proposed holding electronic elections, its spokesman Mohammad Eslahati reported.

"We have seen some countries in the region and the world that studies behind the scenes behind the Trump administration," he added.

"Japan’s government has said both vessels were carrying vessels not tankers and a U.S. military official said the explosions were likely the result of a terrorist attack.

"IAEA’s report on the role of Iran in Afghan peace talks, saying the incident should not be used to shore up tensions with Tehran.

"The oil tankers attacked in the Oman Sea are ‘almost certainly’ behind the attacks.

"The UN chief in a Friday statement underlined the need for the Security Council to order an investigation to establish the facts about the attacks.

"It’s very important to know the truth and it’s clear," he stated.

"The oil tankers attacked in the Oman Sea are ‘almost certainly’ behind the attacks."
Global economy: on the edge of recession

Global trade flows are faltering in all major regions as the world economy flounders with recession the first time since 2008-09, which will feed into consumption, especially amid slowing data such as US, China and Europe. According to Goldman Sachs, freight volumes handled through major ports such as Long Beach and Singapore, as well as air cargo handled through hubs such as Hong Kong, Munich, London and Frankfurt are either flat or down compared with 2018.

Hong Kong International Airport, the largest cargo hub in the world, saw volume fall more than 1 percent in the three months from March to May compared with a year earlier. London’s Heathrow reports cargo down 4.5 percent between March and May compared with the same period a year ago.

Germany’s Fremont has seen volume fall almost 3 percent, while at Telsem’s Limassol International volumes were down 5.7 percent compared with 2018's levels.

Airfreight is only one for the most reliable and timely commodities but is generally a leading indicator for the rest of global trade, according to a global leading indicator for the economy. The global economy might still avoid an outright recession. In its report, The Organisation for Economic Co-operation and Development (OECD) revised its growth forecast for the eurozone in 2019. The following are key excerpts from the report.

Several industrial projects inaugurated in southeastern Iran

TEHRAN – The 15th Iran-Russia Joint Economic Committee meeting was attended by the Minister of Industry, Mining and Trade Rana Bahrami and his counterpart, Prime Minister Mikhail Mishustin.

The competition aimed at teaching the next generation about the exchange and development as well as the creation of entrepreneurship and job creation.

The 15th Iran-Russia Joint-Joint Economic Committee Meeting kicks off today

Announcement of the 15th Iran-Russia Joint Economic Committee Meeting kicks off today. The bank saw a -3.6 percent growth for the year, despite a reduction in the average exchange rate of 3 percent.

The exchange rate of the rial against the dollar, the euro and the yen has continued to increase, causing inflation in the market. The government is considering measures to control the exchange rate.

The government has raised the rates of the national currency to protect the country from the impact of the sanctions. The Central Bank of Iran has raised the rates of the national currency to protect the country from the impact of the sanctions.

**IRENEX to hold 3rd round of heavy crude oil offering on Tuesday**

The French government on Friday added to its commitment to energy security, announcing plans for an offering of 536,000 barrels of heavy crude oil through the IRENEX platform, a move that is expected to offer a preview of the volume and quality of crude oil the country’s stock market.

The announcement follows weeks of tension in the oil market, following the attack on two oil tankers in the Gulf of Oman and the subsequent rise in oil prices. The offer is part of the French government’s efforts to ensure a steady supply of crude oil to the country’s refineries and power plants, especially during the peak demand season.

The offer will be the third such offering since the beginning of the year, and is expected to attract interest from both domestic and international buyers. The offering will be conducted through an electronic platform, which will allow buyers to submit their bids online.

The offer will be open to buyers who have previously participated in IRENEX offerings and who meet the criteria set by the French government. The offering will be conducted in two phases, with the first phase starting on Tuesday and the second phase on Wednesday.

The offering will be conducted in two phases, with the first phase starting on Tuesday and the second phase on Wednesday.

**OPEC and its partners start increasing oil production to keep the market well supplied and prevent oil prices from rising too high.**

OPEC and its partners have started increasing oil production to keep the market well supplied and prevent oil prices from rising too high. The decision is aimed at balancing the market and ensuring that oil prices remain stable.

The move comes amid concerns that a sharp increase in oil prices could lead to inflation and other economic problems. OPEC and its partners have been closely monitoring the market and adjusting their production levels to meet the changing demands.

The decision will be reviewed on a regular basis to ensure that the market remains well supplied and that oil prices remain stable. The monitoring will include regular consultations among OPEC members and their partners, as well as ongoing analysis of market conditions.

---

**Gazprom CEO calls for end of OPEC+ oil cuts**

Gazprom CEO Miller has called for an end to OPEC+ oil cuts, saying that the production cuts have hurt the global oil market and that the time has come to start increasing production.

Miller said that the OPEC+ oil cuts have been a “disaster” for the global oil market and that they have led to a sharp increase in oil prices. He said that the time has come to start increasing production to bring oil prices back down.

Miller’s comments come as oil prices remain high and concerns persist about the impact of OPEC+ oil cuts on the global economy. Many analysts believe that the oil cuts have contributed to the recent surge in oil prices.

---

**Argentina LNG exports positioned to meet peak demand**

Argentina LNG exports are positioned to meet peak demand, according to recent reports. The country’s LNG exports are expected to reach record levels, with the potential to exceed 850,000 tons per year.

The increase in LNG exports is due to the completion of new liquefaction plants and the expansion of existing facilities. The country’s LNG production is expected to increase by 50% in the next few years, with new plants coming online and existing facilities being expanded.

Kushner as a colonial administrator: let’s talk about the ‘Israeli Model’

By Ronny Barnot

ANTIVAR — In a TV interview on June 3, the news outlet "Axios" on the HBO channel, Jared Kushner opened up about the ongoing Israeli-Palestinian dispute, revealing that he had no knowledge of the release of Israeli soldiers currently held in Israeli jails.

As much as we get closer to presidential elec-
tions, we get further away from the idea of a two- state solution, and a fair and just peace deal for both peoples. The Trump administration has been working hard to bring this about, but the lack of progress has cast serious doubts on the prospects for a lasting peace.

According to the new Axios poll, Democrat candidates are at odds, with Warren leading at 19% and Sanders a close second at 18%. Harris, Biden, and Buttigieg trail behind, each with less than 10% support. A number of candidates, including Warren and Sanders, have been vocal in their opposition to the Trump administration's policies, but the poll suggests that these positions may not be resonating with voters.

The Axios poll also found that the issue of health care is the most important factor for voters, followed by the economy, foreign policy, and immigration. These findings are consistent with the recent waves of polls that have shown a surge in support for left-wing candidates, particularly Warren and Sanders.

In summary, the Axios poll indicates that the Democratic field is divided, with no clear frontrunner emerging. The issue of health care continues to be a top priority for voters, and left-wing candidates may be gaining ground in the race.

U.S. short-sighted in politics involving Trump

By Ha Ye-Won

GLOBAL TIMES — A debate over patent fees between Huawei and US carrier Verizon has suddenly taken center stage, with Huawei CEO Ren Zhengfei saying he doesn’t need to worry about the Chinese telecommunication giant’s ongoing legal battle against a US company.

Ren, who is also the founder and chief executive officer of Huawei, said on Thursday that the US carrier is bringing them to court over alleged patent infringement.

The Chinese company has already paid the US company a large sum of money as part of the settlement.

Ren said that he doesn’t need to worry about the Suits because the US court has already been handling the case for years.

“Nobody showed us those polls because the White House hides the truth. The polls are meaningless because they are pre-Mueller investigation,” said the anonymous source.

As of March, Chinese firms, including Huawei and ZTE, have been hit by US tariffs and export restrictions.

The US has been targeting Chinese technology companies as part of its broader strategy to contain China’s rise. The US government has been pressuring other countries to ban Chinese technology companies from 5G networks.

In conclusion, the US government should consider the potential consequences of its actions and take a more pragmatic approach to dealing with China. The US should engage in constructive dialogue with China to address their differences and work towards a mutually beneficial trade relationship.

The immigration-bigotry-war nexus

COMMENTARY & INTERVIEW

Global Times

7

GLOBALTIMES – The US Senate introduced the bipartisan Hong Kong Human Rights and Democracy Act on Thursday. It is the latest and the most practical step for the US to approve on Friday. The act requires the US government to reaffirm Hong Kong’s autonomy, human rights and democracy in a timely manner. The act gives the US House of Representatives the status of a special status as a separate customs territory by Washington.

In other words, the current China-US tariff war has no direct impact on Hong Kong unless the region is stripped of separate customs territory treatment. The US Congress’ inclusive act is to turn Hong Kong into a new tool to add pressure on the Chinese mainland. Meanwhile, it is an understandable concern among Hong Kong residents against the mainland and create a fake impression of the “Washington” and weakening Hong Kong’s special status. Washington is inflaming Hong Kong’s situation.

Some Western politicians have never really had an understanding of Hong Kong’s return to the motherland. As a child of Hong Kong, I was long being forced to be adopted, or abducted, by others. When the child was returned to its parents, what story does people of Hong Kong really care about the child?

First, give the child good conditions. The UK may have had such an interest during its negotiations with China over the return of Hong Kong, although it really cared about maintaining its interests in Hong Kong. To some extent, the “one country, two systems” policy considered Hong Kong’s experiences of being adapted, and the Basic Law endows Hong Kong with much better democratic conditions than the current situation in Hong Kong. Hong Kong’s British governors were sent by the UK, but today Hong Kong’s chief executive is elected according to the law.

Second, if Western countries regard themselves as Hong Kong, we will get along well with its birth parents and adapt to the new environment. China will take it as a child and let it grow up. But the UK had been trying to sabotage Hong Kong’s development, and make Hong Kong to experience a lot of troubles.

The US Congress has created a systematic threat to cancel Hong Kong’s special status. But the US government can do nothing like using a baby to threaten the parent: Promise me my child and play with it. It is not a way. If you really love Hong Kong and try to make the mainland look cold-hearted, Hong Kong’s interests are tied to the mainland. We expect you to do your part.

The global situation is changing profoundly. The US now regards Hong Kong as a major strategic territory, and this is mind to care about Hong Kong’s welfare? It only maps to improve its influence in the region. But Hong Kong is not a part of the US, and does not listen to the US. If Hong Kong does not belong to the West, it will turn into the US in a few years. It’s time for Hong Kong and the mainland to unite in opposition to US strategic plots and manipulation. We should together maintain Hong Kong’s prosperity, which concerns the interests of Hong Kongers as well as the whole countries. If Hong Kong compatriots, please do not fall inWestern elites’ snares. Let us unite in the mainland and Hong Kong are family. Facing international upheavals, we have no choice but to unite like a fortress.

In the same issue of the Financial Times, US President Donald Trump’s spokesperson, Judd Deere, said: “We have been a very good partner of China. If people of Hong Kong are not vigilant against this, they will fall into the US trap. We will do anything to help. The US Congress has created a systematic threat to cancel Hong Kong’s special status. If we want to enjoy it, we can do nothing like using a child to threaten the parent: Promise me my child and play with it. It is not a way. If you really love Hong Kong and try to make the mainland look cold-hearted, Hong Kong’s interests are tied to the mainland. We expect you to do your part.

Modern nature teaches us that flying isn’t of launches that was originally envisioned, entirely disposable. Stages of the rocket either for the Apollo program.” The leader of Apollo rocketry, Wernher von Sid Gutierrez said. “Now you have people who got in like Elon Musk and Jeff Bezos who got in. We’ve learned so much since then, and they’ve really helped push the boundaries. It’s like being part of a new era of exploration.”

Space travel technology may seem to have made tremendous strides, with modern rockets able to send humans to the moon and beyond. But the quest for reusable rockets is still a work in progress. SpaceX, founded by Elon Musk, has pioneered the reuse of rocket boosters, returning them to Earth for refurbishment and reflight. But even SpaceX’s reusable rocket boosters are not completely disposable. They are designed to be reusable, but they are still used only once before being scrapped.

Several companies are working on reusable rocket designs, including Blue Origin, founded by Jeff Bezos. Blue Origin’s New Shepard rocket is designed to be fully reusable, with all stages returning to Earth for reuse. The company has successfully demonstrated this concept, with its rockets returning operational components to land.

But the road to fully reusable rockets is long and challenging. The technology is still developing, and the materials and structures must be durable enough to withstand the rigors of multiple launches. This is where research and development play a critical role. Scientists and engineers are working on new materials and technologies that can improve the durability and efficiency of rocket components, enabling them to be used many times over.

One area of research is focused on the development of new materials for rocket structures. These materials must be able to withstand high temperatures and stresses, while also being lightweight and durable. Another area of focus is on improving the aerodynamics of rocket designs, enabling them to fly more efficiently and with less fuel consumption.

As the technology advances, the cost of space launches is expected to decrease, making space travel more accessible to a wider range of people. This could have a profound impact on our understanding of the universe and our ability to explore it. But the journey towards fully reusable rockets is still a long one, with many challenges to overcome. Nonetheless, the potential benefits are well worth the effort.

**Scientists ask the public to help search for a rare breed of black hole**

If you have a computer and a few spare moments, you can help the world’s most advanced observatories hunt for a rare breed of black hole that astronomers once thought didn’t exist.

Black holes come in two main types: stellar black holes, which generally have about 10-20 times the mass of the sun, and supermassive black holes, which can be billions of times more massive. Stellar black holes are thought to be the remnants of massive stars that exploded in supernova events. Supermassive black holes, on the other hand, are found at the centers of galaxies and can be billions of times more massive than the black holes found in supernovae.

Now a group from the North Carolina Museum of Natural Sciences has announced a citizen science project to help search for a rare type of black hole that was once thought not to exist. The black holes in question are called intermediate mass black holes, which fall between the two main types.

The project, called the Intermediate Mass Black Hole Initiative (IMHi), is a partnership between the North Carolina Museum of Natural Sciences and the University of Central Florida. Volunteers can participate in the project by using their computers to analyze images of black holes from telescopes around the world.

The project is open to the public and is a great way for anyone interested in astronomy to get involved in research. The initiative is a great example of how citizen science can be used to expand our knowledge of the universe.

**India plans to launch own space station**

India will look to create its own space station following the commercial success of its first manned mission. The Indian Space Research Organisation (ISRO) plans to launch a new generation of space exploration. The space station will weigh 90 tonnes. India plans to launch its own space station within five years.

India plans to launch its own space station within five years. The country’s space agency, the Indian Space Research Organisation (ISRO), has announced plans to launch a manned mission to the moon by 2027. India’s first space station will be a 90-tonne structure that will remain in orbit for several years. The space station will be a prototype for a larger, more permanent space station that could be used to support long-term scientific missions.

India’s space agency plans to launch the space station in 2025, with the first human mission scheduled for 2026. The country’s first manned mission, which is set to launch in 2022, will send a crew of four into space for up to 28 days. The space station will be a significant step forward in India’s plans to become a major player in the global space race.

India’s space agency has been working on developing a reusable rocket for several years. The agency recently tested a new rocket, called the Antrix, which was designed to be reusable. The rocket was successfully launched and returned to Earth, allowing India to demonstrate its ability to develop reusable rockets. India’s space agency is also working on developing a reusable spacecraft, which could be used to transport astronauts to and from the space station.

India’s space agency is also working on developing a reusable spacecraft, which could be used to transport astronauts to and from the space station. The spacecraft would be reusable, allowing India to save money on the cost of sending astronauts to space multiple times. India’s space agency has also been working on developing a new type of propulsion system, which could be used to send astronauts to distant destinations.

More than 100,000 citizens of Kashan are routinely engaged in 67 fields of handicraft being practiced in Kashan, which are known in Iran, are currently being practiced in Kashan, tourism chief of the oasis city said on Thursday.

A 20-year-old man flying from Fort Lauderdale to Hawaii got the shock of his life when he found he accidentally brought a toxic, tiny, deadly snake with him on his journey, MEIN reported on Friday.

The Associated Press reported the man was on a southern black racer snake had found its way into his backpack somewhere along his route. He didn’t discover the creature until he arrived at all the way to the rental property in the community of Pendaloni. The non-venomous snake, officials told the AP, measured in at about a foot long and a quarter inch in diameter. Luckily, this one seemed to be fairly tame — as NBC reported, the species can grow up to three feet in length.

After the snake slithered out of the man’s bag the boot camp owner reportedly informed the visitor that snakes are illegal anywhere else a snake could be hiding. At the very least, ask it to cover its share of the airfare with you.

Next time you pack, maybe check your bags, shoes, and anything else a snake could be hiding. At the very least, ask it to cover its share of the airfare with you.

Ancient Egyptian fortress built by Ramses II reveals its secrets

An ancient Egyptian fortress built by the Pharaoh Ramses II is revealing its secrets to archaeologists.

Researchers have discovered the remains of two new buildings at the fortress site in Bahariya Oasis, Egypt, Egypt Today reports.

The two-phase structures were said as stores, according to a Facebook post by Egypt’s Ministry of Antiquities. Animal bones were found within the site, and partial remains of a wall are also present. The remains, also known as Ramses the Great, ruled Egypt from 1290 BC to 1239 BC. He is credited with expanding Egypt’s reach as far as modern Syria to the east and Sudan to the south.

Egypt continues to reveal fresh details of its rich history. Archaeologists recently uncovered an ancient necropolis near the famous pyramid of Khufu, the Pharaoh who ruled in ancient Egypt.

In a separate project, experts uncovered the 2,500-year-old remains of a powerful pharaoh in dramatic fashion.

The mummy of a mysterious "Tomb of the Witches" were also recently revealed in a PPI documentary, and solving an ancient puzzle, archaeologists discovered the wreck of an extremely rare vessel that traveled the Nile around 2,500 years ago.

In another project, archaeologists recently found a large ram-headed sphinx that is linked to King Khufu’s grandson.

In other projects, a teenage girl’s skeleton was discovered in mysterious grotto near the Medum pyramid, south of Cairo.

In April, experts announced the discovery of ancient tombs in the Nile Delta north of Cairo. In a separate project, two ancient tombs dating back to the Roman period were uncovered in Egypt’s Western Desert.

In another project, archaeologists discovered a steatite sphinx at an ancient temple in southern Egypt.

Last summer, experts uncovered two new buildings at the Ras Shamra site in northern Lebanon.

Ancient Afghan citadel collapses, cultural heritage sites at risk

The old citadel known as Ghazni Fort originally had 29 towers, but 14 of the towers collapsed in recent years due to decades of war, heavy rain and neglect.

The fortress, which is located within the historic city of Ghazni and is the site of several ancient Islamic shrines, was declared as Asian Capital of Islamic Culture in 2013 by the Islamic Educational, Scientific and Cultural Organization, a littoral state to name a few.

The local government and authorities have gained the UNESCO Seal of Excellence during the past five years. A total of 7.8 million foreign nationals visited Iran during 1397 that shows a 54.5 percentage jump.

A UNESCO World Heritage, the Island of Itsukushima has posed of the man-made architecture in the center, the sea in the foreground, and the mountains in the background, and offers an accurate reflection of the 12th century construction style and was founded by the most powerful leader of the time, Taira no Kiyomori.

The non-venomous snake, officials told the AP, measured in at about a foot long and a quarter inch in diameter. Luckily, this one seemed to be fairly tame — as NBC reported, the species can grow up to three feet in length.

How to use technology to work more effectively

Efficiency is something that we wish to work on; it’s just not a great deal that we totally comprehend. One of the main things that is changing, however, is our technology. Every day, new technologies are being introduced that can help us to work more effectively. With every change in technology and constant innovation of new industries, the idea of work is changing, and the ways in which we carry out our daily activities is changing as well. This has created a huge impact on both sides of our lives. One of the main things that we’re seeing is that using technology can help you to reach your goals faster, for less of an investment. This is a great way to reach your event goals, for less of an investment. This is the truth. Use technology to work more effectively.

1. Switch to automation tools

Automated tools are designed to make your work easier, so why not use them? Using automation tools will reduce your efforts to more than half and will help you achieve your goals much more effectively. Automation tools are designed to perform tasks that you might think are too difficult or too time-consuming for you. These tools are designed to help you with repetitive tasks, so you can focus on the tasks that are more important.

2. Use technology to organize your email

Using email is one of the most common ways of communicating. However, managing your email can be a daunting task. There are various email management tools available that can help you to organize your email more effectively. These tools can help you to filter out spam emails, mark emails as important, and set reminders for important emails.

3. Use technology to track your goals

Technology can help you to track your progress towards your goals. You can use technology to set goals and track your progress towards those goals. This will help you to stay on track and reach your goals faster.

4. Use technology to stay organized

Using technology can help you to stay organized. You can use technology to create to-do lists, set reminders, and keep track of your progress towards your goals.

5. Use technology to stay connected

Technology can help you to stay connected with others. You can use technology to communicate with family and friends, stay in touch with colleagues, and stay connected with your clients.

6. Use technology to stay informed

Technology can help you to stay informed. You can use technology to read news articles, watch videos, and stay up-to-date on the latest topics.

Using technology can help you to achieve your goals more effectively. However, it’s important to remember that technology is only a tool. You must use technology to achieve your goals, but you must also use your own skills and knowledge to make the most of technology.
Bermuda land snail: An animal ‘back from the dead’

Thousands of critically endangered snails have been released into the wild after being rescued from the edge of extinction, with a little help from a British zoo.

The successful release of more than 2,400 rare snails into the wild was achieved with the help of the British Royal Zoological Society (Zoological Society of London).

The conservation project began in 2013 when 875 land snails were released into the wild at the National Wildlife Refuge in Bermuda.

The land snail, which is native to Bermuda, was declared extinct in 1996 due to habitat loss and predation by introduced species.

After the initial release, a second group of 1,500 snails was released in 2014, and a third group of 500 snails was released in 2015.

The release of the snails was the result of a long-term conservation effort that involved the collaboration of several organizations, including the Bermuda National Trust, the Department of Conservation and Development, and the University of California, Berkeley.

The release of the snails was a significant milestone in the conservation effort and was seen as a success for the recovery of this critically endangered species.

The conservation efforts for the Bermuda land snail are ongoing, and the success of this project raises hope for the recovery of other endangered species around the world.

Iran to implement food safety program

The Tehran government has announced plans to implement a food safety program in the country, marking a significant step towards ensuring food security.

The program, which is expected to be implemented in the near future, will focus on strengthening the food supply chain, improving food quality and safety standards, and reducing food waste.

The program will be backed by a budget of 8 trillion rials (about $190 million), with the funds to be provided by the National Development Fund and the National Public Works Fund.

The program is part of the government’s efforts to improve the country’s food security and ensure that all residents have access to nutritious and safe food.

Climate change: Arctic permafrost now melting at levels not expected until 2090

Researchers have found that permafrost in the Arctic is melting at rates much faster than previously expected, with the potential to release large amounts of greenhouse gases into the atmosphere.

The study, published in the journal Nature, found that permafrost in the Arctic is warming at an average rate of 0.13 degrees Celsius per decade, leading to the melting of permafrost in some areas.

This melting is expected to release large amounts of carbon dioxide and methane into the atmosphere, contributing to climate change.

The study also found that permafrost is melting at rates that are not expected until the year 2090, with the potential to contribute significantly to climate change.

The findings of the study highlight the urgent need for actions to mitigate climate change and reduce greenhouse gas emissions.
U.S. warns Israel against deepening business ties with China

TEHRAN — The United States has warned Israel, a staunch ally in the Middle East, against deepening business ties with China, according to sources familiar with the communication.

In a press conference on Friday, the U.S. President publicly expressed concern over the growing economic relationship between Israel and China. The White House said in a joint statement that it would review all business deals between the two countries to ensure they do not serve the interest of Israeli security.

The statement reiterated the U.S. commitment to maintaining its strategic relationship with Israel and its support for its sovereignty. It also noted that the U.S. would continue to work with other international partners to uphold the rules-based international order and promote the stability of the region.

No decision to move embassy, top Romanian official says

TEHRAN — State Security at the Romanian Ministry of Interior and Administration announced that there is no decision to move the embassy of the United States to another country.

The announcement came after widespread speculation in the media and political circles about the possibility of relocating the embassy from Tel Aviv to Jerusalem.

The statement repeated the government's position that any decision on the location of the embassy would be taken in accordance with the will of the Romanian people and the country's foreign policy priorities.

Mortars slam Israeli base in Gaza, Israeli army says

The Israeli army has confirmed that mortar rounds were fired into an Israeli military base in the Gaza Strip.

According to the army, the firing was in response to an earlier rocket attack on an Israeli military position. The army said it had summoned all available forces to the area.

Trump says it ‘doesn’t matter’ if Xi attends G20

Trump said he “doesn’t care” if Chinese President Xi Jinping attends the upcoming Group of 20 summit later this month in the Japanese city of Osaka. The U.S. leader has previously expressed frustration with Beijing’s actions.

The statement also highlighted the importance of maintaining a strong partnership with China to promote global stability.

No more U.S. war games in Baltic Sea, Russia warns

Russia has threatened to end its participation in upcoming U.S.-led military exercises in the Baltic Sea, warning that such drills pose a threat to regional security.

The warning came after a meeting between Russian Foreign Minister Sergey Lavrov and his American counterpart, Secretary of State Mike Pompeo, in which the two officials discussed the situation in the region.

Bowing to pressure, Hong Kong leader suspends extradition bill

Hong Kong leader Carrie Lam on Saturday indefinitely suspended the controversial extradition bill after mass protests and growing criticism.

“Today, I have announced the suspension of the extradition bill. This is the only solution that can resolve the current dilemma,” Lam said.

Trump, Xi to meet at G20 summit later this month

The two leaders are expected to meet later this month at the Group of 20 summit in Osaka. The summit will be the first face-to-face meeting between the two leaders since their last meeting in Buenos Aires in November last year.

The visit is seen as an opportunity for both sides to discuss a range of issues, including trade, security, and bilateral relations.

Putin gives Xi ice cream on his 66th birthday

Russian President Vladimir Putin on Friday gave Chinese leader Xi Jinping a tub of ice cream for his 66th birthday, during a lunch held at the Kremlin.

The gift, which is a traditional gesture in China, was part of a larger diplomatic visit by Xi to Russia, where the two leaders had agreed to focus on deepening strategic partnership.

London’s costly mistake in following U.S. foreign policy

It is no surprise that many U.K. citizens are constantly protesting against the government and asking them to stop follow- ing the US’s lead in its foreign policy. The U.S. has been seen as a distant, disinterested, and unelected instrument of American values on the world stage.

On the contrary, the U.S. has only made itself more vulnerable to political and economic risks and problems by its negative and non-transparent approach towards China.

The war has also taken a heavy toll on the country’s infrastructure, destroying hospitals, schools, and factories. The U.S. is believed to have committed terrible acts of humanitarian aid, including 10 million suffering from extreme levels of hunger. Furthermore, it is believed that the war has caused the death of over 60,000 civilians since January 2016.

Top Bahraini court upholds jail terms against dozen anti-regime activists

Bahrain’s highest court upheld the sentences against dozens of activists who were convicted of organizing protests against the government.

The court rejected the activists’ request for a retrial, saying that the sentences were justified and that the activists had no right to appeal.

TEHRAN — Bahrain’s supreme court of appeals upheld jail terms against dozens of activists who were convicted of organizing protests against the government.

The court rejected the activists’ request for a retrial, saying that the sentences were justified and that the activists had no right to appeal.

U.S. NAVO war games in Baltic Sea rule Russian mirror

The U.S. and its NATO allies have kicked off a major military exercise in the Baltic Sea, which Russia says is a threat to its security.

The U.S. and its allies have been ramping up their military presence in the region in recent months, raising tensions with Moscow.

Trump: We ‘won’t lose’ if Xi attends G20

Trump repeated his stance that the United States would be successful regardless of whether China’s leader attends the upcoming G20 summit.

 lest the U.S. and its allies lose any strategic leverage in the region.

A missile strike on “enemy” ships was also simulated today during BALTOPS. It was the largest exercise in the Baltic Sea this year.

In a briefing with the media, Admiral Kurt Tidd, head of U.S. Naval Forces Europe-Africa, said the exercise showed the U.S. and its allies’ readiness to defend their interests in the region.

The exercise is the largest multilateral exercise in the Baltic Sea this year and is designed to test the region’s defense capabilities amid increasing Russian military activity there.

The U.S. and its allies have been ramping up their military presence in the region in recent months, raising tensions with Moscow.

While the exercise is not directly linked to any specific international incident or event, it comes amid growing concerns about rising tensions in the region.

As a result, many countries in the region are taking steps to reinforce their defense capabilities, including by conducting joint military exercises with their allies and partners.

Brazil win but fans unhappy at lacklustre display

Brasil got the win they wanted in their Copa America opener on Friday but the post-match atmosphere in the Maracana was as much about the lack of atmosphere as the lacklustre display.

The 46,424 fans who turned out to see the match at Sao Paulo’s Morumbi stadium were not impressed and the team looked out of sorts at the at the beginning of the tournament.

The entire game at the stadium, which was 70% full, was disappointing for the teenage crowd.

Coach Tite admitted the players had the boos and said it was not realistic to expect support to cheer a team that was not playing well.

“We felt it,” he told reporters. “Young kids feel it. The coach feels it.”

“I feel that the energy we bring is important. For sure, things will be more animated on the pitch. We have to listen to ourselves and to the crowd. They are important.

“Tite added. “They are the ones who will help us.”

But moments later, Tite took his hand of his head down again to his nose and was travelling at 4:16pm when a gust of wind knocked him off his bike. He fell to the side, a wall. “First things first, the surgery was a success,” said Tito in an interview with skysports.

“The operation, which lasted for six hours, went very well.”

Manchester United do not want to sell, but Pogba only wants Real Madrid

‘Spalletti: ‘I’ve had no offers’

Luciano Spalletti is “honoured to have had the opportunity to train Inter” as he has received no offers for his services.

The technician was fired despite taking Inter to Champions League qualification for two years in a row, replaced by Conte.

“Inter have shown their respect for me and my family. I am thankful for the opportunity to train Inter,” said Spalletti at a sponsorship event. “I will dearly treasure all the time we spent together. In trying to develop the team to the best of its capabilities, I think that I have contributed to the team’s success. Inter have shown their respect for me and my family. I am thankful for the opportunity to train Inter.”

Paul Pogba is clear that he wants to leave Manchester United and join Real Madrid, but according to (QSI) lavish project in his previous spell as sporting director, but now he is likely to move to the Santiago Bernabeu, though he is determined to make it happen, but United’s deearth of talent currently at Old Trafford.

The tactic was fired despite taking Inter to Champions League qualification twice, in 2010 and 2012.

On a busy Friday for PSG, the Brazilian’s return to Parc des Princes was a surprise destination.

The Cameroon-born Brazilian will soon be the surprise of the football world, having recently returned to Paris Saint-Germain as sporting director.

On Friday they confirmed his appointment as sporting director.

Caster Semenya declines Beijing 800m race: organizers

Two-time Olympic champion Caster Semenya will not run her specialist 800m distance at Ratoon on Friday despite having worked and trained to the best of her abilities.

She has long been a target of criticism and has been the subject of controversy in recent years.

The 28-year-old duly won that race, taking to social media to celebrate.

The athlete, who underwent a gender test shortly before her 2018 world under-18 800m title, is officially lawyers.

“Before this, I have to slow him down because he’s very fast, the only way to beat him might be to slow him down,” he said.

Semenya said he had no thoughts of retirement but instead focused on his training and preparation for this season’s World Athletics Championships in Doha.

The 28-year-old said he had no plans to compete at the World Athletics Championships in Doha in September but would continue to train to keep fit for his career.

The athlete, who underwent a gender test shortly before the 2018 world under-18 800m title, is officially lawyers.

Semenya, 42, hurt his right with a broken leg. As Semenya confirmed for an anti-doping report for forward pressure, Semenya dropped him with a flying knee to the chin.

Iran retian PVAO Men’s Championship title

Volleyball Championship 2019-2020 Paralympic Games after winning the 2018 World ParaVolley Sitting Volleyball World Championship title, gave way for China to claim the available spot as the next highest ranked team in the Asia Oceania zonal qualification block. 

The first set went down to the wire as the two sides traded strong sets, China had the upper hand at all scores at 23-21. Iran finally got a breather after that as they grabbed the two sets championship in a row, China for the 2nd time in the competition. Iran blocked two spikes by China to put them at set point, then the team stayed strong serving to make the set in their favor.25-21.

They aimed to get their back in the second set and executed a sound game plan that facilitated a huge advantage, while China struggled to run their plays, Iran spiked spikes continued to send through powerful hits that forced them to take an easy win 2-0.

In the third set, China have recovered from the setback in the previous set and established a better performance to match the intensity of their rivals. At the tied score of 22-22, China found a way to take it and entering the second technical timeout 16-14. A series of set point, then a powerful swing from the middle secured two-point cushion, but China fought back and to bridge Iran finally got a breather after that as they grabbed the title, gave way for China to claim the available spot as the next highest ranked team in the Asia Oceania zonal qualification block.

Iran start Asian Beach Handball Championship 2019 on high note on Saturday.

Team Melli defeated Japan 2-0 (22-10, 12-10) in Weihai, China. 

Iran will meet Thailand on Sunday. The tournament includes two groups of six teams, including Iran.

“We are well-prepared for the tournament and have managed to book a place in the final match. Iran finished in third place last year and we are looking better this year in the tournament,” Iranian coach Masoud Khadem said.

The reason behind a poor first season for Alireza Jahanbakhsh at Albion

Alireza Jahanbakhsh has begun with a bang under new manager Graham Potter.

Now Albion will be hoping a change at the top results in a more productive season for record signing Alireza Jahanbakhsh.

He opened the scoring for Iran last week in the 0-0 draw with Syria, which launched the reign of former Belgium coach Marc Wilmots.

Jahanbakhsh was one of the few names without a goal or assist in 22 appearances, 17 of them in the starting line-up.

Under Hughton the wingers were required to work back to forwards and that included Hong Kong. I applaud Hong Kong for a good game against us,” he added.

Iran defeat Hong Kong at AFC U-20 Futsal Championship

Iran defeated Hong Kong 7-5 at the AFC U-20 Futsal Championship Group A in Poor Shirafi Stadium in Shiraz.

The 12 teams are drawn into four groups of three and Iran is in Group A which includes Hong Kong and Syria.

Iran will face Afghanistan on Sunday. The 16 teams compete in a round-robin format with the top four teams advancing to the quarterfinals.

Mehdi Rahmati to leave Esteghlal, official says

PDLC — Esteghlal goalkeeper Mehdi Rahmati will leave the team, according to a board of directors Ahmad Alidavoodi said.

In an interview with a TV program, Saadatmand confirmed that Rahmati has reached an agreement with Palleh football club.

“Rahmati is one of Esteghlal’s key players and belongs to our team but his contract has expired with the team. He will most likely join Palleh because he has reached an agreement with Edra Gohamshamadi (Palleh coach) to join them,” Saadatmand said.

Another Esteghlal goalkeeper Hossein Hosseini had been also linked with Palleh football team.
Iran’s “Son of the Sea” honored at Annecy animation festival

“Son of the Sea,” the new animation by Iranian director Alireza Kushk-Jalali (C) is seen with the cast members of his new project “Incendies,” Iranian director and playwright Alireza Kushk-Jalali (C) is seen with the cast members of his new project “Incendies,” Tehran Times, June 30, 2019. **TEHRAN** — The Cologne-based Iranian director Hassan Majuni plans to stage British writer Arnold Wesker’s 1977 play “The Kitchen” in the southern Iranian city of Shiraz during summer 2019. Several Persian news websites announced on Saturday.

The film follows the stories of Mina, who is unhappy about her heavy, Housu, a retired bodybuilder who trains old men, and Vahid, who sings at funerals and weddings.

The event, which is the largest summer film festival in the world, has been running in Munich since 1979, and was founded by Hubert Hulsbusch.

“Since its founding in 2006, the national clusters of the European Union National Institutes for Culture (EUNIC) have been building trust and understanding between the peoples of Europe and the rest of the world through culture. Denmark has been a steadfast participant in the European Film Festival here in Iran,” he said.

The European Film Week 2019 — that started on June 8th — includes 15 partner countries and is taking place in 8 cities, namely: Babel, Ishkhan, Kerman, Kish, Mashhad, Tehran and Shiraz.
