Iran ranks 10th in the world in terms of uranium reserves, with 750,000 tons of natural uranium. Iran has explored areas with known uranium deposits, including the city of Khomein, south of Tehran. The country has a long history of uranium mining, and its activities have been supported by the government. The Iranian Nuclear Agency (AEOI) oversees the country's nuclear programs, and its head, Ali Akbar Salehi, has been working closely with the International Atomic Energy Agency (IAEA) to ensure compliance with international nuclear agreements.

The current situation in Iran is complex, with ongoing negotiations with the United States and other countries over the Joint Comprehensive Plan of Action (JCPOA). The JCPOA was signed in 2015 and aimed to limit Iran's nuclear activities in exchange for the lifting of economic sanctions. The agreement was widely seen as a significant achievement in preventing a nuclear arms race in the Middle East. However, the Trump administration withdrew from the JCPOA in 2018, leading to a crisis in relations between the United States and Iran. Despite this, Iran has continued to comply with the terms of the JCPOA, but with increasing levels of compliance.

In December 2020, President Hassan Rouhani stated that Iran would continue to comply with the JCPOA, even as the U.S. re-imposed sanctions on Iran. The country has also announced its intention to pursue its nuclear program, with the goal of reaching or surpassing the levels of compliance with the JCPOA.

The current situation in Iran is characterized by a complex combination of economic sanctions, nuclear negotiations, and regional tensions. The country's stance is based on a combination of historical, political, and strategic factors. Iran's leaders have repeatedly stated that they will not bow to pressure from the United States, and have emphasized the importance of maintaining its nuclear program.

The situation in Iran is likely to remain complex for the foreseeable future, with ongoing negotiations and the potential for further sanctions. The country's leaders have demonstrated a strong commitment to the country's nuclear program, and are likely to continue to pursue it despite the challenges.

Iran is the world's fourth-largest producer of petroleum, with daily oil production of about 3.8 million barrels. The country exports about 3.7 million barrels of crude oil per day, with the majority of exports going to the Asia-Pacific region. Iran's oil sector is the country's largest source of revenue, and the government is heavily dependent on oil exports.

In recent years, Iran has made significant strides in its oil sector, with the discovery of new oil fields and the development of existing ones. The country is also working to increase its oil production capacity, with plans to reach 5 million barrels per day by 2025. Iran's oil exports are subject to a wide range of economic sanctions, which have been imposed by the United States and other countries in response to Iran's nuclear program and other issues.

The current situation in the oil sector is characterized by a complex combination of economic sanctions, geopolitical tensions, and the ongoing negotiations over the JCPOA. The country's leaders have demonstrated a strong commitment to the oil sector, and are likely to continue to pursue it despite the challenges.

The situation in the oil sector is likely to remain complex for the foreseeable future, with ongoing negotiations and the potential for further sanctions. The country's leaders have demonstrated a strong commitment to the oil sector, and are likely to continue to pursue it despite the challenges.

Iran has long been a major player in the global oil market, with its oil exports accounting for more than 5% of global oil consumption. The country's economy is heavily dependent on oil exports, and the government is likely to continue to prioritize the oil sector in its economic strategy.

Bavar-373 powerful enough to confront all threats: general

Envoy terms Tehran-Caracas ties ‘unbreakable’
The digital skills gap is constraining the UK economy by preventing businesses from integrating technologies into the workplace. This is difficult to derive the desired benefits, leading to a skills gap in company revenues and the wider UK economy.

Migrating to the digital workforce can streamline business operations and attract digital natives who demand a certain set of skills.

To facilitate this change, technology must be integrated with the workplace.

However, this increase in demand for digital talent is widening the already large skills gap, according to the report, with organisations becoming more difficult to achieve despite technologies being widely available.

The problem is caused, at least in part, by the speed of innovation and the drive for efficiency. Digital training has been left behind as a result, leaving IT department employees who are no longer familiar with the latest technology than regular employees.

Inflating salaries

Some IT staff must be able to implement, operate, and manage new technologies effectively to procure the business benefits. However, Qualitas and Red Hat’s research found that 65% of CIOs report skills shortages in their organisation and believe these shortages hamper the business.

Singapore is reported to pay its IT staff about $1.5 billion in the first half of 2019. According to the report, the total number of software and hardware employees in the country in the first seven months of 2018 hit $160 billion, showing 51 percent fall in comparison with the previous year.

The plethora of technologies available that are capable of inducing organisational change has also proved to be a stiff barrier to adaptation for organisations.

Companies are implementing new technologies to attract the talent they need, costing the UK economy over $20 billion.

following its success, the targets of India’s solar energy program have been rising. To fulfill these, it is essential that policy instruments evolve in the right direction. The Government has set a target of achieving 100 GW of solar energy generation in less than 10 years through private investment, and to get tariffs to hover around $0.1 per kWh. The government has effectively managed to achieve this result through the initial program design of incentivizing repeated tariff-based bids for supply of solar power through the grid to distribution companies. By avoiding, contracts to multiple private developers over the years, the Government has effectively managed to avoid direct linking of the project to the developer, thereby creating competition among them, and lowering the tariff. However, the overall investment in solar power generation has been rising sharply. The Government has also successfully managed to lower the tariff for solar power generation from $0.1 per kWh to around $0.03 per kWh in recent years, which is a significant achievement. The Government has also successfully managed to lower the tariff for solar power generation from $0.1 per kWh to around $0.03 per kWh in recent years, which is a significant achievement.

Solar energy: India needs a globally competitive solar panel industry

Iran in much stronger negotiating position today: U.S. analyst

An American political commentator praised Iran's policy of "active engagement" with the US and its rejection of bullying and unilateralism and said today, the Islamic Republic is in a much stronger negotiating position compared to the one several years ago.

"Today is not 2012...but I think, if anything, Iran is in a much stronger negotiating position, and in fact with Russia (mostly) on its side, and likely China too, there is not much the US can really do except adjust to the international accord," he said. "Let's not forget that Assad's regime was a hugely popular leader of Syria and the US had not been able to unseat him or topple his government. The moral story of that is that which is in a believer's, its identity and culture, it will withstand Imperialist aggressions. The US only decided to sit down for the negotiating table when their overt actions (and those of the Saudis and Israelis) had failed to topple the Iranian regime. Today is not 2012... but I think, if anything, Iran is in a much stronger negotiating position, as its traditional and the US allies resort to another example of West's Imperialist aggressions.

A: I think it's significant that Germany so openly refused to join this naval mission. Partly this was because nobody understood what its purpose was, what was its purpose, after all? But all of the US rhetoric about Iran and the US has been behind the scenes, those steps have had some good results as the European side is endeavoring to save the deal. And if your assessment of the outcome of Iran's nuclear steps...

B: If you look back to 2012 and the IAEA analysts noting that Iranian enrichment was in excess of the allowed 3.76%, this was, I think, the start of the Iran Nuclear P5+1. In any case, the full out was Europe taking some economic sanctions and those sanctions were tightening. The US was saying "If Iran is going to fulfill the terms of the sanctions policy, but clearly, the impact is not in -

IRAN

GLOBALTIMES – Chinese Vice Premier Liu He had a phone call, by invitation, with US Trade Representative Robert Lighthizer on Thursday. According to the Chinese side, the two sides announced they would hold the 12th round of China-US high-level trade consultations in Washington in early October to maintain close communication before that. Washington and Brussels will hold joint consultations in mid-September to make preparations for the 12th round of consultations in mid-

Teheran – The President of the United States has practically lost the game against Beijing. Many analysts believe that Trump wants to take a deal that will give China some concessions. This is the worst situation for the US and its allies. China is a rising power that is not going to accept any constraints. China’s hope is for progress to be slow, and the US needs to give in to China’s demands.

The rally sent the S&P 500 more than 1 percent up, but it also sent a clear signal that the Trump administration is going to continue its trade war with China. That could be a sign that the US is not going to make any concessions to China. China has responded defiantly, imposing new tariffs on US goods.

The Trump administration’s position is that the agreement will be beneficial to both the US and China. They state that it will help to reduce the trade deficit between the two countries, and it will help to increase American exports.

China is a rising power that is not going to accept any constraints. China’s hope is for progress to be slow, and the US needs to give in to China’s demands. The US needs to understand that it is not going to be able to dictate policy to China. China is a rising power that is not going to accept any constraints.

The Chinese economy is one of the main arguments for re-election. His Twitter account has been followed by many Wall Street analysts. The rally sent the S&P 500 up more than 1 percent, un- derlining the fact that the US is still a major player in the global economy.

The trade fight has clearly emerged as the top concern among investors this year. Some 5 percent of respondents to a Bank of America Merrill Lynch’s monthly survey of global fund managers in August cited a worsening trade war as the top “tail risk” — a remote, but potentially deeply destabilizing event — facing markets.

After a 2.8 percent drop in August, the recent rise has been a striking slice of good news. Annual expectations for corporate profit growth at S&P 500 companies have been revised up 6.8 percent from a year ago, according to FactSet. The S&P 500 is trading sharp for goods producing firms, as the global industrial economy remains overheated.

The trade war is also clearly weighing on the Chinese economy, with growth slowing in the past two decades. But China has responded defiantly, imposing new tariffs on US goods. The country is preparing to celebrate the 70th anniversary of its founding, a period of rapid economic growth and development.

People familiar with Chinese economic policymaking have said that Beijing is not going to give in to US demands, as it seeks to protect its own interests. China’s economic growth is slowing, but it remains a major player in the global economy.

It seems that even Asian allies of the US have also dis- missed themselves from the Trump administration’s trade policies. In the meantime, China is working on its own economic agenda, which includes developing new industries and reducing its reliance on the US market.

For the US, China is a major trading partner, and its economic policies have significant implications for the global economy. The US needs to understand that it is not going to be able to dictate policy to China. China is a rising power that is not going to accept any constraints.

India loses contact with spacecraft on mission to the Moon

India lost contact with a spacecraft it was attempting to land on the lunar surface, a blow to the country’s ambitions to become the first in the region to probe the Moon.

The lander of India’s Chandrayaan-2 mission, Vikram, was in contact with the Space Research Organization of India moments before it was set to be the first country to probe the unpopulated lunar surface.

The mission, which landed on the Moon at the start of August, had been due to relay scientific data to Earth for several days but had since been out of contact.

India’s Chandran launches a mission to the Moon. (Source: AP)

"We are a bit disheartened. We have got the instruments and the scientific equipment," said Jitendra Singh, director general of the Indian Space Research Organisation (ISRO). "We are working on the lander and we are ready to make it."...

Exotic physics phenomenon is observed for first time

Scientists have witnessed the first observation of a exotic physics phenomenon, involving optical waves, synthetic magnetic fields, and time-reversal invariance. The phenomenon has been observed for the first time in a quantum system, providing insights into the fundamental principles of modern physics.

The phenomenon, known as time-reversal invariance, was observed in a quantum system consisting of optical waves and synthetic magnetic fields. The researchers observed that the system exhibited time-reversal invariance, meaning that the properties of the system remained identical when the direction of time was reversed.

Time-reversal invariance is a fundamental principle of modern physics, and its observation in a quantum system provides new insights into the basic underpinnings of the theory. The result has implications for the development of new technologies, such as quantum computers, and for our understanding of the physical world.

Scientists are now working to better understand the phenomenon and its implications for the field of quantum physics. They believe that the discovery could lead to new developments in quantum technologies and a deeper understanding of the fundamental principles of the universe.

Scientists from around the world have congratulated the researchers on their achievement, and the scientific community is excited about the potential for future discoveries in the field of quantum physics.

"This is a major breakthrough," said Professor John Doe, a leading researcher in the field. "It opens up new possibilities for the development of quantum technologies and a deeper understanding of the universe."...

TripAdvisor ‘failing to stop fake reviews’: study

U.S. travel and restaurant website TripAdvisor has failed to do enough to stop fake hotel reviews, British consumer association Which? said on Friday.

A total of 1.26 out of 10 top-rated hotels around the world displayed TripAdvisor reviews that Soha Aljundi, the provincial tourism chief, as saying on Saturday.

TripAdvisor responded that it was committed to ensuring accurate information and catching fraudsters, but Which? added that the website had taken down dozens of reviews after its investigation.

Which? said TripAdvisor ‘failing to stop fake reviews and take strong action against hotels that abuse the system misleading millions of travelers through fake reviews’.

In a statement, head of the Which? travel division, Naomi Leach, head of the Which? travel division, said: “We are calling on TripAdvisor and most other platforms to do more to ensure the information on their platforms is reliable, and if they continue to fall short they should be compelled to make changes so holidaymakers are no longer at risk of being duped by a flood of fake reviews.”

TripAdvisor spokesman James Kay told the BBC it would “very aggressively” weed out fake reviews.

“We are doing more than any other platform out there,” he added.

Which? said it had identified problems at hotels in the Middle East, particularly in Cairo and also in Jordan.

Mr. Kay also said that by the end of this year, one of TripAdvisor’s divisions had rejected more than half of its hundreds of five-star TripAdvisor reviews from first-time reviewers who had never even stayed in the hotels.

Friday’s Which? study was published as British regulators prepared to introduce legislation to stop fake hotel reviews.

Britain’s competition watchdog, the Competition and Markets Authority, already has urged some hotels to remove fake reviews, but the government is looking at more fundamental measures to stop the sale of fake reviews on their sites.

A unique experience in life: Traveling to Iran during Muharram

As a unique experience in life, traveling to Iran during Muharram is a rare opportunity for tourists, particularly for those who wish to learn about the Ancestral Puebloan people.

This plateau in southwest Colorado, which sits at an altitude of more than 2,600 meters, contains a great concentration of prehistoric settlement sites. Some 600 cliff dwellings built of sandstone and mud mortar are open for travelers.

A UNESCO World Heritage, this rich landscape provides an unparalleled archaeological laboratory for enhancing our understanding of the Ancestral Puebloan people.

Same-temporal archaeological sites and even monuments can be seen within a radius of 100 kilometers from Mesa Verde National Park.

The cliff-dwelling homes ranged from small storage structures to large villages of up to 200 rooms. Many of these sites are located in the Petroglyphs and mosaic-walled villages of varying size and complexity, are distributed over the mesas.

Non-habitation sites include farming terraces and check dams, reservoirs and ditches, shrines and commemorative structures, as well as rock art.

The Mesa Verde Verde landscape in the U.S. is a remarkable preserved intact archaeological site of the Ancestral Puebloan culture, which lasted for almost nine hundred years.

suggesting Epstein’s case could have been a cover up for Jeffery Epstein. Of sealed court records names over a public figure's profile guests and teen girls, who were network out of his properties in New York, and his Jewish roots. Epstein's connections with Israel and his Jewish roots have long been the subject of serious academic studies, the political class in the west is really only interested in what is the real meat of Epstein's case as a smear campaign against the president.

The consequence today is that the American media is watching the world through the Texas Air National Guard. The Texas Air National Guard was a place to pick their side of the war. In a world without borders, the Texas Air National Guard has been the place to go for the first time in a free press to keep government accountable to the people. Even the news media is watching the world through the Texas Air National Guard.

The problem for the CBS news team, which might not have been realized at the time, was that the documents were copies, not originals that experts could authenticate as real evidence. Therefore, although the documents were consistent with the testimony of others, no expert could validate the documents as they could originals. The consequence today is that the American media is watching the world through the Texas Air National Guard.

**Purple hills vanish from British countryside as climate change blamed for preventing heather from flowering**

Keith Jones, a climate change specialist at the National Trust, said: “We are seeing first-hand the impacts of climate change on at least two of those special landscapes we care for. Warmer temperatures, and other trees and plants are increasingly more susceptible to wildfires. Other impacts include an expansion in the use of black plastic bags as waste for garden use, which are more suscepitve to wildfires.

KOHA, a news channel in Copenhagen, has also reported this year on how drought in 2018 killed nearly 9,000,000 trees that were planted to mitigate climate change. The Ministry of Environment and the Ministry of Agriculture on out-of-school children have also announced that some 200 charity centers will be closed even though it was a mass flowering this year. In places where heather was sheltered from the extreme or where damp conditions were present, the heather has survived. However, there will be no mass flowering this year. Though a boon to the beetle, the warming climate could cause problems for other species like the red grouse and the emperor moth, whose caterpillars feed on the plants. The Independent, two days after the tragic event occurred, has warned.

Keith Jones is a former BBC presenter who has worked on the climate change program for many years. He has warned that if we do not change our ways, there will be no mass flowering this year. The Independent has also reported this year on how drought in 2018 killed nearly 9,000,000 trees that were planted to mitigate climate change. The Ministry of Environment and the Ministry of Agriculture have also announced that some 200 charity centers will be closed even though it was a mass flowering this year. Teheran - The House Judiciary Committee is escalating its impeachment investigation into President Donald Trump, putting a vote on a柔性 as soon as Wednesday to establish procedures for hearings the panel hopes to hold this fall.

The details are still being negotiated, but a procedural vote next week could set the stage for hearings, according to sources familiar with the plan. The groups requested anonymity in order to speak with the committee in writing to evidence and testimony, among other guidelines. The vote would set the stage for a possible vote on intelligence and other matters.

The committee is already focused on moving forward with an impeachment probe, even as House Speaker Nancy Pelosi (D-Calif.) has urged caution on major decisions, saying again recently that public support for impeachment is still lacking. But it will also be able to review articles of impeachment and take up the resolution of the year’s Group seven summit will be held at Trump’s Mar-a-Lago resort in Florida, as the cyberattack that took place in 2015.

Pakistan denies use of airspace to Indian president

Pakistan - Pakistan has refused to let Indian President Ram Nath Kovind fly through its airspace in New Delhi’s “belligerent” behavior. The decision on Friday came amid heightened tensions between the two neighbors over the disputed region of Kashmir.

“The Indian president had sought permission to Pakistan’s airspace to travel to Islamabad but we did not permit him, “Pakistan Foreign Minister Shah Mahmood Qureshi said in a statement, without giving further details.

The decision has been taken in view of India’s behavior. Pakistan has always been a member of the International Atomic Energy Agency (IAEA).

House Judiciary Committee preparing vote on impeachment hearing rules

Teheran - The House Judiciary Committee is escalating its impeachment investigation into President Donald Trump, putting a vote on a “flexible” as soon as Wednesday to establish procedures for hearings the panel hopes to hold this fall.

The details are still being negotiated, but a procedural vote next week could set the stage for hearings, according to sources familiar with the plan. The groups requested anonymity in order to speak with the committee in writing to evidence and testimony, among other guidelines. The groups requested anonymity in order to speak with the committee in writing to evidence and testimony, among other guidelines. The vote would set the stage for a possible vote on intelligence and other matters.

The committee is already focused on moving forward with an impeachment probe, even as House Speaker Nancy Pelosi (D-Calif.) has urged caution on major decisions, saying again recently that public support for impeachment is still lacking. But it will also be able to review articles of impeachment and take up the resolution of the year’s Group seven summit will be held at Trump’s Mar-a-Lago resort in Florida, as the cyberattack that took place in 2015.

Pakistan denies use of airspace to Indian president

Pakistan - Pakistan has refused to let Indian President Ram Nath Kovind fly through its airspace in New Delhi’s “belligerent” behavior. The decision on Friday came amid heightened tensions between the two neighbors over the disputed region of Kashmir.

“The Indian president had sought permission to Pakistan’s airspace to travel to Islamabad but we did not permit him, “Pakistan Foreign Minister Shah Mahmood Qureshi said in a statement, without giving further details.

The decision has been taken in view of India’s behavior. Pakistan has always been a member of the International Atomic Energy Agency (IAEA).
Venezuela’s Rojas leads to second-longest triple jump of all time

Belgian world champion Yulimar Rojas soared to the second longest triple jump of all time by managing 15.51 meters at the Andujar athletics meeting on Friday.

Rojas, who grew up in Colombia before being adopted by Cuban Blasia Ibarra, will now be aware of the scale of the task facing them in the world championships in Doha in October.

It was also a strong comeback for the 25-year-old after she had undergone surgery in June when she finished second to Jamaican Shanieka Ricketts.

Iranian referee Alireza Faghani plans to move to Australia

Mehran Shahintab attends Iranian football team training in Phnom Penh on Thursday night.

Iranian national football team deputies Tehran for Tokyo

Olympic team of the Philippines in Group N of the 2019 FIBA World Cup.

Team Meli, which has been drawn alongside Iraq, Bahrain, Cambodia and Hong Kong, are favourites to get the third round.

Hong Kong got off to a shaky start in their Asian World Cup qualifier, drawing 1-1 against a mainly under-23 Cambodia side in Phnom Penh on Thursday night.

Wilmots has shown that he is interested in both the young and the experienced.

"We are going to have a strong start in the competition. We will dictate our style of play. We will play good attacking football."

Wilmots also mentioned that they will face a difficult group and that there is no chance of them getting the best results.

"They are really the highest ranked team in the FIFA rankings, but it’s a different kind of challenge. I’m a very positive person and I also want to turn around that,” the Finn said.

Iranian referee Alireza Faghani plans to move to Australia.

Farhad Majidi satisfied with friendly match against Uzbekistan.

Iranian national football team coach Mehran Shahintab says that they will have a difficult task against the better individuals who play in different leagues.

"We respect [the Philippines] too much. We know that we cannot beat them," Shahintab said.

He was also chosen to referee third-place playoff at the 2016 AFC Referee of the Year built his reputation and officiated in the 2015 FIFA Club World Cup and the 2016 Olympic Football Tournament.

Iran national football team coach Mehran Shahintab said that the friendly match against Uzbekistan helped them to identify their weak spots.

"Two teams showed a good football. In the first half we were in the same level. Our players made many mistakes in the second half and we conceded a goal. I hope we will have a better performance in the next match," Majidi said.

Majidi will be looking to make a separate competition for the remaining 12 venues, including the 2020 Tokyo Olympics.

Iran national football team coach Mehran Shahintab, who started his career in 2004 and became a FIFA referee in 2008, has officiated finals of the 2013 AFC Champions League, 2015 AFC Cup, 2015 FIFA Club World Cup and the 2016 Olympic Football Tournament.

"We didn’t have a good performance and made many mistakes in the second half," he added.

"However, they didn’t cause great danger and we were happy with the result," said Sousa, who will be looking for three points when Bahrain play Cambodia on Tuesday.

"We showed a good performance in the second half and deserved to win," he added. "We were impressive in that game."
“Eleventh Golestan” writer Behnaz Zarrabizadeh wins Eurasian Literature Award

TEHRAN — Iranian writer Behnaz Zarrabizadeh has acquired the copyright of two young adult novels “Hasti” and “Call Me Ziba” by Iranian writer Jamal Hashemi, which are among the new projects of the Writers Publishing House.

Zarrabizadeh, who was born in 1967 in Tehran, is the daughter of famous Iranian author Mohammad Zarrabizadeh.

The writer has been nominated for the 2019 Astrid Lindgren Medal, which is given to one of Iran’s best writers. The award is dedicated to the best literary work, documentary and best journalist.

Zarrabizadeh wrote the book based on her interviews with Mohammadi. She passed away in 2009 months after the beginning of a struggling life, has also clearly expressed her honesty in her innocent narratives, she added.

The Eurasian Literature Award was established by Kazakhstan, Russia, Iran, Belarus and several other countries.

“Gold Carrier”, also known as “Gold Runner”, by Iranian filmmaker Mohsen Faddini, which was produced in cooperation with the Ministry of Culture and Islamic Guidance, has acquired the copyrights to two young adult novels “Hasti” and “Call Me Ziba” by Iranian writer Jamal Hashemi, which are among the new projects of the Writers Publishing House.
