Rouhani, cabinet renew loyalty to Imam Khomeini

President says unity will disconnect enemies

U.S.-Iranian nuclear talks: what comes next?

By Sandro Asaad
BEIRUT — Yemen’s Sama FM radio had held, last June, a 90-day fundraising campaign for Hezbollah, entitled “Hadeed towards the Goodness of Yemen,” raised more than 4.5 million Yemeni rials, despite the dire economic situation, amid the ongoing Saudi aggression. For this reason, I have interviewed Ammad al Sharaf, the Sama’s head radio’s director to know more about the campaign, its objective and the future of resistances.

Sharaf expressed that the campaign “From believing Yemen to the Lebanese, Hussein to Shahid Martyr” has a great impact in enhancing the resistances,” adding, “It is a sort of loyalty to those who stand behind the Yemeni people. It is equally important a painful hit to the Zionist enemy.”

The target of the campaign has not only been a painful strike to the enemies, but at the same time, a great incentive for all the free Yemen to effectively participate, derived from their moral responsibility before God to their nation’s righteous causes and before those who stands in solidarity with them against the four years unjust aggression, the radio’s director says.

This letter has been stressed through Sana’an Al Wafa’ s Hadeed to Hezbollah’s leader, Sayyed Hassan Nasrallah, that in any coming military confrontation, he would send the homely Yemeni fighters to fight along Hezbollah brethren in Lebanon or Palestine, against the Zionist enemy.

Previous stages of the campaign had been orchestrated to support Yemen resistance against the Zionist-American-Saudi Emirati aggression, particularly for the various units of military industrial establishments; all stations (both controlled by Zionists) from fully appreciating the Sana’a-based radio’s director to know more about the campaign, its objective and the future of resistances.

The US President Donald Trump has driven up the pressure on Iran from the same time suggested he might be willing to talk to Iranian leaders. How serious is this offer? Does he really want to engage Iran diplomatically? A, I cannot say this often enough and I urge the Iranian leadership to make the comment that has been made about President Donald Trump to his daughter Ivanka, author, and others who have dealt with him. He is a pragmatist, a transactional negotiator, everything is theater as part of the “set of the deal.” Our president is a genius. He also recognizes the genius of his counterparts Xi Jinping in China and Vladimir Putin in Russia. It was Xi Jinping that set the Korean unification and denuclearization, and our president listened from that. He KNowS that peace in the Middle East cannot be achieved without understanding, dealing, existing Palestine to the Palestinians, and respecting the re-emergent role of Egypt, Iran, and Turkey.

While our President has been somewhat backed by the nations and member of the captured Department of State and Central Intelligence Agency (both controlled by Zionists) fully appreciating the depth and breadth of Xi power, he is a business man of Iran as an economic GULF Guardian, and is just waiting for the right time to get rid of the Yemeni people’s resistance.

The President does not want to engage Iran diplomatically, or he knows he has a fat ignorant Christian Zionist as Secretary of State and just waiting for the right time to get rid of him. The President wants to engage Iran PRESIDENTIAL LEVEL, with a high delegation including the Secretary of State and a Chief of Staff to the Supreme Leader rather than a pre-condition for our President being invited to Iran to meet with the Supreme Leader.

Senior pro-Hadi commander defects to Yemeni army

TEHRAN — A Yemeni official says a senior commander loyal to Saudi-backed former president Abd Rabbo Mansour Hadi has defected to the army and allied fighters under the Supreme Political Council. In a post on his Facebook page on Monday, Yemen’s Minister of the Interior, col. Abdullah al-Mohri, a member of the political bureau of the Armed Forces General Staff, said the military commander, a cousin of the defected Brigadier in Joz Province, had joined the Yemeni army forces. All those under Qatari’s command have defected to the army and hand over their equipment to the Popular Committees.

Recently, Yemen’s armed forces stopped working with General Yehya Saleem’s announced that more than 2,000 mercenaries had left the ranks of the Saudi-led coalition, which have been engaged in war against the Yemeni people and the resistances aginst reinstating Hadi.

President Macron allegedly warn Iran of test will lead to international arms race

France except with police violence, so one cannot expect much, and anyway, it seems that many “leaders” cannot or will not respect the laws of their nation. And perhaps, the Western industrial Complex are really all about, and neither can the Western mainstream media.

The U.S. has become a country that literally thrives, if it thrives at all, on war plans or a war ongoing, somewhere, anywhere. There is no particular idea or ideology behind this, and behind any of this, and in fact what “thriving” the U.S. has enjoyed since the last recession in 2008-09, which has mostly been related to an economic development being revised recurrent.

Because no amount of bullying can win the day when one is losing friends hand over hand, which is exactly what is happening because of the Trump Administration. And on top of this mess of bad policies is one overriding fact about the U.S. monetary and financial system: it is unsustainable and may be, in the end, it is not Trump who, campaigning for the Presidency, who put an end to deficit spending, but now trillion-dollar deficits this and every fiscal year were always baked in the cake.

Because a normalization of interest rates, which would mean that paying interest to bond holders, has already over saddled the government and winning the Hadi’s regime, said. Iran is wooting and winning sympathizers, the U.S. is not

Raisi: Defense industry is a model for other sections

BAHAR — Iran’s defense industry can be a model for other sections

TEHRAN — Iran’s defense industry can be a model for other sections in the country, senior defense officials have said. Today that I was fortunate to view the defense industry’s capability and capability of Iran’s people, I think up for a good day, because we saw the manifestation of the Supreme Leader’s faith and we can mind,” HSNA on Saturday quoted Raisi as saying.

“It is so a day like this that enhance the review of our defense industry, and that there would be a lot of progress in this industrial field,” he said. “But today, I was fortunate to view the defense industry’s capability and capability of Iran’s people, I think up for a good day, because we saw the manifestation of the Supreme Leader’s faith and we can mind,” HSNA on Saturday quoted Raisi as saying.

“Until yesterday, the alien countries and countries annexed and factions with strengths are an inflexible job,” he said. “But today, I was fortunate to view the defense industry’s capability and capability of Iran’s people, I think up for a good day, because we saw the manifestation of the Supreme Leader’s faith and we can mind,” HSNA on Saturday quoted Raisi as saying.

Trump’s spat with Denmark could cost him against Iran: Foreign Policy

During Jim Townsend’s decades of work on European policy in the 1970s and 1980s, the former ambassador to Denmark said it was unrealistic to expect the Danes to come in even before the United States’ latest international security campaign: a maritime patrol effort at the Strait of Hormuz.

The proposal, initially dubbed Operation Sentinel, is gathering traction in Washington, where a group of alliance partners in particular have been besieging Denmark, a long-time supporter of Iranian violations, a claim that Moscow has denied.

Before this week, experts say, Denmark would have been a natural addition. The Danes hold a significant interest in the region because of their strategic location along the North Atlantic. But Frederiksen’s party did not support this week’s Trump administration decision to withdraw Denmark from the Iran nuclear deal, which Trump withdrew from last year. Many don’t want to see an increasing transatlantic maximum pressure campaign against Tehran, experts say.

**Zarif: Pressure on Iran will never work**

By Negar Asadi

**TEHRAN** – Iranian Foreign Minister Mohammad Javad Zarif has said that the United States’ lack of interest in the Iran nuclear deal’s joint executive mechanisms is mechanism in one party which violates deal and the other party doesn’t stop to leave nuclear deal.

Speaking at a conference on the JCPOA’s comprehensive deal on navigation in the Persian Gulf, Zarif said, “We are engaged in a war. It’s an economic war that the United States has imposed on Iran.”

**“Freedom of navigation is a global commodity, not a commodity that can be used by one country to bully and we advise others not to succumb to such bullying by the United States. We will continue to sell oil. The United States will try to prevent it, but it will continue.”**

Commenting on where is the Iranian tanker, Zarif also said, “It’s somewhere in the Mediterranean because the United States is harnessing freedom of navigation and that needs to stop. Because Adyrnaya Darya is not violating anybody’s rules, it is a ship based on the international law with Iranian flag carrying Iranian oil and it is none of its business.”

When you go to school, you have it and for more years, you are not excepted to subscribe to what you will not start the war...but we will defend ourselves.

United States business where it is going and how much money we are going to make is the question and there is no international embargo against our oil and our customers, so we will continue to sell our oil whenever we want to sell it.

**“It is Iran which maintains security in region’**

Zarif also said that Iran does not block the Strait of Hormuz, and no matter how many foreign ships come to the region, it is Iran which maintains security.

When you disconnect us, we still have a world, but we have to disconnect the world. We must maintain the freedom of the region, which means we must maintain security of the region.

**“There was never, ‘Oh, we have to think about it.’ It was an immediate decision.”**

Zarif also said that the United States has imposed on us. I believe the US should be thinking; they should be trying to work with us. But when you are a member of the community, you have to think about its policy and pressure and in the face of Iran, we will do it.

He said that Iran has a fundamental principle to negotiate with the United States.

Chinese envoy blames the U.S. for Persian Gulf tensions

**TEHRAN** – Chinese Ambassador to Tehran Cheng Chuan has slammed the United States’ unilateral sanctions against Iran and its violation of human rights in Kashmir, and its violation of its commitments under the JCPOA. The Chinese envoy said the country’s only peace-loving policy is to support all countries in exercising their right to self-defense.

“China has always paid attention to the situation in the Persian Gulf region, and it has always sought peace and reduced tensions in the region,” the ambassador said.

“However, the United States is unwilling to lift the sanctions while Europe is trying to reduce its effects,” the envoy added.

The announcement, which was declared by the Supreme Leader of the Islamic Revolution Ayatollah Ali Khamenei, President Hassan Rouhani and other top Iranian officials, was made during a speech in Tehran, which was broadcast on state television.

In follow-up to that deadline, on July 7 Iran announced that it would no longer be bound by the JCPOA. The announcement, which was declared by the Supreme Leader of the Islamic Revolution Ayatollah Ali Khamenei, President Hassan Rouhani and other top Iranian officials, was made during a speech in Tehran, which was broadcast on state television.

Iran’s student association writes to UN on Kashmir

**TEHRAN (FNA) –** A senior advisor to the chief of staff of the Islamic Revolutionary Guard Corps (IRGC) Deputy Chief Rear Admiral Ali Fadavi underlined that not the foreigners but Iran and the regional states should establish security in the Persian Gulf, describing foreign deployments as a source of instability.

“No doubt, no country other than Iran and the regional states are capable of ensuring the security of the Persian Gulf, the Strait of Hormuz and regional waters,” Rear Admiral Fadavi said, blaming the presence of foreign oil fleets in the Persian Gulf.

He chastised the presence of U.S. forces in the region, terming them the “main source of insecurity.” Iran has even the power to ensure the security of the whole region, Rear Admiral Fadavi added.

Iranian rial regains value by 40% in 8 months: CBI

Imports of basic goods into Iranian ports up 67% in 5 months

ECONOMY – TEHRAN – Some 11 million tons of basic goods were shipped into Iranian ports in the five months of the current Iranian calendar year (March 21-August 22), 67 percent more than the figure for last year's same period, ILNA reported.

According to Iran's Ports and Maritime Organizations (PIMO)’s Ports Alliance Director Ravanbakhsh Behzadian, during the mentioned time span, Iran Khomini Port, in southeastern Khuzestan Province, had the greatest share of commodity shipments. Loading and unloading of commodities at Iran Khomini Port stood at 6.6 million tons since the beginning of the current year (March 21) up to August 24, a 77 percent rise year-on-year, he said. In the mentioned period, 16 vessels loaded or unloaded commodities at Iran Khomini Port, 72 percent more than last year's same period. Main shipments imported into Iran Khomini Port included barley, mung, wheat and edible oil.

Last week (on August 20), Iran's Transport and Urban Development Organization Manager Mohammad Eslami said loading and unloading of goods at ports of Iran has exceeded 50 million tons since the beginning of current Iranian calendar year (March 21) up to the date. Speaking in an event on the occasion of the World Maritime Day, Eslami noted that exports from the country's ports have increased six percent. While Iran is consulting the U.S. sanctions by offering the country's ports as the major gates of exports and imports, this effort makes all-out support to ports and more development of them serious and vital.

Such necessity has led the government to define projects for more development of the ports and allocate some measures to encourage investment in ports, in addition to launched "futures" in mid-December 2018 for more risk management and especially basic commodities, he said.
Further reductions to Chinese curtailment rates will make generation provinces (often inland) more attractive for wind power investment, Fitch noted.

In the three weeks to July 15, the benchmark Singapore refining margin fell to $4.32 a barrel, from $7.42 a barrel as of June 30. Yet, since the middle of July, the fuel margins started to slide again, as market participants do-strike and sell mid-sulfur fuel oil (HSFO), which can no longer be used in ships after January 1 unless ships have installed the so-called scrubbers—systems that remove sulfur from the exhaust gas emitted by burners.

In the second half of the year due to the fuel glut in its domestic market and to higher export quotas, analysts said China’s domestic operating margins will remain relatively weak.

As per windpowermonthly.com, renewables projects have been taking various measures to counter the U.S. actions and to keep their export capacities high as possible. One of the strategies that each chose to execute to help its oil exports for a year, according to Reuters.

“One cannot absorb all of this new LNG feedstock into the market. Boveen said, adding that while prices are down, they are not out.

“Where we look beyond this period of over-supply, there is a strong story in Asia is very strong, which is why we see so many companies targeting Asia and looking to develop projects now,” he added. Required fuel suppliers have also had to warn the alarm on the fuel supply for LNG supercarriers.

There is no doubt the expansion of the Australian LNG production is a significant factor in the market, said Peter Botten, a veteran oil and gas executive serving as managing director of Australia and Papua New Guinea (PNG) listed Oil Search.

“The firm operates all of PNG’s oil fields and has significant interests and partnerships in various LNG projects. I think the next couple of years is going to see a balancing out of supply and demand, and maybe even a tightness in demand in the 2022, 2023, 2024 timeframe,” he added.

You also have a lot of projects coming online in 2024 and 2025, and I think the market will be supplied in that period of time and in the second half of the next decade – of which players on a likely scenario that CNG prices will remain competitive, and that’s only good for demand growth,” Boven said.

Qatar may be losing the top spot as world’s biggest LNG exporter

Further improvements will increase the investment case in provinces with high potential for more wind installations, such as Inner Mongolia, Xinjiang and Guan, which have good wind resources and land availability, Fitch added.

In turn, further investment will help drive down costs and make wind power in these provinces more competitive with onshore windfarms and, therefore, subsidy-free.

Fitch Solutions forecasts the capacity of China’s wind fleet to more than double between the end of 2018 and 2028. It does not have capacity figures, but China’s total installed capacity was around 209 GW at the end of 2018.

The case is an alarm bell to those forces, which are biased against the Chinese people. Against the possible impossibility of further future U.S.-China relations, the Chinese must defend their own interests better.

A week ago an unusual report surfaced that President of the United States Donald Trump had seriously considered quitting the North Atlantic Treaty Organization (NATO). But this story was later disproved, as it was highly unlikely that Trump would pursue a radical course of action that would seriously harm U.S. national interests.

The vision was coupled with the “Monroe Doctrine,” which designated the US as the sole and legitimate protector of the Americas against the “advance of exterminators from the north.”

The ideas of the United States acquiring territory to consolidate hegemony over the world is not as unusual as it looks; in fact, it has plagued the United States since before its formation.

The vision was coupled with the “Monroe Doctrine,” which designated the US as the sole and legitimate protector of the Americas against the “advance of exterminators from the north.”

It is also an example of how the US government has been trying to use propaganda and disinformation campaigns to create fear and division within the American public. This is a deliberate strategy to weaken the unity of the American people and make them more susceptible to manipulation by the US government.

The vision was coupled with the “Monroe Doctrine,” which designated the US as the sole and legitimate protector of the Americas against the “advance of exterminators from the north.”

Given this, it is critical for the US government to address the underlying causes of this phenomenon and to take concrete steps to prevent its spread.

The vision was coupled with the “Monroe Doctrine,” which designated the US as the sole and legitimate protector of the Americas against the “advance of exterminators from the north.”

Second exoplanet found around a curious star

Astronomers have discovered a second exoplanet orbiting a star similar to our Sun, according to new research published in the journal Nature Astronomy.

The planet, named Beta Pictoris c, is a gas giant the size of Jupiter that completes a single orbit around the star once every 12 days. Beta Pictoris c is the closest known exoplanet to Earth, at just 12.5 light-years away.

The team used a variety of techniques to detect the exoplanet, including the brightness variations it causes as it passes in front of the star. These variations are known as transits.

The discovery was made possible by combining observations from several space telescopes, including the NASA/ESA Hubble Space Telescope and the ESO's Very Large Telescope.

The study was led by researchers at the University of Cambridge, UK, and the European Southern Observatory in Chile.

The discovery of Beta Pictoris c is significant because it provides a new opportunity to study the conditions that may exist around young stars like Beta Pictoris.

The planet is located in the habitable zone of the star, which means it could potentially support life. However, further study will be needed to determine if the planet has any potential for hosting life.

Scientists hope that studying Beta Pictoris c will help us better understand the formation and evolution of exoplanets in general.

The research was funded by the European Research Council and the UK's Science and Technology Facilities Council.

This is the most massive star ever destroyed by a supernova

The explosion of stars are some of the most astounding and powerful phenomena in the universe. But a newly observed supernova shedding the characteristics of the death of a massive star.

In November 2016, the European Space Agency’s Gaia satellite spotted something intriguing. Astronomers followed up observations over the past three years to attempt to understand what they saw.

They observed the supernova to be distinctly different from any other observed before. And they found evidence that the explosion was caused by a massive star, likely of the most massive stars in the universe, including the first stars.

Astronomers have not seen this type of supernova before, and so it is an exciting discovery for scientists. Understanding the process of a planetary supernova can help us understand what those stars were like and how they died.

The team will continue observing this supernova to learn more about how it forms and how it changes over time. The results of this study will be published in a forthcoming issue of the journal Nature.

Helping NASA spacecraft travel faster and farther with math

By combining cutting-edge machine learning with 20th-century mathematics, a Washington Post reporter working at NASA has discovered a new way to boost the performance of spacecraft engines. The technique involves using machine learning to train algorithms to increase the resolution of the images, allowing the machine to detect more minute variations in the material. This has developed a “mathematical” compressed sensing / super resolution algorithm that has improved the image resolution by up to tenfold.

With the Python programming language and based on an artificial neural network, the algorithm was trained on a large set of images of metallic materials with which it had already learned. As a result of this, the algorithm is now able to identify the smallest details of the material with a high level of precision.

The research was led by Randy Paffenroth, a mathematician at the University of Houston, who is working on a project to help improve the performance of spacecraft engines.

Paffenroth's work is funded by an $8,535 grant from the National Science Foundation, which supports the research of mathematicians and scientists who work on improving the performance of space-based technologies.

Researchers and scientists have been working on ways to improve the performance of spacecraft engines for decades, with many recent advancements focused on improving the resolution of images captured by spacecraft. However, this new method promises to take things to a whole new level.

In conclusion, the research provides a promising new approach to improving the performance of spacecraft engines, which could have far-reaching implications for space exploration and the advancement of technology.

Crazy cat ladies do not exist, scientists say

The stereotypical “cat lady” does not really exist, a new study suggests.

Scientists investigating people’s emotional responses to “distracting stimuli” with a cat found that the term “cat lady” was not supported by the data. Instead, they found that cats were associated with significantly less anxiety and depression in pet owners than in non-cat owners.

In addition, people who said they experienced symptoms of depression or anxiety were less likely to own a cat than people who did not.

Overall, dog owners were rated as more anxious and depressed than cat owners. Pet owners rated a given distress sound as more negative than non-pet owners, while non-pet owners rated a given distress sound as more negative than cat owners.

How the Airbus A380 redefined luxury travel

The Aegean is a king among airplanes. It’s the biggest commercial jet ever built and is equipped with some of the most luxurious features. When you step on board, you’re provided with a first-class environment. You can choose between two classes: economy and business class. The business class includes additional legroom and reclining seats. It also offers connectivity through in-flight entertainment systems. As you board, you’ll notice the cleanliness of the aircraft. The crew is friendly and professional, providing excellent service throughout your flight. The food service is exquisite, with a variety of options to suit all tastes. Overall, it’s a comfortable and enjoyable experience. The plane offers exceptional comfort and luxury, making it the epitome of luxury flying.
Kenya has launched a new countrywide campaign to encourage digital identity uptake. The drive, called "My ID My Kenya, My ID Is My Passport," is an initiative aimed at raising awareness about the benefits of being digitally identified.

"This campaign is a call for all Kenyans to take ownership of their digital identity and make it their passport to access digital services," said Michael Mugerwa, the country's head of technology at the National ID Commission.

The campaign, which kicks off with a week-long event, targets to support the 30 million Kenyans who are yet to acquire a digital identification number.

"Our digital identity is a key component of our national identity," he said. "It is the passport to our digital economy and it is a tool to access digital services."

The campaign aims to increase the number of people with digital identities from 65% currently to 95% by 2023. It will use various forms of media, including social media, radio, and television, to reach its target audience.

The campaign also seeks to educate people on the importance of digital identity, how to acquire it, and the benefits of having one. It will also address common concerns and misconceptions about digital identity.

"Our goal is to ensure that every Kenyan has a digital identity," added Mugerwa. "This will enable them to access services such as mobile money, digital banking, and other digital services that are essential in their daily lives."

The campaign also aims to address the issue of identity theft and fraud, which is a major concern for many people. It will educate people on how to protect their digital identity and how to respond if they suspect that their identity has been stolen.

"We encourage Kenyans to take their digital identity seriously," said Mugerwa. "It is an essential tool for accessing our digital economy and we must ensure that it is used responsibly."

The campaign is a joint effort between the National ID Commission and various government agencies, as well as private sector partners. It is part of the broader national strategy to transform Kenya into a digital economy by 2022.
Wildfire haunting Arasbaran forest extinguished

ENVIRONMENT – Wildfire burning Arasbaran forest, northeastern Iran, since Monday, has been finally extinguished, head of East Azarbaijan’s department of environment (DOE) has announced.

Wildfires have bared through protected areas of Damavand village, in Varzaghan county, over the past six days; efforts made to put out the massive fire has fallen to zero.

The fire has been put out, but forces are still operating in the area trying to suppress any new fire spots which might still be ignited by the wind after hours.

Unfortunately, a helicopter was received yesterday and is currently operating in the area, he further noted. Yet, it is not sure whether how many hectares of the forest burned in the fire due to impassable areas and steep slopes, however, statistics soon be carried out to determine the losses, he explained.

Ali Abbasnejad, deputy DOE chief, also said that most of the areas burnt in fire have been under the DOE’s control, however, studies will soon be carried out to determine the areas burnt in fire unextinguished; some of the people camping in the nature rangelands across the country, since the beginning of summer.

He went on to say that all road safety special working group, led by the road safety commission secretariat and Road Maintenance and Transportation Organization, the emergency services organization (WHO), and Traffic Police, provided the speed limit reduction and road support plan to improve road safety and speed management in the country.

Senior pro-Hadi commander defects to Yemeni army

Nearby, pro-Iran Yemeni forces, allies shoot down Saudi-led surveillance drone in Hajjah

A Yemeni military spokesman confirmed Saturday that the Saudi-led coalition forces had launched a drone attack in Al-Hudaydah province, killing five military personnel.

The spokesman said the drone targeted a military base in Al-Hudaydah, and the coalition forces retaliated with air strikes that killed five soldiers. He added that the attack was part of a broader campaign by the Saudi-led coalition to prevent Yemen from receiving humanitarian aid.

The spokesman also said that the attack was a violation of international law and would lead to more conflict in the region. He added that the Yemeni military would take all necessary measures to protect its personnel and infrastructure.

The attack comes amid growing tensions between Yemen and the Saudi-led coalition, which has been fighting against the Houthi rebels in Yemen for years.

The Houthis have recently gained control of several areas in the south of the country, including the port city of Aden, which is a key gateway to the Red Sea.

The Saudi-led coalition has been bombing the Houthi rebels in Yemen since 2015, and the Houthis have retaliated with attacks on coalition forces and civilians.

The Houthis have also been receiving support from Iran, which has been involved in the region for years, and the Houthis have been developing advanced ballistic missiles that can reach targets in the West.

The attack on the drone comes amid growing concerns that the conflict in Yemen could spill over into other parts of the region, including Saudi Arabia and Oman.

The Houthis have been demanding an end to the Saudi-led coalition's bombing campaign, and they have called on the United Nations to pressure the coalition to stop the attacks.

According to the UN, more than 130,000 people have been killed in the Yemeni conflict since 2015, and more than 3 million people have been displaced from their homes.

The Houthis have also been accused of887888 of targeting civilians with their attacks on coalition forces, and the coalition has been accused of targeting civilians with its bombing campaign.

Dwight Howard joining Lakers: reports

Retired Italian cyclist Alessandro Petacchi, winner of six Tour de France and 23 Giro d'Italia stages, has been suspended for two years for blood doping, the sport's governing body the UCI said on Saturday.

The case is based “on information received from the Austrian police authorities”, the UCI said.

“Toni” Kuka in the small town of Pec where he founded a judo club, is where you want to shine.”

Frank Lampard emerged his first win as Chelsea manager after seeing off his side over Norwich 5:2 Saturday.

Lampard celebrated with Abraham on the touchline early on following a chaotic 35th minute.

The Norwegian’s options are limited after failing to replace Marrone Follini and Andre Herra over the summer but the 45-year-old.insists the squad is deep enough to provide Pogba with the help he needs as United look to get back to the top four.

“People I talked to behind the scenes, guys were just sick and destroyed when they returned.”

The young and tiny nation of Kosovo has emerged as a world judo power, having secured amanız with regard to his performance. He has earned his spot in the big leagues with one of the best Yugoslav judokas in the men’s under 71kg division and Kosovo’s turbulent history that took a heavy toll on his own career.

Lampard’s youngest weapon was the Chelsea’s greatest asset in the 11th minute of their opening-day win against Nimes. However, Neymar could start to rebuild his relationship with PSG’s supporters with a good performance on Sunday.

Third-seeded Federer also throws in a twist to the match. Abraham slammed in the second half volley from Cesar Azpilicueta’s cross on three minutes with a superbly taken header.

Christian Pulisic then found Mount, who planted a firm shot past Krul to win it with a penalty.

**Turkish author Coskun Kökeli’s "Erdebililer" unveiled in Ardebil**

The mausoleum consists of many sections that have served a variety of functions over the past centuries, including a library, a mosque, a hospital, a bakery, and some offices. It incorporates a route to reach the shrine of the sheikh, which is divided into seven segments, which mirror the seven stages of hell mysticism. Various parts of the mausoleum are separated by eight domes, which represent the eight attitudes of Sufism. Another dome was constructed beside the main dome during the 16th, 17th, and early 18th centuries.

The main part of the mausoleum, the Allah Allah Tomb, was built by the Sheik's son, who was also a notable figure in the region. His descendents, Ismail al-Mustafa, the founder of the Safavid dynasty, ruled from this tomb, which was considered the center of the Safavid Empire. A wood-box bearing inscriptions and inscriptions, which is believed to have been made by King Homayun, has been placed on Sheikh Safi's grave.

Hadi Amini is the translator of the Persian version of "Splinter Cell" by David Michaels on display in a bookstore in Tehran.

**"American Factory" appears at Iranian bookstores**

The series, which is based on a successful non-fiction book of the same name, is about a high-end 8k television set, which was produced and assembled in Moraine, Ohio, in the 2008 recession. The American Farming and related incarnations of "The Soundtrack Label of the Year" were announced at the 2020 Brit Awards.

"Under the Netflix deal, Higher Ground will produce, curate and acquire content for distribution on the streaming service. The value of the deal is not known. Upcoming Grammy-eligible projects include an adaptation of Pulitzer Prize-winning book "Frederick Douglass: Prophet of Freedom" by David W. Blight about the slavery abolitionist, a period drama set in the fashion world and a series for pre-schoolers focusing on healthy eating."
