The death of Netzahuy’s political career

The Zionist regime’s Prime Minis- ter Benjamin Netanyahu on Monday evening formally announced he had failed to form a new government, and therefore returned the mandate to carry out this job to Israeli President Reuven Rivlin. Subsequently, Rivlin said that he would charge Blue and White Party leader Benny Gantz with the task of forming a new government within a few weeks. Arab Israeli lawmakers have pledged to back Gantz, though he still needs more than ten seats for the job. Forming a government requires 61 seats in parliament. Rivlin has said he will try to avoid another election, while two elections have been held in Israel this year. The right-wing Likud Party won 36 seats and the centrist Blue and White Party 33 on the Sept. 17 election. Before the election, Gantz had claimed that he aims to oust Netanyahu by forming a new government.

The recent developments can be con- sidered as the end of Netanyahu’s political career, since he personally announced his failure. Also, given that other Zionist regime’s parties are reluctant to cooperate with Ne- ztahuy, he has little chance to have a role in the future cabinet, according to a source.

The countdown to end up in the ash heap of history

Netanyahu faces four serious financial and corruption cases. He has so far re- sponded to the trial and implementation of verdicts, but following his withdrawal from the cabinet, the Zionist regime’s court system can easily bring him to trial. In September, Israel’s Channel 13 re- ported that Netanyahu is seeking to leave political life on condition that he is acquitted of charges. Earlier, Israel’s Attorney General Avichai Mandelblit had said that Netanyahu had been charged with breachng rules. Netanyahu is being tried to acquit him of charges on exchange for abolition from politics.
Iran welcomes maintaining Syria's territorial integrity

**POLITICAL**
**TEHRAN** – An unmanned aerial vehicle (UAV) and its passenger were shot down by the Islamic Revolution Guards Corps (IRGC) Aerospace Force, made an emergency landing in the British embassy in Tehran on Wednesday.

According to the Press TV News Agency (FNA), the drone was under the command of the IRGC’s elite. It had been shot down near Shooshieh tower, in the village of the British embassy, in Tehran. The source also added that the drone was targeted by the Iran's Revolutionary Guard while it was flying over the British embassy.

The IRGC’s aerospace force confirmed that the drone had been shot down by its troops.

The incident comes amid heightened tensions between Iran and the U.S. after the U.S. military killed Iranian Revolutionary Guard air defence forces' top commander Qassem Soleimani in a strike in Iraq.

The U.S. has accused Iran of being involved in a plot to kill President Donald Trump, which was revealed by the U.S. as part of the diplomatic talks to resolve the Iran nuclear deal.

The deal, brokered by the U.S. and the U.K., was designed to prevent Iran from pursuing nuclear weapons and to limit its nuclear enrichment activities.

The deal also includes commitments from Iran to the International Atomic Energy Agency (IAEA), which monitors Iran’s nuclear activities and ensures that they are peaceful.

The deal has received widespread international support, with many governments and organizations expressing their support for the agreement.

The Iranian government has also said that it will continue to abide by the terms of the nuclear deal, as long as the U.S. does not impose new sanctions on Iran.

The Iranian government has also repeatedly called for the U.S. to lift its sanctions on Iran, which have severely impacted the country’s economy.

The U.S. has also imposed new sanctions on Iran, targeting its oil exports and financial transactions with other countries.

The U.S. has also threatened to impose further sanctions on Iran, if it does not comply with the terms of the nuclear deal.

The U.S. has also imposed new sanctions on Iran, targeting its oil exports and financial transactions with other countries.

Informed about all affairs, including talks passed in the meeting of heads of government of the FATF-related bills, the government will consider national interests when examining the bills, the body said in a statement on Wednesday, ISNA reported.

It also said Leader of the Islamic Revolution Ayatollah Ali Khamenei has not made any written or oral remarks to show his approval of the FATF-related bills.

It is expected that governmental authorities will avoid making any remarks about the Leader in the talks, it added Michael Reese, the secretary of the council, had said earlier in a tweet on Wednesday.

On Tuesday, President Jahangiri urged the Expediency Council to ratify the FATF-related bills, which have been sent to the Expediency Council for ratification.

“Given that the FATF and CFT bills were passed by the Parliament, the Expediency Council branch and also confirmedly by the Supreme Leader, the Expediency Council body said to better ratify these bills,” he suggested.

“It would be better if the people were informed about all affairs, including talk about the FATF-related bills as soon as possible. Iran is a final deadline of February 2020 to take all the necessary steps to comply with the FATF’s rules and other remaining bilateral standards, or otherwise, there will be no logical justification in the country,” the president noted.

“The Parked Financial Action Task Force (PFTF) said on Friday it had given its final decision about ratifying the Palermo and Terrorism Financing Conventions. When the President approves the FATF, then the FATF will fully lift the suspension of our country’s sanctions and also lift all the sanctions and urge all jurisdictions to apply effective countermeasures, in line with recommendation 19 of the FATF said in a statement, according to Reuters.

“The FATF expects Iran to proceed swiftly in the reform path in order to make it address all of the remaining documents by completing and implementing the necessary Anti-Money Laundering (AML) and its countermeasures reforms.”

“The other action is to ratify the CFT, the Palermo Convention and the new FATF,” the statement said.

On October 25, the parliament voted on the FATF-related bill. In a related bill, the Expediency Council rejected the bill by finding 22 faults with it, which put the fate of the bill on the hands of the Expediency Council.

“The MP further said, ‘The point is here, when the U.S. overthrows the Islamic Republic system, by the JCPOA, it is not at all convenient to talk about the FATF or ratifying Palermo bill will benefit us.’”

Russia to present own Persian Gulf security doctrine till yearend

TEHRAN — Russia Deputy Foreign Minister Mikhail Bogdanov has said that Moscow is plotting to foist its Persian Gulf security doctrine within the framework of a completely internationally-accepted document.

The Russian envoy to the United Nations, Vladimir Safronkov, said in remarks on Wednesday, Alireza Mo’ezzi, the presidential spokesman for the Islamic Republic of Iran, said there will not be any outcome for us but more imposed sanctions and other pressures.

Bogdanov said that the Russian Foreign Ministry embarked on preparing the country’s security doctrine for the Persian Gulf in June, adding, “One of the suggested policies stipulated in the doctrine is that the Islamic Republic should not be involved in any regional military base in the region.”

Bogdanov went on to say that the draft document has been developed and that it should be officially announced not later than this year.

In remarks on Wednesday, Alireza Mo’ezzi, the presidential spokesman for the Islamic Republic of Iran, said that the Islamic Republic should not be involved in any regional military base in the region.

He added that international observers have been looking at the phenomenon of exporting their crude to the Persian Gulf.

The Chinese envoy added, “The region is very important and our government is very concerned to return to,” he added.

He also pointed to the problem of Tehran and Riyadh, saying Iran and Saudi Arabia are neighbors and that they should have a peaceful relationship.

Emphasizing that Tehran will continue its support for the countries in the region, he said, “Iraq, Yemen, and Iran will certainly emerge victorious and security will return to the region.”

The top adviser pointed out that the Resistance Front will have the upper hand in the balance of power in the Middle East.

Zahid, for his part, said that Tehran views its ties with Beijing as strategic.

Referring to President Hassan Rouhani’s plan for promoting peace in the Persian Gulf through his Hormus Peace Endeavor (HOPE) initiative, the foreign minister welcomed China’s willingness to contribute to peace and stability in the region.

President Rouhani presented the HOPE initiative while delivering a speech at the UN General Assembly in New York on September 25, inviting all regional countries to join it.

Most members of Zam network already identified: IRGC

TEHRAN — Brigadier General Ramazan Sharif, the spokesman for the Islamic Revolution Guards Corps (IRGC) revealed that most of members of Zam’s network have been identified.

The IRGC announced on October 14 that it has served a warrant on Mohammad Zam, the head of an anti-Iran website and Telegram channel, during a search operation, which involved lure him back to Iran.

The Islamic Revolutionary Guard Corps head of Amir News in 2017, Shahr said Mehr reported.

“Given the process of intelligence monitoring and controlling of this mercenary element for a long time, most members of Zam’s network have been identified and there is relatively certain access to domestic elements helping this anti-Iranian mechanism as well. The identification of Zam’s network has been possible due to their unlawful actions.”

“They claimed that the FATF’s regulations were preventing them from complying with their Obligations’,” the MP further said. “The point is here, when the U.S. overthrows the Islamic Republic system, it is not at all convenient to talk about the FATF or ratifying Palermo bill will benefit us.”
Iranian Industry, Mining and Trade Minister Reza Rahmani said on Wednesday that domestic manufacturing of auto parts is going to lead to a decrease in the prices of cars in Iran.

"Currently, our most important program is to manufacture domestic auto parts and improve domestic production," he told IRNA.

He also noted that the country’s auto makers are going to manufacture more parts so that by the beginning of the next year, they will be able to lower prices, Rahmani told IRNA.

According to the head of Khuzestan Province’s Ports and Maritime Department, Iran which stood at the 13th place in 2017 could lag behind among the 10 largest steel producers in 2018.

Iranian steel producers have also faced a lot of costs due to the sanctions by the U.S.

"Sanctions are the main problem for the Iranian steel industry," the official said.

"The cost of producing steel in Iran is about 90% higher than the world's steel market prices," he said.

"By the present sanctions, the cost of steel production is doubled."

Iran’s steel production has taken a hit in January-October period, according to the Central Bank of Iran (CBI).

"Steel output in January-October was 38.4 million tons, which is about 4% lower than the result of the same period of last year."
NIOC to ensure participation of private sector in studying exploration blocks

**ENERGY**

The director of the National Iranian Oil Company (NIOC)’s Discoveries Department has stressed the need for exploration projects to ensure the participation of the private sector in the discovery and study of the discovered blocks across the country.

“The Oil Ministry and NIOC have taken new steps to pave the way for the presence of domestic companies in the exploration sector,” Saleh Hanif said on Tuesday in the signing ceremony of a memorandum of understanding for development studies on Bamdek block in the Persian Gulf.

Iranian companies have been able to participate in the exploration process and offer acceptable performance in terms of utilizing qualified human resources and being equipped with the necessary knowledge and technology.

The official stated that in the past all the exploration and development studies were carried out by foreign companies, and they have now achieved good results in the country’s oil and gas blocks.

Oil dips as U.S. stocks rise; prospect of OPEC action supports

By Alex Kimoni

China’s surging appetite for LNG looks set to slow markedly next year as the government concentrates on diversifying sources of gas supply, the Eurasia Group has said in its new year outlook.

China’s surging appetite for LNG looks set to slow markedly next year as the government concentrates on diversifying sources of gas supply, the Eurasia Group has said in its new year outlook.

“With domestic output potentially rising 20 bcm and pipeline supply potentially growing by 10 bcm, China’s LNG import boom may plateau,” the report said.

China’s domestic production has been rising—6% per annum in recent years, despite challenges with reserves in difficult locations. The forecast comes from the International Energy Agency that China’s domestic production would climb 20% annually through 2024 to 4.1 bcm.

China has also been improving existing connections with central Asia this year, making full use of a pipeline to China that will launch a new natural gas pipeline from the Power of Siberia pipeline in December. These could replace supplies under the old sitcom in 2030.

“We will be watching closely how China’s imports develop,” said Geisthoien, China’s domestic production has been rising—6% per annum in recent years, despite challenges with reserves in difficult locations. The forecast comes from the International Energy Agency that China’s domestic production would climb 20% annually through 2024 to 4.1 bcm.

“The world’s largest economies and biggest oil consumers, China and the United States, the world’s two largest economies and biggest oil consumers, will be the drivers for oil, gas, and, to a lesser extent, for coal,” said Novak.

It will be a struggle to get members to cut production significantly more, particularly if you have some countries with net pea...
A right balance between order and diplomacy

GLOBALEME – The US has begun requiring Chinese diplomats to post on their social media accounts in rapid succession in order to teach educational institutions and official visits to research institutions. The incident comes after a US ambassador to the United Nations said on Monday that Washington is considering additional rules for employees of the Chinese embassy in the US.

The US government said that employees of the Chinese embassy in the US have been asked to provide regular social media updates, including posts on popular platforms like WeChat and Twitter. The government said this was part of a broader effort to ensure transparency and accountability.

The US government said that the employees of the Chinese embassy have been asked to provide regular social media updates, including posts on popular platforms like WeChat and Twitter. The government said this was part of a broader effort to ensure transparency and accountability.

However, there is a difference in the governance in the US and China. The US government has long been concerned about the export of sensitive technologies to China, and has imposed strict controls on the sale of advanced semiconductor chips to China.

China, on the other hand, is more concerned about the import of technologies from the US, and has imposed strict controls on the sale of advanced semiconductor chips to the US.

A recent report from the US government showed that China has increased its purchases of advanced semiconductor chips from the US, which has caused concern in the US.

Overall, China and the US are facing increasing geopolitical tension, and both countries are taking steps to ensure that they can protect their interests.

Meaningful polls against Trump

By Saeed Sobhani

TEHRAN – Recent polls in the United States indicate that there are a sharp increase in opposition to President Trump. In such a situation, we are experiencing tough times for US-Persian relations. We know very well that, given the current trend, we will not stand a chance of winning next year’s presidential election.

Support for impeaching Trump grows among independents: Reuters/IPSOS poll

As Reuters reported, Support for impeaching US President Donald Trump surged amid political independents and rose by three percentage points overall since last week, according to a Reuters/IPSOS poll released on Tuesday. The poll shows a deepening Republican uprising against Trump, who said he was the “most vulnerable President in history”.

Support for impeachment and removal is strongest among white men without college degrees, according to a recent poll by the New York Times.

Support for impeachment also grows among women, according to a recent poll by the Washington Post.

The poll found that nearly three-quarters of adults said they would support impeachment and removal of Trump.

Overall, 51% say that Trump should be impeached and removed, compared to 45% who said they would support his removal in a December poll.

The poll also shows that support for impeachment and removal has increased among all age groups, with the exception of those aged 18 to 29, who remain divided.

In the six closest states carried by the president in 2016, 62% support impeachment and removal, according to a new POLITICAL/Morning Consult poll that shows the presidency on track for multiple influential positions.

The poll also shows that Trump’s approval rating is down 10 points in the last week, with 41% of Americans saying they approve of his job performance.

Poll: Little backing for Trump’s Syria withdrawal

But two in three voters say the US is engaged in too many foreign conflicts.

A new poll conducted by the Center for Strategic and International Studies (CSIS) found that 62% of voters said they approve of US troops remaining in Syria, while 38% said they disapprove.

The poll also found that 62% of voters said they believe the US should withdraw troops from Syria, while 38% said they disapprove.

Opinions of Trump’s handling of foreign policy are mixed, with 49% saying they approve of his handling of foreign policy and 40% saying they disapprove.

The poll also found that 56% of voters said they believe the US should withdraw troops from Syria, while 44% said they disapprove.

The poll also found that 56% of voters said they believe the US should withdraw troops from Syria, while 44% said they disapprove.

The poll also found that 56% of voters said they believe the US should withdraw troops from Syria, while 44% said they disapprove.
I was deeply shaken while witnessing yesterday’s event in Westminster Magistrates Court. Every defendant was, first and foremost, a human being. Some stood tall, others slouched. Some were exuding confidence, others were hesitant. The noise, the babbling, the coughing, the sneezing, the breathing—each sound contributing to the cacophony of voices competing to be heard.

I tear up at the blatant lack of fair process, the first thing I must note was Julian’s condition. I had barely heard him as he had only just entered the room and his hair was disheveled and his face showed the signs of great suffering. He is in pain and trying to do so, but to do so in a way that is not an infringement of the law. Until yesterday I had always been skeptical of those who claimed that Julian’s treatment was not as bad as it seemed. But Baraitser’s verdict was not just prepared but eager to see the extradition treaty applied at all. I have never seen before. Since his arrest he has lost over 15 kg in weight.

In court, the defense team explained that the Spanish legal process was a sham. There is no possibility of a fair trial under Spanish law, and the defense argued that the extradition treaty does not apply. There was no evidence to support the extradition treaty applied at all. I have never seen before. Since his arrest he has lost over 15 kg in weight.

Julian’s treatment was not as shocking as it was his mental deterioration. When asked to give his name and address, he said something incomprehensible, suggesting comparing seconds to recall. Both will come in the important context of his statement at the end of the proceedings in the extradition hearings, but to do so in a way that is not an infringement of the law. Until yesterday I had always been skeptical of those who claimed that Julian’s treatment was not as bad as it seemed. But Baraitser’s verdict was not just prepared but eager to see the extradition treaty applied at all. I have never seen before. Since his arrest he has lost over 15 kg in weight.

I have known Julian for many years, and I have been following his case closely. I have seen him as he was the first to be arrested in the United States for the Assange extradition hearings. I have always been concerned about the treatment of Julian in court and the way he was treated by the judge.

I was shocked by the judge’s treatment of Julian. It was very plain that there was no genuine process of understanding. The whole experience was profoundly upsetting. It was very plain that there was no genuine process of understanding. The whole experience was profoundly upsetting.

After the recess the defense team stated they could not proceed, in their professional opinion. The judge cut them off abruptly, and the extradition hearing was adjourned. The defense team was not allowed to present any evidence or arguments. The judge’s decision was made after a cursory examination of the evidence submitted by the defense. The defense team was not given the opportunity to present their case and the judge did not consider the evidence presented. The defense team was denied the opportunity to present any evidence or arguments.

Baraitser dismissed the defense’s request for a separate penalty hearing to consider whether the charge is a political offense. The defense argued that Julian’s treatment was not as bad as it seemed. But Baraitser’s verdict was not just prepared but eager to see the extradition treaty applied at all. I have never seen before. Since his arrest he has lost over 15 kg in weight.

The whole experience was profoundly upsetting. It was very plain that there was no genuine process of understanding. The whole experience was profoundly upsetting.

What happened next was very instructive. There was no genuine process of understanding. The whole experience was profoundly upsetting.

The defense team was not allowed to present any evidence or arguments. The judge’s decision was made after a cursory examination of the evidence submitted by the defense. The defense team was denied the opportunity to present any evidence or arguments.

Bezos’s Blue Origin partners with Lockheed, others on Moon lander

By Brian Koberlein

The universe bathes in a sea of light, from the blue-white flickering of young stars to the deep red glow of hydrogen clouds. Beyond our own galaxy, the Milky Way, the universe is a sea of light, with colors seen and unseen, ancient and new. But of all these, the color of the first color of the universe was the one that appeared before all the others, the first color of the universe.

The universe began 13.8 billion years ago with the Big Bang. In that earliest moment, it was so hot and dense it wouldn’t have been able to form anything. The Big Bang is often visualized as a brilliant flash of light (an explosion of energy) of all colors. But that isn’t an accurate picture. The Big Bang didn’t explode into empty space. The Big Bang was on expanding space filled with energy.

At first, temperatures were so high that light didn’t exist. The universe had no means of emitting light. Later, as the universe cooled, the first light was produced. The first light to be produced was the color “cosmic latte.”

By chance, astronomer Christina Williams spotted a faint galaxy 12.5 billion years ago. This means the light took that long to travel from the galaxy to here. This light means that it was probably really far away and hidden in between to suggest formation.

“Given that they discovered one instance of a galaxy like this, it will lead to the discovery of others. It was a lucky find or it may be one of many discovered,” said Williams.

“Such hidden monster galaxies have previously the right ingredients to be that missing link because they are probably a lot more massive and very distant,” said Williams.

Given that they discovered one instance of a galaxy like this, it will lead to the discovery of others. It was a lucky find or it may be one of many discovered.

“Such people have more galaxies hidden in this way. They are a lot more probable candidates to be that missing link because they are probably a lot more massive and very distant.”

The color of the universe was the one that appeared before all the others, the first color of the universe.

What was the first color in the universe?

By Brian Koberlein

The universe bathes in a sea of light, from the blue-white flickering of young stars to the deep red glow of hydrogen clouds. Beyond our own galaxy, the Milky Way, the universe is a sea of light, with colors seen and unseen, ancient and new. But of all these, the color of the first color of the universe was the one that appeared before all the others, the first color of the universe.

The universe began 13.8 billion years ago with the Big Bang. In that earliest moment, it was so hot and dense it wouldn’t have been able to form anything. The Big Bang is often visualized as a brilliant flash of light (an explosion of energy) of all colors. But that isn’t an accurate picture. The Big Bang didn’t explode into empty space. The Big Bang was on expanding space filled with energy.

At first, temperatures were so high that light didn’t exist. The universe had no means of emitting light. Later, as the universe cooled, the first light was produced. The first light to be produced was the color “cosmic latte.”

By chance, astronomer Christina Williams spotted a faint galaxy 12.5 billion years ago. This means the light took that long to travel from the galaxy to here. This light means that it was probably really far away and hidden in between to suggest formation.

“Given that they discovered one instance of a galaxy like this, it will lead to the discovery of others. It was a lucky find or it may be one of many discovered,” said Williams.

“Such hidden monster galaxies have previously the right ingredients to be that missing link because they are probably a lot more massive and very distant,” said Williams.

Given that they discovered one instance of a galaxy like this, it will lead to the discovery of others. It was a lucky find or it may be one of many discovered. This is what we now see as the cosmic microwave background—the glow of light from a time when the universe could barely be seen. Over billions of years, the glow has cooled to the point that it is about 2.7 degrees above absolute zero.

When it first appeared, the universe was much warmer, about 3,000 Kelvins. The early universe was filled with a bright warm glow.

We are a good idea of what that first color was. The early universe had an almost even temperature throughout, and it had a light of about the same temperature. The glow would have come from the light of electrons and nuclei cooled enough to bind. It took a long time for the light to cool down to a point where we could see it.

By the way, the observable universe was a transparent cosmic microwave background and could be seen across the sky. All of the photos formed in the Big Bang were finally free to stream through space as it expanded and cooled.

This is what we now see as the cosmic microwave background—the glow of light from a time when the universe could barely be seen. Over billions of years, the glow has cooled to the point that it is about 2.7 degrees above absolute zero.

When it first appeared, the universe was much warmer, about 3,000 Kelvins. The early universe was filled with a bright warm glow.

We are a good idea of what that first color was. The early universe had an almost even temperature throughout, and it had a light of about the same temperature. The glow would have come from the light of electrons and nuclei cooled enough to bind. It took a long time for the light to cool down to a point where we could see it.

By the way, the observable universe was a transparent cosmic microwave background and could be seen across the sky. All of the photos formed in the Big Bang were finally free to stream through space as it expanded and cooled.

Over-crowded tourist destinations are changing the way we travel

Paphos archaeological park

Paphos, situated in the district of Paphos in western Cyprus, is a serial archaeological property consisting of three archaeological sites: the Tombs of the Kings (Site I), and the village of Kouklia (Site II). The site is situated in the district of Paphos in western Cyprus.

The village of Kouklia includes the remains of the Temple of Apollo and the Palmyros (Old Paphos). Because of their great antiquity, and because of their particular importance as the cult and legend of Aphrodite (Venus), who under the influence of the Phoenicians and the Romans is personified as the goddess of beauty and love, inspiring writers, poets, and artists throughout human history. The village has two cisterns and is considered to be of outstanding universal value.

Paphos, which was declared a UNESCO World Heritage Site in 1980, was once the most important city-state of the Mediterranean Sea. Paphos is also known as the birthplace of the goddess Aphrodite, whose cult was popular throughout the Roman Empire. Paphos is a popular tourist destination in the Mediterranean Sea and is a major port of call for cruise ships.

The city of Paphos was declared a World Heritage Site by UNESCO in 1980. Paphos is known for its beautiful beaches and crystal-clear waters, attracting tourists from all over the world. The city is also home to a number of historical sites, including the Tombs of the Kings, which are the final resting place of the kings of the Paphos dynasty.

The Tombs of the Kings are a series of 13 tombs, which were built between the 4th century BC and the 1st century AD. The tombs are located on the outskirts of the city of Paphos and are made of white limestone. The tombs are decorated with exquisite mosaics, which depict scenes from ancient Greek mythology, including the story of Jonah and the whale.

The Tombs of the Kings are open to the public and are a popular tourist attraction. Visitors can explore the tombs and admire the beautiful mosaics, which are considered to be some of the finest examples of ancient Greek art.

The Tombs of the Kings are also an important site for archaeological research. A number of important discoveries have been made at the tombs, including a number of mummies and artifacts, which provide valuable insights into ancient Egyptian, Greek, and Roman culture.

The Tombs of the Kings are an important site for the study of ancient Egyptian, Greek, and Roman culture. The mosaics and artifacts found at the tombs provide valuable insights into the lives of the people who lived in ancient Egypt, Greece, and Rome.

Turkey: No country for Kurdish newspapers

By Tom Stevenson and Murat Bayram

TEEJAN - The first official presence of Iranian women in football stadiums earlier this year resulted in the closure of the most popular Kurdish-language paper in Turkey, as its staff were no longer able to return to print.

Earlier this year, Iran left a ban on women entering soccer stadiums. The 2018 World Cup qualifier between Iran and Argentina took place in Tehran on 14 June. The stadium was lined up with the entire nation for a showdown between the two teams, and the Iranian women were allowed to enter the stadium for the first time in history.

The match was the first women could watch, and more than 30,000 tickets were sold, confirming that Iranian women had increasingly become a part of the soccer culture. However, the story was not quite as it seemed. In the last few years, the regime has been struggling to contain the growing demands of the women's rights movement, and the move was seen as a calculated attempt to gain favor with the international community.

Pro-Kurdish Democratic Party (PDP) and the Kurdish Workers’ Party (PKK) are the most prominent Kurdish groups in Turkey, and the two organizations have been at odds with the Turkish government for decades. However, the latest report shows that the two parties are working together to reach an agreement on how to best represent the interests of the Kurdish community.

Pro-Kurdish Democratic Party deputy directors held a press conference in Ankara on 26 November, 2018, to announce that they had reached an agreement with the Kurdish Workers’ Party. The agreement covers a range of issues, including the status of the Kurdish language and culture, the role of the government in supporting the Kurdish language and culture, and the role of the media in promoting the Kurdish language and culture.

The agreement is the result of a series of meetings between the two parties over the past few months. The parties have been working together to find a way to resolve the many issues that have divided them in the past.

The agreement is expected to have a positive impact on the Kurdish community in Turkey. It is hoped that it will lead to a more peaceful and prosperous future for the Kurds in Turkey.
First 100% electric black cab for 120 years launches in London

The launch of a fully electric black cab for London has been heralded as the first step towards solving pollution crisis for the capital’s air.

The Dynamo, a taxi converted from a Nissan electric van in a Coventry factory, is the first 100% electric taxi on the streets of London since 1899. Its predecessor, the Boney, failed to take off at a time when most cars were horse-drawn.

“Electric vehicle technology has advanced so much that today’s electric vehicles – both zero-emissions capable – can be leased with new Transport for London (TfL) taxi licensees. A full electric taxi cab made by the Lemforder Electric Vehicle Company (LEVC) have been licensed for operation for the first time in its history in June 2018. The LEVC model runs on a battery and is capable of speeds up to around 70 miles, with a petrol option available but only for small, local journeys.

The mayor of London, Sadiq Khan, said he was delighted as taxi-drivers switch to clean engines. “This is an important step towards improving London’s air quality.”

Most of the 200,000 licensed black cabs in the capital are diesel.

“Working with TfL, the government and industry, we hope that this is just the start of a wider change in London’s transport sector,” he added.

A scheme on renovation of clunker taxis started in the Iranian calendar year 1395 (March 2016–March 2017), through which 90,000 new cabs would have replaced the old ones.

This year, however, regarding economic conditions and sanctions, car prices have increased. This issue has led to a halt to the renovation scheme, just a year before the end of the year.

Referring to the taxi fleet as a public transport system provided people with cheap and high quality service, he said: “If we want people to use less personal cars, we need to provide them with an efficient, cheap and high quality fleet.”

He further stated that last year, only 60 taxis have replaced the clunker ones operating in the capital’s public transport fleet.

**Tuberculosis treatment completely free of charge in Iran**

The number of TB cases occurring each year (and thus the number of TB-related deaths annually) has been declining in recent years due to increasing prevalence of health-related risk factors for TB (e.g., smoking, diabetes and HIV infection). However, providing preventive treatment to people with a latent TB in- fection and treatment for active cases on broader determinants of TB infection and disease will be an ongoing challenge.

On Tuesday, according to World Health Organization, an estimated 10.0 million (range: 9.0–11.1 million) people fell ill with TB in 2018, a number that has been relatively stable in recent years. The burden of disease varies significantly among countries, from fewer than five to more than 300 new cases per 100,000 people per year, with the global average being around 130.

The Global Fund to fight TB, HIV and malaria reported on Wednesday.

“The total number of new cases in all age groups but the highest burden is in men (aged >35 years), who account for 54% of all TB cases in 2018. By comparison, women accounted for 46% of the cases and children (aged <15 years) for 10%,” the report said.

Currently, 4.2 million unclassified clinical TB cases are behind bars in Tehran, the report added.

**Non-repayable loans for e-bikes must increase: Tehran City Council chairman**

While an important strategy to contain Tehran’s air pollution is using clean-energy power, the city council chairman must take advantage of the opportunity presented by the Green Wave program to incentivize the owners to replace their motorcycles with electric ones is not sufficient and must increase, Mohammad Hasan Aqaei, deputy mayor of Tehran for traffic and transport affairs, said.

A scheme on renovation of clunker taxis started in the Iranian calendar year 1395 (March 2016–March 2017), through which 90,000 new cabs would have replaced the old ones.

“The problem is in part an extended appeal for the public transportation system, and the whole country’s public transport fleet by the end of the current Iranian calendar year (March 2020). Mehr reported on Wednesday.

Non-repayable loans for e-bikes must increase: Tehran City Council chairman

**Words in the News**

State of the Union address

(February 04, 2020)

President Bush: «I will not stand by and watch the plight of those who believe in freedom dwindle: homeland security: the price of indifference: the cost of not taking an interest in events: do nothing until something happens: stand by: if you stand by and let something bad happen, you do nothing to stop it happening: homeland security: precautions to protect the USA: défendre: if nothing happens, it becomes smaller or less strong: request: the minibus to the city:

Pointing to the role of vans in passenger transportation in the metropolis of Tehran, he highlighted that today, vans do not meet the capital’s passenger popula- tion: and vans can come efficient: Using vans in the capital’s fleet would be a step in the right direction, he said, concluding: “We hope that with the help of car manufacturing companies, we will solve the problem of public transportation in the city.”

Morena Zameni, director general of urban taxi fleet, said in August that there are currently 150,000 clunker taxis in the country, which will reach up to 200,000 by the end of the year.

The number of old taxis is expected to reach 240,000 by the next years, which constitutes 75 percent of the country’s total taxi fleet, he lamented.

The United States of America will not permit the world›s leading cause of death from a single cause: the number of TB deaths: can also be driven down by re- "Tom is browned off with his job."
‘Taking legal action’: Iraq pleads with UN to kick unauthorized U.S. forces out of country

This is a photograph of the front page of the Globe and Mail, October 24, 2019, featuring an article titled “U.S. envoy says Trump witheld Ukraine aid over investigation”. The article discusses a claim that President Donald Trump withheld military aid to Ukraine in order to investigate the Ukrainian president, Volodymyr Zelenskiy, and his possible interference in the 2020 U.S. presidential election. The article also mentions that the U.S. Congress is expected to launch a formal impeachment inquiry against Trump. The article is set against the backdrop of improve U.S.-Ukraine relations, the Trump administration’s efforts to buttress Ukraine’s stability and democracy, and the ongoing political crisis in Ukraine. The article highlights the importance of the issue and its potential impact on the region and the world. The article is written in a readable and informative style, with a focus on the facts and evidence presented in the article. The article is part of a larger investigation into the Trump administration’s actions and their implications for U.S.-Ukraine relations and the global political landscape. The article is an important source of information for anyone interested in the U.S.-Ukraine relationship and the broader political landscape. The article is written in English, and is intended for a general audience. Leonard shines in debut as Clippers beat Lakers in season opener

Kawhi Leonard made his Los Angeles debut a successful one on Tuesday as the Clippers stunned the defending champions Los Angeles Lakers. The Clippers 125-122 to get to the 2020-21 campaign off to a winning start.

Leonard, who was a free agent signing in action, leading the way in the season-opener with his new team after putting the Toronto Raptors in their first NBA title last year.

“It was great. Lot of emotions, one game,” said Leonard, who grew up in Riverside, 50 miles east of Los Angeles.

“I am just happy we came out and got a victory. We had great practices and had some carry over from that today.”

The Clippers tied the run in the first, saw their defense to take a 31-point lead at the half and went on to win by 15 minutes to allow groundsmen to clear the pitch of snow before the start.

“Tears were running down my face,” said guard Ben Simmons, who added six rebounds and five assists, reserve guard Mike Scott finished with 10 points and seven rebounds.

Leonard shot 4-of-13 from three, 8-of-24 from the floor and a 4-of-4 for 25 points for the Lakers who are looking for their fifth consecutive loss before the team’s two-game trip to the West Coast. The Lakers find themselves still playing for a season’s record.

“On sprinting” TV networks has given the inside to what theClipper’s defense star star O’Neal said he did right to boost temp for the Los Angeles pro-demonstrators against-earlier that month.

“I get money for it,” he said. “We are playing for ourselves, for the fans and everybody.”

The Lakers guard who left the court for the season last month, said

“We are American people; we can do a lot of business in China,” O’Neal said.

“We did all the best we could, we understood our values, and we understand their values. We did all our best values in America in free speech.

“Of course we want what we say and we’re allowed to speak up about injustices, and that’s just how it goes.”

Bayern Munich fans injured in clashes at youth game in Athens

Athletic Bavarian Munich supporters were injured during clashes with people who stormed the pitch during a youth game in Athens on Tuesday.

The UEFA Youth League game between Bayern Munich and Olympiakos was halted at the 68th minute, after a group of about 60 people invaded the pitch and stopped the match. The police stormed the pitch and attacked the fans in the stadium.

The match was suspended, but with just two months left in 2019, the defender could be out for the remainder of the year.

Bayern Munich’s defensive crisis went from bad to worse on Tuesday night as record signing Lucas Hernandez suffered a partial ligament tear in his right ankle in the 3-2 win at Olympiacos.

The French defender is set to miss several weeks of action following the diagnosis and his injury comes just days after defender Niklas Sule suffered a partial-season-ending anterior cruciate ligament tear in his left knee. Bayern have already lost two proven centre-backs in their squad.

Neymar missed half of PSG games since move to France

Neymar did not play in Paris Saint-Germain’s Champions League clash with Club Brugge, missing his half of matches through injury or suspension since his world record 222 million move from Barcelona in 2017.

His international injury was followed by a one-match ban following the dismissal in September which saw him sent off against Atalanta.

PSG boss Amiens is 22 in the opening round of Ligue 1 features in this week’s transfer news. The Parisian club, who is still looking for a new manager, his registration was not completed in time for him to play.

Also, coach Thomas Tuchel said ahead of this season’s 4-0 home win over Toulouse and a 2-0 away victory over Metz towards the end of August that Neymar was fit enough to play but would not feature in his future was then not clear.

Neymar’s two main spells out of action both came in winter, with a one-match ban following the dismissal in September which saw him sent off against Atalanta.

“Neymar missed the clash in Belgium with BT Sport.

When the match did eventually get underway, it was predictably blowtorch - two goals down from the first leg - against Real Madrid. But with Rani Lewandowski too often an isolated figure up front, Braga found it too much for Van Dijk and Laporte, and a clean sheet was the goal.

Iran Wushu Sanda team claim world title

Iran has won four gold medals at the 13th edition of the World Wushu Championships, which were held in Shenyang, China.

The Iranian team, under the leadership of Mohammad Majei, has been crowned the champions of the world in four different categories.

The Iranian Wushu Sanda team won the first gold medal in the 65kg category, with Mohammad Ali Mojiri claiming victory over his Chinese opponent.

In the 70kg and 75kg categories, Maryam Hashemi and Elaheh Mansourian respectively claimed the gold medals.

Mohamed Dhia Elaoui from Tunisia were the bronze medalists.

Iran's performance has been a testament to their dedication and hard work.

It is also a significant achievement for Iran, which is one of the countries with the largest Wushu Sanda teams in the world.

The Iranian team's success in the event will undoubtedly boost the popularity of Wushu Sanda in Iran and inspire more young people to take up the sport.

Iran has a long history of success in Wushu Sanda, and this achievement is a continuation of that legacy.

Iran's Wushu Sanda team has been preparing for this event for months, and their hard work has paid off.

The team's victory is a testament to their dedication and hard work, and it is a source of pride for all Iranians.

The Iranian Wushu Sanda team's success is a proud moment for the country and a testament to the rich history of Iranian sports.

“Exodus” wins special jury award at New Orleans filmfest

TEHRAN — Veteran Iranian director Kiarostami’s documentary “Exodus” won the special jury award at the 36th New Orleans Film Festival, the organizers announced on Thursday.

The film was competing in Documentaries Features Competition section of the festival, which ran from October 16 to 23. The film, which is based on thousands of Afghan migrants who have lived up to leave Iran as the renewed U.S. sanctions have sparked a recession. But first, they must endure interrogations at an immigration center in Tehran.

The New Orleans Film Festival is an Oscar-qualifying event in all three Academy- accredited categories of narrative shorts, documentary shorts, and animated shorts.

Paintings by Abbas Kiarostami on display at Tehran gallery

TEHRAN — A selection of films from early Iranian animation pioneers will be screened during a spate of film festivals in the Persian city of Shiraz in November.

The selection contains 14 animated films made by Jafar Kiarostami, Ali Taghi-Azar, Abbas Kiarostami, and Abdolhamid Majini, an Iranian painter and calligrapher who has won many awards without the standard theatrical run.

Clauada Castellucci to hold workshop at Kashan theater festival

Rome (Reuters) — Julia theater exponent Claudia Castellucci is scheduled to hold a workshop during the 15th Mehr Kashan National Theater Festival, which will be held in the central Iranian city from December 19 to 25.

Over 15 Iranians and five Italians from Castellucci’s theater group will attend the six-day workshop, which will be on body, action, rhythm and the effect of nature on theater-learning.

Participants will give a joint performance, which will be directed by Castellucci, during the closing day of the festival in Kashan. In addition, they will then move to Tehran stage the same performance at Mehdi Theater on December 20.

Sixty-year-old Castellucci has already held several workshops and performances in Iran.

She along with her brother Romeo and two siblings Chira and Paolo Guidi established an experiential theater company in 1983.

The company, which is named “The Theatre of Relational Sciences” and has performed in various venues across Europe, has been less enthusiastic in sending its troupe to Iran.

Despite the popularity of his work among locals and tourists, the Rome authorities threatened to ban him from historic areas and take photos with their phones.

They often fall and smash cars during performances, but they have the right features that make for perfect carving, he said. “Iran has many stumps that are waiting to be pieces of art.”

Sculptor transforms Rome’s dead tree into art

Sculptor turns Rome’s dead trees into art

Rome (Reuters) — Andrea Gandini, a 25-year-old Roman sculptor, is making a living carving wood sculptures by turning the Eternal City’s dead tree stumps into masterpieces of urban art.

Gandini, who began his tree carvings after being inspired to create beauty out of urban ugliness, has spent the last two years in the green heart of his city, carving wood sculptures out of tree stumps and other types of wood.

One of his projects involves making a sculpture out of the trunk of a tree that was cut down because it was getting in the way of the city’s road network.

The sculptures will be displayed in various locations in Rome and will be available for sale.

The sculptures, he said, are inspired by the beauty of the Eternal City’s dead tree stumps, which Gandini sees as a symbol of the city’s vitality.

“Trees are not very well considered by people, but they are very special because they have the right characteristics to make a perfect work of art,” he said.

Gandini said he hopes to sell the sculptures to collectors, galleries and museums.

“We have to show the beauty of these dead trees, which are often considered ugly, and turn them into works of art,” he said.

The sculptures, which are made from a mixture of wood and other materials, are sold for $1,000 to $5,000 each.

Disney’s Marvel to create exclusive podcasts for SiriusXM

NEW YORK (Reuters) — Walt Disney Co’s (DIS.N) Marvel Entertainment said on Tuesday it would create exclusive weekly podcasts for satellite radio company SiriusXM Holdings Inc (SIRI.O) and its online music service Pandora starting next year.

Disney’s Marvel and SiriusXM have a long history of working together, with SiriusXM having broadcast a series of Marvel-themed shows in the past.

This partnership marks the first time that Marvel will have exclusive podcasts on a platform other than its own, which includes the popular Marvel Universe Radio channel.

The podcasts will feature interviews with Marvel creators, as well as behind-the-scenes content and exclusive content from the Marvel Cinematic Universe.

“Marvel Universe Radio is a fantastic platform for fans to get the latest news and updates on their favorite Marvel stories and characters,” said Dan Buckley, president of Marvel Entertainment.

Apple Inc’s (AAPL.O) Apple Music, which is powered by SiriusXM, will also be featured in the new podcasts.

“Marvel has a huge and loyal fan base, and Apple Music is the perfect platform to reach them,” said Debra Martin Chase, head of Marvel Television.

 SiriusXM, which is controlled by media mogul John Malone’s Liberty Media Corp, has a built a name by offering more than 175 channels to car drivers, but has largely trailed Spotify and Apple in mobile and streaming content.
