Israel in possession of close to 100 nuclear warheads: SIPRI

TEHRAN—A new report reveals that the Israeli regime is in possession of approximately 100 nuclear warheads, which it refuses to confirm or deny as part of its policy of nuclear ambiguity.

The Stockholm International Peace Research Institute (SIPRI) said Monday Tel Aviv has 30-50 bomb gravity bombs that can be delivered by fighter jets – some of which are believed to be equipped for nuclear weapon delivery. Israel also possesses close to 50 warheads that can be delivered by land-based ballistic missiles such as Jericho II, said to have a range of 5,000 km, the global security think tank said.

The institute said Israel has modernized its fleet of German-built Dolphin-class submarines to carry nuclear-armed sea-launched cruise missiles, giving it a sea-based second-strike capability.

In May, the Institute for Science and International Security (ISIS) said Israel has more than 1,500 defects.

TEHRAN—President Donald Trump’s reelection campaign may be hurt by leaks of its internal numbers leaked showing the commander in chief trailing former Vice President Joe Biden in critical states. But they’re not the only ones seeing their numbers fall for the president.

A Fox News poll conducted Thursday found Trump struggling to get re-elected.

In August 2018, Israeli Prime Minister Benjamin Netanyahu announced a “unanimous warning!” from the regime’s secretive atomic weapons facility.

If Iran does something it will ‘bravely’ announce it, military chief says

TEHRAN—Iran will “bravely” announce any of its nuclear capabilities leak, if it does something, Armed Forces Chief of Staff Mohammad Bagheri announced on Monday during a press conference by the United States that Iran is behind the attacks.

On Thursday, two tankers—one carrying the other transporting chemical—were attacked near the strategically important Strait of Hormuz. Roughly 30% percent of the world’s sea-borne crude oil passes through the chokepoint.

Talks are underway on Sunday, U.S. Secretary of State Mike Pompeo claimed it is “clear” that Iran had carried out the attacks with a “clear intent to deep water transport” chemicals.

The S.0.05% has made such a claim on Tuesday.

Poll shows Trump trailing democrats in hypothetical matchups

In the JCPOA, Iran has vehemently rejected the term, calling it “ridiculous” and “dangerous.”

“If the Islamic Republic of Iran has any will to block the export of oil from the Persian Gulf region, it will definitely realize and declare that openly,” Major General Bagheri told reporters on Imam Hussein University premises on Monday.

The top military commander went on to tell reporters that a part of the JCPOA’s main power lies in the on-the-ground presence of the Islamic Revolutionary Guard Corps for the attacks. If not, the country would lose the JCPOA’s major power, he added.

The top general said powerful Iran will “not act to secretly or deceitfully.”

A representative of the Islamic Republic of Iran’s armed forces said after President Donald Trump withdraws the U.S. from the multi-lateral nuclear deal, Iran should take the initiative to lift sanctions.

However, Iran has said if the remaining parties to the JCPOA, including the European Union, decide to take steps to offset sanctions it will stop its move.

Under the JCPOA, Iran’s stockpiles of enriched uranium should not exceed 300 kg.

Iran’s Stockpiles of Enriched Uranium to Surpass 300 kg by July 7

The European Union foreign ministers have remained unconvinced by U.S. allegations that Iran was behind last week’s attack on two tankers.

There was strong support among EU countries for an independent UN investigation into the incident.

The incident, which occurred in the Gulf of Oman, led the United Kingdom, France and Germany, who along with the United States and China along with the European Union, to convene an emergency meeting of the Security Council.

Iran elected as vice-president of PIANC’s marine engineering committee

THE RIVER – The chairman of the board of Iran Marine and Coastal and Marine Engineering Association (IMORAN), Babak Baradaran has been selected as the new vice-president of the marine engineering committee of the World Association for Waterborne Transport Infrastructure (known as PIANC). The World Association for Waterborne Transport Infrastructure is an international professional organization founded in 1885.

PIANC’s mission is to provide expert guidance and technical advice on technical, economic and environment issues pertaining to waterborne transport infrastructure, including the fields of navigable bodies of water (waterways), canals and rivers, as well as ports and marinas.

The governing body in the organization is the Annual General Assembly, which is composed of delegations from the member countries.

ISLAMIC REPUBLIC OF IRAN BROADCASTING

Tender Holder:

ISLAMIC REPUBLIC OF IRAN BROADCASTING (IRIB)

Subject of Two-Stage Tender:

Purchase of Equipment for Infrastructure, Storage, Communication Processing of IRIB Data according to the tender documents.

Deadline of Receiving Documents:

As of publishing second announcement of advertisement latest by the business hour dated on Monday June 24, 2019.

Place of Receiving Documents:

Type and Amount of Guarantee for Participating in Tender:

The type of USD 43,196 which should be in the form of extendable bank guarantee.

Time and Place of Delivering Priced Bid:

The sealed A, B & C packages/envelopes should be submitted within one main envelope marked with tender number no later than 15 p.m. on Saturday July 27, 2019 and submitted to the Secretariat of Commission of Tenders.

Time and Place of Opening Envelopes:

The date of opening envelopes A&B is at 8:30 a.m. on Monday July 29, 2019 in the office of Vice President of IRIB Planning and Financial Resources and opening of envelope C will be after technical evaluation.

It should be noted that bidders should hold license from the authorized bodies.

For more information, please contact the following phone numbers: 0909-21-2266313.

It is obvious that cost of publishing two advertisements shall be borne by the winner of tender.
Turkey looks to raise share of renewables to two-thirds by 2023

Turkey is looking to raise the share of domestic, renewable sources up to two-thirds of the country’s electricity production by 2023, the country’s energy minister, Fatih Dönmez said at a G20 meeting in Japan on Sunday.

As reported by daily Sabah, ‘Last month Turkey held an auction for wind farms that would generate 1 gigawatt (GW)’ Dönmez said at the G20 Ministerial Meeting on Energy Transitions and Global Environment for Sustainable Growth in the region.

‘For a country which had a lot of benefit from energy efficiency, as well as renewable energy, fossil fuels and nuclear power technologies,’ he noted.

He said in 2021, Turkey became the member of the po-

ternal “GW Club” and plans to exceed 2 GW by 2023.

“We recently announced National Energy Efficiency Action Plan sets out actions to implement a reduction of 14 percent of primary energy consumption by 2023, via a package of measures worth billions of TL,” Dönmez said.

He stressed that Turkey also aims to benefit from vast coal reserves while paying utmost importance to the im-

plementation of clean coal technologies.

“We attach great importance to the application of clean coal technologies, which will contribute to the research and development to be made in this area,” the minister said.

Primary energy supply

Turkish President Recep Tayyip Erdoğan has said that Turkey has strong will to include nuclear energy to primary energy supply starting from 2023 by commissioning the first unit of Akkuyu Nuclear Power Plant.

Russia’s Rosatom is constructing Turkey’s first nuclear plant in the southern province of Mersin. The plant, comprising four units, each with a capacity of 1,200 megawatts (MW), will meet about 4.5% of Turkey’s total electricity needs once fully operational.

“I would like to emphasize one more time that baseload power sources such as nuclear and fossil fuels are necessary to ensure energy stability,” Dönmez said.

The minister said that “Turkey values flexibility in natural gas as well. By building world-class LNG termi-

nals including FSRUs, transmission and gas storage infa-

structure investments, Turkey can provide flexibility to the region as well.”

He said that just like energy resources, energy innova-

tion also needs diversification. “We have started a start-

up initiative to integrate artificial intelligence (AI), IoT, cyber-security and energy efficiency concepts into the technology,” the minister said.

Regional efforts needed to ensure peace in Afghanistan

TEHRAN (FNA) — Even though the US war was launched over 17 years ago, the situation in Afghanistan remains unstable and the international community is increasingly concerned about deadly attacks by the extremist and militant groups.

Reports on the ongoing violence, killings, rocket and attack bombs explosions in Afghanistan have been coming almost daily.

The year 2018 witnessed an 11-percent increase in civilian deaths and injuries across the globe, with 12,400 civilians killed and 22,300 injured, and 1,056 civilians were killed in Afghanistan. This is the highest number of civilian casualties since the US-led invasion of Afghanistan. According to the US Department of Defense, a total of 2,407 American soldiers were killed in Afghanistan since the US invasion of the country in 2001.

So ensuring sustainable security and peace in Afghanistan is a great challenge for the region. The need for the Afghan government to return to the negotiating table and find a solution to the political crisis and the situation in neighboring Afghanistan by stopping the violence, and by providing solutions for the cross-border movement of the terrorists and extremists in the name of jihad, Wahhabism and Salafism.

But Afghanistan is still a country with a history of military intervention, which needs to shed its ambivalence and evolve a concerted strategy to curb terrorism and extremism in and around Afghanistan by stopping the violence, and by providing solutions for the cross-border movement of the terrorists and extremists in the name of jihad, Wahhabism and Salafism.

In its initial year of establishment, the SCO members cooperated closely to narrow the gap between the SCO and Afghanistan. The SCO was established to prevent terrorism, extremism and drug-taking in the region.

Recognizing the near-term and long-term importance of stability in Afghanistan and the need for Afghanistan to become a member of the SCO, the SCO-Afghanistan Contact Group (SACG) was established to build on the foundation of the establishment of SACG aimed at fighting terrorism, extremism and arms smuggling in Afghanistan.

The meeting is a distinctive step towards the establishment of SACG aimed at fighting terrorism, extremism and arms smuggling in Afghanistan. The meeting was attended by representatives of the SCO member states, including Afghanistan.

The 10th SCO Regional Anti-Terrorist (RAT) meeting in April 2018 was a distinctive step towards the establishment of SACG aimed at fighting terrorism, extremism and arms smuggling in Afghanistan. The meeting was attended by representatives of the SCO member states, including Afghanistan.

In his address to the RATS, the Secretary General of the SACG, Dr. Amrullah Saleh, emphasized the importance of the establishment of SACG aimed at fighting terrorism, extremism and arms smuggling in Afghanistan. The meeting was attended by representatives of the SCO member states, including Afghanistan.

As such, SCO and by the way, a distinctive role to play by the SCO and RATS has a distinctive role to play by the SCO and RATS.

Pakistan has contributed significantly to the establishment of SACG aimed at fighting terrorism, extremism and arms smuggling in Afghanistan. The meeting was attended by representatives of the SCO member states, including Afghanistan.

Each year, an enormous amount of US dollar-denominated international financial inflows towards China and emerging markets, which is a great challenge facing the regional community which needs to be resolved.

The US dollar-denominated international financial inflows towards China and emerging markets, which is a great challenge facing the regional community which needs to be resolved.
**ANALYSIS & INTERVIEW**

**Antwar** — British goon cops acting at the request of the United States government, dragged out WikiLeaks founder Julian Assange and prepared to ship him across the globe. The US has turned a corner on this last event last month, of the main stream media reacted with hysterical abuse of the new Order and its anti-Iran partners. But the Bush administration’s decision to portray the Gulf of Oman incident as a “clash of civilizations.” The US pursuit absolute security and advantage, which may lead to Washington’s ultimate aim is to establish a “backward” Islamic world, and to the new Israel-Nation-State law! Assange has taken one of the most important steps toward self-governing. The “common factor of both colonialism and neo-colonial-ism” in the White House. “Because traditional journalistic activity does not extend to hacking into a Pentagon computer, the government did not give much thought to criminalizing activities that are crucial to American investigative journalists who write about national security matters.”

**A Palestinian response to Jared Kushner’s racist remarks**

MOONDIVERS — In classical racist discourse and lies, blacks/blacks are inferior to whites/white Americans, who cannot run their own affairs, they belong to backwardness and落后ism. This is a common sentiment of these nations amount the end to nothing, and when the US is being the tool of Washington and Western intervention. The racist ideology of colonialism justifies the inhuman behavior of the so-called human being of the Palestinian people, in general, in Israel settler-colonialism, in particular.

Jared Kushner, Donald Trump’s Middle East adviser and ally, has recently mixed doubts about the ability of the Palestinian people themselves. That is what they have to have. The hope is that they, over time, will become capable of running their government. Although this ideology is rooted in the system of justice, freedom of expression, expression of religion, expression of the will of the people, it has become an invisible. Of course, Israel, for him, does not believe that the Palestinian people... The US government, in particular, has repeatedly said that they are exclusive to a particular religious group, which is not the case. Israeli government has to do with the Israeli people... I want the opportunity to live, as a Palestinian, as a free human being. If I have the right to govern, then I will have this opportunity to run the government.

Lendman says False flags are a US tradition in the Middle East. “We have seen this in the Middle East many times, not the way they ought to be. The project of a left must be to end the occupi-ty of the Palestinian people, in the same way the US tries to end the occupi-ty of the American people.”

The Tehran Times new pocket-sized glossary is now available on the market. The reader-friendly is a rich source of the most common journalistic terminology collected by the daily's retired staff.

It can benefit a wide range of tastes from students to professional journalists. Persian equivalents have been provided for all entries, including idioms and expressions. The glossary also includes example sentences for entries the authors thought it would be a bit difficult to learn.

### Direct from distant planet: Spectral clues to puzzling paradox

**Docker workers’ dietary changes reflect the decline of the Roman Empire**

When times were good, the dockworkers of Portus, the maritime port of Imperial Rome, enjoyed a surprising diet — one that included meat. But new analysis of ancient animal and human bone samples suggests that by the time of the eruption of Mount Vesuvius in 79 A.D., dockworkers may have been eating less meat, a clear reflection of the decline of the Roman Empire.

During the time period, the people of Rome, enjoyed a surprisingly diversified diet. But new analysis of ancient animal and human bone samples suggests that by the time of the eruption of Mount Vesuvius in 79 A.D., dockworkers may have been eating less meat, a clear reflection of the decline of the Roman Empire.

**NASA’s spacecraft is orbiting closer to an asteroid than ever before**

In the dark and lonely place that is space, NASA’s OSIRIS-REx spacecraft is reaching a new level of precision as it studies an asteroid.

After a maneuver, the spacecraft in NASA’s asteroid sampling mission is now closer to the asteroid Bennu than it has ever been before. Bennu, a rocky C-type asteroid, is about 500 meters in diameter and orbits the Sun in the inner asteroid belt.

Its orbit is highly elliptical, and it makes a close encounter with Earth every 4.5 years. In 2023, Bennu will pass within 150,000 kilometers of Earth, which is closer than the moon. The spacecraft will then perform another maneuver to flyby the asteroid in 2025, coming within 100,000 kilometers of the asteroid’s surface.

This is the first time that a spacecraft has orbited so close to an asteroid, and it marks a significant milestone for the OSIRIS-REx mission. The spacecraft will use its cameras and other instruments to gather detailed images and data about the asteroid’s surface, which will help scientists understand the asteroid’s composition and history.

**Heartwarming discovery shows dolphins are even more like us than we thought**

Many comparisons have been made between humans and dolphins, such as the role of the ocean in their lives. Scientists have found another point of similarity between us and our cetacean cousins: Like dolphins, humans make friends based on mutual interests.

In a new study published in the journal *Science*, researchers analyzed data from the dolphin community of Shark Bay, Australia, the dolphins have been observed using sponges as a tool for foraging, which allows them to access food in deeper waters.

The study found that dolphins tend to spend more time with other dolphins who share non-sponging - and this relationship could be attributed to other factors, such as the importance of adult and juvenile non-spongers.

**Canada backs startup to boost data on space debris**

The Canadian government is backing a proposed startup to collect and analyze data on space debris, which could help to provide commercially available data about the Earth and its orbit amid growing concerns about space debris.

Support from the Canadian Commercial Corporation (CCC) will help Canadian startup Northern Earth and Space to negotiate initial service agreements with the United States, Britain and other countries, NorthStar CEOないので Rain said.

Boe cited strong international interest in the project given increasing levels of activity in space, and mounting concerns about the dangers posed to satellites by space debris.

**This is what it looks like when galaxies are about to die**

The beginning of the end for our galaxy is just a few billion years away. That’s when the glittering disk of the Milky Way is projected to collide with the nearby Andromeda galaxy.

The collision will slam the black holes at the centers of the galaxies, producing a luminous whorl of fast-moving, ultra hot gas and dust that blasts brilliant blue halo in the sky, as bright outshines the stars. The system will then start to break up, as the two galaxies are ripped apart by their mutual gravity. The strongest part of the blast will be focused on the center of each galaxy, and the dust and gas in the outer regions of the galaxies will be blown away, leaving behind a fainter, redder remnant. The aftermath will be a period of intense star formation and the creation of new stars.
**Rouhani calls for development of tourism sector**

**TEHRAN** — President Hassan Rouhani has called for the development of tourism sector as a need to expand economy, create job opportunities and boost friendship between cultures.

Addressing a meeting with cabinet members on Sunday, Rouhani underscored promoting Iran’s tourism in light of its landmark tourism attractions, historical monuments and natural sites, IRNA reported.

The meeting discussed official procedures and removed legal obstacles.

Due to various natural and social factors, Iran offers diverse tourism events for the nature loving travelers. Sightseers may live with a nomad or rural family and enjoy an independent stays and assist with a similar search boom, with a 31% increase in search for tourism, construction, retail, manufacturing and transport.

It is our goal primarily to employ domestic workforce but the local people are not able to hire or at least hire tourists that may provide a benefit to the economy.

Tourists from the U.S., Canada, Japan and Australia can now travel to Brazil visa-free though it may be tempting to start off your vacation by sleeping in, you’re actually much better off booking an early-morning flight. In fact, Trevz and Leitner suggests that you should exclusively fly in the early morning. The reason? You’ll have a much better chance of getting to your destination on time (or at least close to it).

Fewer delays

Early-morning flights are less likely to be delayed than those that happen in the afternoon or evening. Delays reportedly start around 8am each day and then get worse until they’ve reached a peak around 6pm. The reason is air traffic. In the early-morning hours, air traffic is less likely to be backed up since all of the flight from the night before will have already landed.

Less turbulence

Even better, you’re also much less likely to experience turbulence in the air when you fly in the morning. A storm most thunderstorms and the unstable air that come with them happen in the afternoon. Early-morning flights are also often cheaper than their counterparts because people would much rather sleep than head to the airport at the crack of dawn. That’s good news for you if you do find storms will also be the lighter at security and the gate for that early-morning flight, making it easier for you to use the money you saved on your ticket to buy an overpriced coffee at that airport Starbucks.

**Why early morning flights are the best flights**

**Tourism**

**TEHRAN** — UNESCO-listed Tchogha Zanbil is widely known as the world’s best surviving example of Elamite architecture. The ruined ziggurat is located approximately 6 kilometers southwest of Shush and 80 km north of Ahvaz. Reaching a total height of some 60 meters, the monumental monument was constructed by the ancient Elamites, which looks like a split box of tin parts. Lonely Planet says that even if you’re not a fan of ancient ruins, the great bulk and splendid semi-desert isolation of the site will tempt. Try to catch it in the soft, golden light of late afternoon rather than the harsh midday sun.

The ancient country welcomed some 7.8 million foreign tourists last year, according to the country’s tourism and ecotourism arenas, saying domestic tourism compared with the same period last year.

According to the Central Bank of Iran, tourism industry contributed 8.1 billion rials to the country’s GDP in the past year (mid- March 2018 to March 2019). In addition, handicrafts exports made up 289 million dollars in the same year.

Adapting to new technology still a struggle

Today's mantra for innovation is to celebrate failure — a single person having a Eureka! moment, that's not the whole story. Helping organizations understand how to cultivate innovation and transform a risk-averse IT culture is not usually straightforward, and even worse, it can be expensive.

Unlocking innovation: Tips for transforming a risk-averse IT culture

The government goal realized by 62.8% official

Conferences, exhibitions, and other events held this May in Casablanca and Tunis remarked on the state of the tourism industry, and the role technology is playing in pushing forward the sector.

Technology in the classroom: the question is not now “if” but “how”

In December 2018, the head of Information Technology Organization of Egy Department of Tourism, the ICT, said 70% of global internet users have electronic documents and 5.5 million emails are sent every second. Meanwhile, ICT Minister Mohammad Javad Azari Jahromi said that the government announced that the total amount of state-run organizations in Iran are currently offering e-services. He named Technical and Vocational Training Organizations, Audit Organization of Iran, Institute of Theater and Television Programs, and 60 thousand experts benefit from Pardis Technology Park. He announced that 28 thousand experts benefit from Pardis Technology Park.

Iran ranks 12th in internet user growth: report

According to the report, the release of the Bureaucrat capital firm based in San Francisco, more than half of the world’s population—3.8 billion—is online. China and India lead the pack followed by the U.S., Indonesia, and Pakistan.

Asian Pacific, home to 53 percent of global internet users, has all percent of internet users. The Middle East and Africa have 15% of global internet users live in Europe and the continent has 10% of the total internet users. The Africa and Middle East host 13% of internet users with 25% internet user penetration. Latin America and Caribbean have 10% of global internet users and 62% of internet user penetration. The North America have 49% of global internet users and 93% of internet user penetration. The report assures online platform time which means percent of users are currently using machine learning. Additionally, the results showed that machine learning is currently being used by 50% of travel companies. Only 24% were using AI technology, and 15% were using virtual assistants. The market for AI is currently using current technology, and 15% of internet users are currently using current technology.

Bedell partner Hotellia has released details of the audience surveys conducted at its recent MarketHub Americas and Europe events held this May in Casablanca and Tunis.

Participants at both MarketHub events—which were attended by over 700 senior representatives from travel agencies, tour operators, airlines and points of payment partners—were asked to take part in audience surveys digitally during the conference sessions. Attendees responded to a series of questions about their views and understanding of technology.

The results showed that while the Bureaucrat companies are aware of the importance of technology to drive growth in their business, most organizations in the Bureaucrat space are struggling to respond to technology on the scale it is happening. Furthermore, the Bureaucrat's members could boost their business by both improving their technology and their understanding of its benefits.

When attendees at the MarketHub Americas event were asked what they do on your consumer mobile website?, 44% of respondents said they needed a little help, 21% said they needed a lot of help, 6% admitted they were not sure and 1% did not have a site at all. Only 18% felt their mobile consumer site to be in its first iteration. Additionally, the results showed that machine learning is currently being used by 50% of travel companies. Only 24% were using AI technology, and 15% were using virtual assistants. The market for AI is currently using current technology, and 15% of internet users are currently using current technology.

Is inter-basin water transfer a remedy to quench dry lands?

By Khamouda Khrisradi

The report, Asia-Pacific Forest Sector Outlook Study III, highlights a number of challenges ahead.

First, the population of Asia and the Pacific is expected to add another 700 million people by 2050, more than 20 billion more by 2050, when about two-thirds of the region’s population are predicted to be living in urban areas. Second, the region’s population is predicted to reach 6.5 billion by 2050, including 500 million more by 2030, and about 200 million by 2060. The report warns that business as usual will lead us down a road that no one wants to travel, a dead-end road where natural resources have been squandered and exhausted. It suggests a more aggressive move toward an integrated landscape management plan that systematically deals with impacts in all natural resources – landscapes, forests, soils, water – and benefits communities.

The report finds that forested lands are under pressure. Already, the report finds, deforestation has, through global cycles of trade and consumption, led to an alarming decrease in annual per capita renewable water resources. Due to climate change, water demand will increase in the future due to the loss of biodiversity from disappearing primary forests, depleted water resources, deforestation, land for a variety of uses such as animal production. These trends will add further pressure on natural resources. If we do not act now, the report warns, the loss of biodiversity from disappearing primary forests, depleted water resources, deforestation, land for a variety of uses such as animal production, will result in a loss of biodiversity from disappearing primary forests, depleted water resources, deforestation, land for a variety of uses such as animal production.

Fortunately, the report finds that initiatives must be directed toward reforestation and afforestation, and the both sides of the conveying channel, to coordinate the possible conflicts and environmental quality problems between regions, and strengthen the argumentation of the ecological risk of water transfer and eco-compensation measures.

Most importantly there are some effective alternative measures for inter-basin water transfer schemes, such as each country’s importance to water recycling practices, improving water use efficiency, stopping sea water desalinization, and advancing rainwater harvesting technology. The positive impacts of inter-basin water transfer are likely to be more significant if, as a rule, we take corrective action – and do so quickly. To ensure a positive and resilient future for everyone, we need to make use of our resources.

Khamouda Khrisradi, is Assistant Director-General and Head of the FAO Forest Resource Management Services, Rome, FAO.
Saudia crown prince warns Turkey over Khashoggi probe

TEHRAN — Saudi Crown Prince Muhammad bin Salman has urged no exploitation of the killing of dissident journalist Jamal Khashoggi, which turned his international reputation, for political gains, in a speech broadcast on state television.

The prince said that the Saudi-led coalition in Yemen, which he chairs, had ended a five-year-old war against the Iranian-backed Houthis after a recent agreement between the Houthi and the United Nations. He added that the agreement marked a new phase in the war, with a political transition in Yemen. He also praised the role of the United States in the agreement.

On Tuesday, the prince said that the Saudi-led coalition had ended the war against the Houthi rebels in Yemen after a five-year-long conflict. He added that the agreement marked a new phase in the war, with a political transition in Yemen. He also praised the role of the United States in the agreement.

Iran men’s team sabre win silver at Asian championship

By Masoud Hossein

TEHRAN — Iran claimed a silver medal at the men’s sabre at the Asian fencing Championships in Chiba, Japan on Monday. The seeds of Mojtaba Abedini, Mohammad Rahbari and Ali Pakalani last to Sabre Men with 3-0 (25-20, 25-23, 25-22) and Goh and Hamed H each 45-42 in their final against Iran. Japan provided some home cheer in the Japanese city.

Lebanon are hoping to bounce back strongly against 2019 AFC U-20 Futsal Championship hosts, Islamic Republic of Iran, in a do-or-die eliminator final match on Tuesday.

“I tell my players that we need to take this challenge to bounce back,” said Lebanon head coach Tarek Risk. “We will work out. We will have it as a chance to say that we are ready to play against strong contenders.”

Lebanon started their Group G campaign against Kyrgyz Republic, a match they started in the back but after conceding in the first minute, but Tarek Risk’s side solidified to seal a 3-2 win.

Their next group opponents came in the form of heavyweight Thailand, and although Risk blamed the 2-1 defeat on fatigue, he identified the changes needed in his team for his boys to show their best against Iran.

“We were in the toughest group in the competition,” said Risk.

“I faced two teams with two different styles of play. We faced Kyrgyz Republic, who were strong and fast, and Thailand were fast and efficient. We won the first tough game and then fell to Thailand due to lapses in concentration and we were physically tired as well.”

“What we need to change for this quarterfinal is our mentality, confidence and responsibility. To play a strong game against Iran, we need to have this combo. If you miss one of these elements, you risk losing against a strong team supported by fans.”

Iran produce some top quality form to win Group A as they saw off a resilient Hong Kong before turning their attention to the power in the second semifinal to beat Afghanistan 3-2.

Head coach Hamid Moghadam expressed his satisfaction following their victory over their Central Asian neighbors, saying his team is growing from strength to strength with each passing game. “The victory we achieved against Afghanistan was very satisfying and enjoyable since they played very well,” said Moghadam.

“If we had lost the match, we would have a harder job to do now. I see my players performing well with each passing game and they’re finding their own way to play. I believe my players haven’t reached their excellent form yet, and we’ll try to reach it. My players have this pressure to win the title once again, but I see my players performing better and better.”

Iran extend winning run at Asian Beach Handball C’ship

Austria, Afghanistan, the Philippines, Indonesia and Qatar, while Iran are in Group B alongside with Oman, Saudi Arabia, Japan, Pakistan and Thailand.

The event also serves as qualifier for the 2020 Men’s Beach Handball World Championships in Italy. Qatar are the most decorated team in the Asian Beach Handball Championship. They have won the last four titles out of seven editions.

Iran’sPouria Fayazi joins MKS Bedzin

TASNIM — Iran international outside spiker Pouria Fayazi has joined Polish volleyball team MKS Bedzin.

Fayazi has signed a one-year contract with MKS Bedzin for an unresolved fee.

The 26-year-old player was a member of Sharjah Varmami and helped the Iranian team win 2019 Asian Club Championship. Fayazi has shown he is a series of eye-catching performances in Iran national volleyball team in the 2019 Volleyball Nations League. His movement to Poland shows his potential to be a Polish club PGE Skra Belchatów.

Asian Qualifiers draw to provide pathway to Qatar and China

The Asian Qualifiers draw for the FIFA World Cup Qatar 2022 Preliminary Competition and AFC Asian Cup China 2023 will be held on July 17, 2019 at the AFC House in Kuala Lumpur, Malaysia – it will feature top 40 nations with their pathway to glory.

The seedings for the draw will be based on the latest FIFA Rankings based on June 14, 2019 and following the conclusion of the Preliminary Joint Qualification Round 1 which in which Bangladesh, Cambodia, Guam, Malaysia and Mongolia advanced to Round 2.

The decision on the outcome of the match between Macau and the Philippines will also be part of the draw.

The 40 nations will be drawn into eight groups of five teams and compete in a double round robin format, with matches to be held on September 5, 2019 to June 9, 2020. Following the group games, the group winners and four best runners-up (total 12 teams) will compete in the World Cup finals and the final round of qualifying for the FIFA World Cup Qatar 2022.

The Asian Qualifiers draw is only a a small part of the joint qualifiers will compete in a separate competition for the remaining slots in the 24-team AFC Asian Cup China 2023.

Persh confirmed as host for Fed Cup final

Persh has been named host city for this year’s Fed Cup final between Austria and France, which will be held from November 9-10 at the RAC Arena.

This will be the first time in a decade Persh has hosted the Fed Cup and is also Australia’s first home final since 1978. “I’m excited to have the chance to stage the Fed Cup final here in Persh, and showcase the very best of women’s tennis right here in our backyard,” Australia’s Fed Cup captain Alicia Molik said in a statement on the Tennis Australia website.

“It’s particularly exciting to be making this announcement just a little over a week since Ashleigh Barty won the French Open.”

France reached their Fed Cup final after beating Romania in April while Bartley inspired Australia to their first final since 2003.

“I’m delighted that we are able to stage the Fed Cup final in Persh, it will be a fantastic showcase of women’s tennis,” Tennis Australia and Victorian Craig Tiley said.

Croatian Ambassador Stambuk, Culture Minister Salehi meet

TEHRAN — Croatian Ambassador Dražan Stambuk and Culture Minister of Croatia and Islamic Guidance Seyyed Abolhasem Salehi at his office in Tehran on Sunday to discuss the expansion of cultural relations.

"There are good intentions between the two countries to develop ties and hold the meeting," he added.

Stambuk also said that when he was appointed as ambassador to Iran he was told that he would be keeping the homeland of the country of U.S. sanctions.

"I tell them that I am going to the land of poetry because I believe that poetry is much stronger than economic sanctions," he added.

The ambassador announced Croatia’s plans to organize a number of art and cultural events for 2020 when the country will take over the European Union's presidency. He asked Iran to take part in the cultural events.

He also mentioned that his country is ready to host Iranian cultural delegations in other international cultural events of Croatia.

BIB winning illustrations to go on display in Qom

TEHRAN — An exhibition of 42 winning works from the Biennale of Illustrations Bratislava (BIB) will go on display at Edela Gallery in Qom on Thursday.

Shahab, Ambassador Jan Bory, Iranian member of BIB jury and a number of cultural officials and artists are scheduled to attend the opening ceremony, the Institute for Intellectual Development of Children and Young (IDCIA) announced on Monday.

Iranian artist Kamal Sheibani, the 2017 BIB winner, is scheduled to hold a workshop on children’s book illustration on the sidelines of the exhibition on June 26.

A poster for an exhibition of winning sculptures from the Biennale of Illustrations Bratislava, which will be held in Qom from June 26 to July 10.

Jagan festival to hold filmmaker Puran Derakhshandeh retrospective

SANTA FE, N.M. (AP) — New Mexico’s film industry appears to be on the brink of boom thanks to abortion law controversies in other states and expanded incentives.

A recent spike in film production in the state comes as Hollywood targets both Georgia and Louisiana over recently passed abortion laws, the Albuquerque Journal reported.

The political developments are being watched closely in New Mexico, which is prided to benefit even though state officials have said there’s no organized campaign to lure film productions from those states.

Sen. Nancy Rodriguez, D-Santa Fe, second from left, and Sen. Peter Wirth, D-Santa Fe, have sponsored bills to increase New Mexico's film rebates on qualifying expenditures on television shows. The bills are expected to save $1 million in state tax revenue.

In addition, NBCUniversal announced Friday it will build a facility and film studio in a district near downtown Albuquerque as it seeks to expand its footprint in one of the fastest-growing film production hubs in the world.

The company said it entered a 10-year venture with a developer to reshape an empty warehouse into a studio with two sound stages and offices. The studio will be used to produce shows for broadcast and cable channels.

The New Mexico Film Office said the coming Amazon TV series production was supervised by the landmark Roe vs. Wade ruling by the U.S. Supreme Court. An attempt to scrap the 1969 law failed during the last legislative session in the Democratic-controlled Senate. Democrats have downplayed the vote and have vowed to try again in the near future.

New Mexico was one of the first states to launch a film incentive program in 2003 and signed the ante with a new package of film and TV incentives to be awarded by lawmakers this year's 60-day legislative session and signed into law by Democratic Gov. Michelle Lujan Grisham in March.

Film companies receive 25 percent rebates on qualifying expenditures on goods and services in New Mexico. There is a 30 percent rebate for some TV shows.

In recent months, New Mexico's Film Office said it has received about two calls a day from production companies asking about the new incentives and possible locations in the state.

"We’re getting calls," Christie said. "If the script fits, they’ll come here. In some cases, they can change the scripts to fit New Mexico."
