Enemies terrified of Iran’s scientific progress

By Salman Ansari Javid

QOM, Iran - Iran is winning the battle of science. Iran has managed to produce scientists who can compete with the world’s scientific powerhouses. After the country’s nuclear scientist Masoud Soleimani was released from prison in 2016, scientists began to work more effectively and Iran started producing more scientific works. In 2017, the number of Iranian scientists in the world increased to 3,000, and in 2018, it reached 3,500. This number is expected to increase in the near future as the re-imposition of sanctions has forced scientists to work more efficiently.

Malaysian PM calls U.S. sanctions on Iran a ‘form of dictatorship’

By staff and agency

Malaysian Prime Minister Mahathir Mohamad has said that Washington’s sanctions against Iran are a “form of dictatorship,” adding that countries in the region cannot accept certain ideologies and to change governments. It is not only the Islamic Republic of Iran’s problem, but also that of all countries in the region. They will also suffer economically. In a way, it is a form of dictatorship, and we should inform them that this is international, he added Aljazeera in an interview published on Sunday.

He added that Malaysia lost out a lot of business under U.S. applied sanction against Iran.

He also discussed the state of the global economy and its impact on Malaysia. “The U.S. economy is affected by protests and the economy; it is international, he told Aljazeera in an interview published on Sunday.

Rouhani to attend KL Summit

By staff and agency

President Hassan Rouhani will participate in the 3rd Asian Parliamentary Assembly (APA) in Antalya, Turkey.

President of the Iranian Parliament Mohammad Ali Larijani and Omani Deputy Parliament Speaker Ali bin Nasser al Mahruqi are going to attend APA which is held for the first time in Antalya.

The Iranian president called on Saturday, Malaysian Prime Minister Mahathir Mohamad that the conference provide unique opportunities to achieve regional hegemony and that President Trump himself has acknowledged that he has been having it since at least 10 years ago.

The current proposal of Rouhani to convene the Kuala Lumpur Forum—HOPE—is a continuation of our long-standing commitment to an inclusive and cooperative regional framework for constructive interaction.

As for weapons trade, the Iranian Parliamentarians committee for foreign relations and national security submitted a bill to the parliament that enforces the Joint Comprehensive Plan of Action (JCPOA) to parliament.

Larijani told Aljazeera in an interview published on Sunday that the bill is a good idea. It’s better if we learn to cope with the sanctions first and then to participate in the implementation of the bill. But can security be purchased? Can regional stability be bought? None of us—we the global community at large—have benefited from this prevalent order of things. We cannot wait for some state, for our friends in Qatar—believe that we need a fundamental paradigm shift in our region, based on a cognitive realignment and recognition of the imperative of a regional security arrangement that is under the umbrella. This is not: new: we have been practicing this state for 40 years.

The first and most prominent cognitive disorder in the arms race is global in its impact. For far too long, the US has been the only player in the competition for arms, capacity for destruction, and even recognition of the arms race in the region are still left as a matter of concern.

The situation in Yemen is improving. Efforts to settle the conflict have been formed in the most appropriate way and under the auspices of the United Nations. Unfortunately, the Yemeni people have been victims of the conflict for the preceding five years. Unsurprisingly, the United States sold most of these lethal arms. But the real question is: have these vast U.S. arms sales to this region recovered anything even from the huge funds in the hands of the military men or the delegates, who were supposed to go to Yemen to ease the suffering of the Yemeni people. They have done no good to the region. This is a lucrative business for petrodollars, with a ceiling—it cannot be expected from a single country to change the world. The world has a common and vital interest in maintaining freedom of navigation and energy security FOR ALL.

By joining such conventions is synonymous with self-inflicted sanctions. The parliament ratified the FATF in October 2018, however the Guardian Council on a bill it is referred to the Expediency Council for final arbitration.

Talking to the Mehr news agency in an interview on Thursday, Kamal Dehghani has said that failure to join the Financial Action Task Force (FATF) will block Iran’s financial interaction with other countries.

**Quote:**"We need to move away from the failed maximum pressure strategy and adopt a pragmatic approach. This means engaging in dialogue and seeking mutually beneficial solutions." - National Interest
Domestic production of Iran passes $400m in 6 months

**ECONOMY TEHRAN** – The trade between Iran and Union countries during the last nine months of $3.9 billion, ISNA reported.

Speaking on the sidelines of the 4th International Exhibition of Transportation. Logistics and Related Services of Iran, which is being held in Tehran, CDTIC, the official of CDTIC is participating in the exhibition to materialize this/mit through contracts leading to the over 3,000 kilometers of railways and 1,200 kilometers of highways. Iran's Ministry of Transportation and Urban Development is one of the entities active in the transportation-related industries. He mentioned the exhibition is expected to have a role in materializing Iran's transport network in the coming years, and it is being showcased for the public in the pavilion of CDTIC during the exhibition.

Trade deal with China to boost global economy, says Munchin

U.S. Treasury Secretary Steve Mnuchin said Saturday a “phase one” trade deal between the United States and China was “very good” for global economic growth, and added that the second phase could come in several steps.

Munchin said the deal with China aimed to create more reciprocal trade relations for many years, adding that the deal was “very good” for global growth.

He said the United States continued to maintain the “right spot” for the global economy, adding that the United States will continue to focus on trade with China. When asked if the trade deal boosts U.S. President Donald Trump’s re-election prospects, Mnuchin said the president would be re-elected again.

"There are important issues left in 'phase two'. And perhaps that will be a 'phase two A', 'phase two B', 'phase two C', " he added.

"We will see," he said.

The Tunisian said the deal with China aimed to create more reciprocal trade relations for many years, adding that the deal was “very good” for global growth.

Wind Turbine Market to reflect impressive growth rate by 2023

The global Wind Turbine Market is estimated to reach $256 billion by 2023 and is estimated to grow at a CAGR of 7.7% during the forecast period, according to a new report by Grand View Research Inc.

The report offers an in-depth analysis of major driving factors, segments, region it is estimated to be in the market. Moreover, the report also outlines the competitive scenarios among various geographical regions along with key developments which include mergers and acquisitions, new product or service developments, R&D activities, thus giving insights to the market players about the major regions gaining activities, thus giving insights to the market players about the major regions gaining.

The report also provides a few limitations in adapting this technology, as the technology is designed for a specific set of conditions, and is equally strong in all the respective places. These limitations include the high initial cost of installation, and the risk that the technology will not perform as expected in conditions outside the installation. Due to these factors, the growth of wind turbine market is hampered.

The worldwide Wind Turbine market is estimated to reach $256 billion by 2023, reflecting a CAGR of 7.7% during the forecast period. According to the report, the growth is due to increasing awareness about the benefits of wind energy. The report also notes that the global Wind Turbine market is expected to witness significant growth due to strong government policies and initiatives in various regions across the world.

A deeper understanding of the impact of wind turbine technology on CO2 emission reduction is expected to drive the market.

The Global Wind Energy Council estimates that wind power would also influence the natural environment positively, by reducing the CO2 emissions by 1.5 billion tonnes per year. An in-depth analysis of global wind turbine market by considering adoption rate in various geographic regions, by technology, and by type of region is anticipated to grow at a CAGR of xx% during 2023.

Lethbridge will soon feature Canada’s largest scale model of the solar system

The Lethbridge Astronomy Society hopes to have the solar system installation in place by the end of next summer. The project has been in the works for several years, and the society has been raising funds to make it a reality. The installation will feature a scale model of the solar system, with each planet represented by a sculpture in its correct orbit around the sun. The society plans to have the installation ready for the summer of 2024, and is currently working on finalizing the design and securing funding to complete the project.

Venezuela increases oil output amid drive to keep world inventories low

The Organization of Petroleum Exporting Countries (OPEC) on Wednesday announced that oil pumping in Venezuela in July decreased by 50,000 bpd, which is a significant decrease in production that may have a positive impact on the global oil market, especially in an attempt to keep inventories at a level that holds profit margins attractive.

OPEC has also reported a gradual recovery in Venezuela’s oil production in the past months, which could be a result of the many economic sanctions imposed by the United States against the country. The sanctions are expected to continue, which means that the imposition of sanctions on Venezuela is also an imposition on OPEC, the other producing countries and in the world oil industry in general. Barkindo was quoted as saying by the Venezuelan media outlet TELESUR.

In spite of OPEC’s latest agreement with its allies to freeze output levels for the first half of 2020, the group is also in talks with other countries outside OPEC to further lead expectations in that direction. The group is looking at the possibility of increasing the amount of oil in storage or increasing the amount of oil in storage or increasing the amount of oil in storage.

However, the group is also looking at the possibility of increasing the amount of oil in storage or increasing the amount of oil in storage.

The whole installation

If we imagine that to be the sun, then we can calculate the distance from the earth to each of the planets, and where their orbits would be.

The whole installation

The “best years for (Venezuela) are yet to come, Venezuela has a huge one. But in terms of the Canadian company, it’s expected to generate 1.4 billion barrels.

OPEC+ Secretary General Mohammad Barkindo underlined that Venezuela's oil played a crucial role for the development of the world and insisted the economic sanctions imposed by the United States affect the well-being of the South American country.

The installation will feature a scale model of the solar system, with each planet represented by a sculpture in its correct orbit around the sun. The society plans to have the installation ready for the summer of 2024, and is currently working on finalizing the design and securing funding to complete the project.

The “best years for (Venezuela) are yet to come, Venezuela has a huge one. But in terms of the Canadian company, it’s expected to generate 1.4 billion barrels.

OPEC+ Secretary General Mohammad Barkindo underlined that Venezuela's oil played a crucial role for the development of the world and insisted the economic sanctions imposed by the United States affect the well-being of the South American country.
Bernie Sanders continues to gain momentum in the 2020 Democratic nomination race, with recent polls showing him surging to within striking distance of the frontrunner, Joe Biden. Sanders' strong performance in early contests such as Iowa, New Hampshire, and Nevada has earned him a significant lead in Super Tuesday states, and he is statistically tied with Biden in California. Despite some lukewarm endorsements from the younger faces in the Democratic Party, Sanders has remained steadfast in his support of Medicare for All while other candidates have moved away from the proposal. His consistent support for the working class and his focus on systemic change continue to resonate with voters, particularly those who are disillusioned with the political establishment. 

Sanders' message of economic justice and anti-establishment politics resonates with many younger voters who are disillusioned with the political establishment and its failure to address the needs of the working class. His emphasis on systemic change and his commitment to the working class continue to appeal to a broad base of supporters, particularly in states with large working-class populations. 

Sanders' strong performance in early contests and his continued growth in the polls has put him in a strong position to challenge Biden for the nomination. His ability to appeal to younger voters and his focus on systemic change continue to make him a formidable candidate in the race for the Democratic nomination, as he continues to build momentum in the primaries leading up to Super Tuesday and beyond.
**American rejected record in Afghan war**

**By Morteza Helali**

TEHRAN — The war in Afghanistan has become a symbol of failure for America, and American and Russian political parties in the United States are now accused of tying to pump up public opinion around the war, according to the BBC. The BBC has reported that the Afghan government has been publishing in the US media about the Afghan war. These claims have been made by several political analysts, including some who believe that George W. Bush, Obama, and Trump have made up about the Afghan war.

We have just been handed the pentagon paper of an American generation. Anticipating the US withdrawal from Afghanistan, a successful method to support the Afghan government. The Pentagon Papers of my generation. The Afghanistan Papers confirm that: The Taliban are prepared to have a ‘well-kept’ strategy with respect to Afghanistan, along the U.S. and the Afghan government over several years of talks until it has the upper hand to return to power.

The best strategy that the Afghan government published that “Obama’s strategy was also destined to fail,” as it relied on “a massive ground presence, untested by U.S. and NATO troops.” In the end, I concluded, “Obama tried to set artificial deadlines for ending the conflict, then staked out a position to do it was wait him out.”

In 2016 I wrote in a piece of truthfind that “We Have Failed Afghanistan Again and Again.”That discussion on the war has offered its share of foreign aid to Afghanistan last year — there is little for it. 40 years, we’ve spent almost $100,000 Afghan civilian and security force personnel have been killed or injured in the war. It’s not by our hands alone. By the Afghan government, that money may as well have been poured down the drain.

One senior military official told SIGAR, “We were given the task of ensuring the security of our forces in Afghanistan. We failed.” In the end, the American forces have been unable to achieve their goals.

The Pentagon Papers reveal that the United States’ war efforts in Afghanistan have been no more than a chicken-and-egg debate. A military withdrawal is likely to result in the United States’ return years later, after losing all the gains that have been made since 2001. (Witness the Islamic State’s resurgence to the Afghan troops left in 2009.)

For years, the strategy for when American forces should leave Afghanistan has been to keep the American forces in Afghanistan as long as possible. The Afghan government had been able to defend their own country could result in the US’s return years later, after losing all the gains that have been made since 2001.

We are now getting to the US military out of Afghanistan. The Afghan government has been paying attention to the need for stability and development. The Afghan government has been paying attention to the need for stability and development. The Afghan government has been paying attention to the need for stability and development. The Afghan government has been paying attention to the need for stability and development.

Many Afghan troops were seen as inept or lazy. In some cases, the American military logistics have been paid by the Afghan government. The Afghan government has been paying attention to the need for stability and development. The Afghan government has been paying attention to the need for stability and development.

Some estimates put the spending total in Afghanistan by the American military over the years as high as $1 trillion. A significant portion of this money has been spent on building and maintaining American bases in Afghanistan. These bases have been used as bases for American troops and as locations for American military personnel. At least 5,000 American bases currently exist in Afghanistan, and the cost of maintaining these bases is estimated to be over $1 billion per year.

We have to keep on trying to stop believing those lies. As president, we must always question the motives of those who are trying to deceive us. We must not be swayed by the propaganda of the American military and government officials. We must always be on the lookout for the truth and not be fooled by the lies of those who seek to deceive us.

In conclusion, the Afghanistan Papers confirm that “we have failed Afghanistan again and again.” The news is clear to those of us who have been paying attention that the US war was doomed to failure once and for all. The American military and government officials have been unable to achieve their goals. The Afghan government has been paying attention to the need for stability and development.

By understanding the lessons of the past, we can work towards a better future. We must always question the motives of those who are trying to deceive us. We must not be swayed by the propaganda of the American military and government officials. We must always be on the lookout for the truth and not be fooled by the lies of those who seek to deceive us.

Scientists found the deepest land on Earth

A new map of the mountains, valleys and canyons hidden under Antarctica's ice has revealed the deepest land on Earth, and will help boost future ice core drilling.

The frozen southern continent can look like flat and featureless from above, but beneath the ice’s blanket covered over the past 15 million years, it is teeming with terrain that can stretch as far as Texas. NASA's Juno mission revealed that Antarctica is the most geographically complex planet in the Solar System, and that the glacial ice on top of this terrain is as much as 4,200 meters (14,000 feet) thick in places.

NASA's Juno mission spotted new peaks in the ice of Venus during a close flyby of Jupiter in November.

The water lies in rock fractures accessed by drillholes and pipe in the South Africa's Western Cape region.

Two miles under a grassy plain in South Africa, pockets of water ice may have been isolated and trapped in an underground environment for billions of years.

Scientists think the pockets might have been isolated when the ground first formed billions of years ago, because early Earth's atmosphere was more water-rich than today's.

Researchers say the discovery could help reveal how life began on Earth, or similar planets. They say it could even help reveal how life began on Mars, given the presence of water on both planets.

Proton aurora form when solar wind (protons) collide with hydrogen gas in the polar regions of Mars. The protons are then accelerated by the planet's magnetic field to form a cloud of hydrogen surrounding the planet. When those high-speed protons collide with the atmosphere, they create an aurora known as a proton aurora.

Scientists have now discovered that this type of aurora is much more common than previously thought.

Quantum physics is the science of the very small, and its principles apply to the tiniest objects in the universe, from the smallest subatomic particles to the largest stars.

Heat energy has leapt across an empty vacuum

Quantum physics has up-ended classical physics principles, this time enabling heat to transfer across empty space without any form of medium.

This discovery could have a range of applications, from improving the efficiency of energy systems to unlocking the secrets of the universe itself.

Water from South African mine may contain life that was isolated for 2 billion years

The water lies in rock fractures accessed by drillholes and pipes in the South African mine.

Scientists are a step closer to finding life on Mars after discovering water in rock fractures far beneath the surface of the planet.

The discovery was made by a team of researchers from the University of Cape Town, who analyzed samples of rocks and minerals collected during previous missions to Mars.

Water is essential for life as we know it, and the discovery of water on Mars has reignited hopes of finding life on the planet.

Newfound Martian aurora actually the most common kinds of aurora

Iranian arrivals in Georgia plunge 34.5% in October

**TEHRAN** — Iranian arrivals in Georgia have decreased 34.5 percent in October from a year earlier, according to data compiled by the National Statistics Office of Georgia.

A total of 12,702 Iranian nationals visited Georgia last October that shows a 34.5 percent decrease year on year, Mehr reported on Sunday.

**TURIN** — A number of international academicians and experts have been invited to deliver lectures at the 6th Digital Marketing & Tourism Industry Congress to be held at Tehran's Raisans Palace Hotel on December 4.

The invitees include Pawan Chawla, who has been a Google business analyst, Christian Farid, a digital marketing genius specialist, consultant of companies such as Huawei, Ruiji Al, Banker, Berys, Amperio; Massimo Burgio, founder of Trend Social Media, and Chief Strategist of Global Search Interactive; Ozcan Spot, founder of Instagrammer, professional Instagrammer and teacher and blogger.

This will be also attended by CEOs, chief business officers, government officials, public relations managers and sales experts who are active in various businesses.

According to organizers, the conference will be conducted in such a way as the rule of digital marketing in international tourism will be the basis for the potentialities of online businesses in the tourism industry.

A poster for the 6th Digital Marketing & Tourism Industry Congress, which will be held at Tehran's Raisans Palace Hotel on December 4, in 2018, constituting 24% of all inbound visitors, Azerbaijan (1%), Turkey (8%), Pakistan (4%) and Bahrain (3%) constituted other major sources while the remaining 46% came from the rest of the world.

The Islamic Republic expects to reap a bonanza from its numerous tourist spots, the invitees include Pawel Chrzan, tourism industry consultant, and Christian Farioli, a digital marketing expert.

### Turkmenistan

**MENDELINOVO** — The Turkmenistan government has decided to lift the ban on tourists entering the country.

The ban was imposed in March 2020 to prevent the spread of COVID-19.

### Poland

**WARSZAWA** — The Polish government has announced plans to ease travel restrictions for tourists from the European Union and Schengen Area.

The new measures will come into effect on November 16.

### Canada

**TORONTO** — Canadian authorities have extended the temporary closure of the Canada-U.S. border until November 21.

The border closure was initially introduced in March to combat the spread of COVID-19.

### Turkey

**ISTANBUL** — Turkey has decided to lift the travel ban for tourists from Europe.

The ban was imposed in March to prevent the spread of COVID-19.

### United States

**WASHINGTON** — The U.S. government has announced plans to ease travel restrictions for tourists from Europe.

The new measures will come into effect on November 16.

### Germany

**BERLIN** — The German government has announced plans to ease travel restrictions for tourists from Europe.

The new measures will come into effect on November 16.

### Israel

**REHOVA** — The Israeli government has announced plans to ease travel restrictions for tourists from Europe.

The new measures will come into effect on November 16.

### Greece

**ATHENS** — The Greek government has announced plans to ease travel restrictions for tourists from Europe.

The new measures will come into effect on November 16.

### United Kingdom

**LONDON** — The UK government has announced plans to ease travel restrictions for tourists from Europe.

The new measures will come into effect on November 16.

### France

**PARIS** — The French government has announced plans to ease travel restrictions for tourists from Europe.

The new measures will come into effect on November 16.

**California gets landmark green law**

(July 22, 2002)

One of the first laws to tackle greenhouse gases in the United States, the Clean Air Act, is due to come into effect today. The law is aimed at reducing emissions of carbon dioxide, a gas which contributes to climate change, and a host of other gases that contribute to air QUALITY.

**Expert says new laws raise fears over killer air pollution in UK**

The UK’s failure to meet World Health Organization standards limits the amount of ultra-fine particles in the air we breathe, experts have said, warning that scientific evidence confirming the threat they pose is “abundant”. She said urgent studies are needed to clarify the actions and implementation period, he suggested. He noted that the ultra-fine particles go beyond the lungs, “It is really concerning that babies and children are particularly vulnerable,” Peters said. “If you look at the literature, children are much more vulnerable than adults.”

---

**Clean air days double for Tehranians this year**

Tehranis have experienced a 2-fold rise in the number of clean air days since the beginning of current water year (September 23, 2021) compared to the same period last year, the official with the Department of Environment has said.

**SOCIETY**

**TEHRAN — The national referendum on the Clean Cars Act is set to happen in December this year. The act is aimed at reducing the emission of greenhouse gases, a goal which is known as a sports utility vehicle -- trucks which average around 10.5 kilometers per hour speed. The Clean Cars Act, is due to come into effect today. The law is concerned with cutting down the number of ultra-fine particles in the air we breathe, as these are known to be a problem by stopping it as soon as it starts.**

---

**According to the latest statistics, 3.46 million hectares of land have been identified for dust mitigation across Iran, 15 to 20 percent of which are highly active, 25 percent are moderately active, about 60 percent of the sources are actively sites.**

---

**The next approach is angioplasty, in which a catheter is used to balloon open the arrowed part of the artery.**

---

**According to a paper, written by Peters and published in the Lancet, ambient air pollution has become one of the top 10 major risk factors for attributable death worldwide.**

---

**The Clean Air Act is the first law in America to address the issue of ultra-fine particles in the air.**

---

**EXPLANATION:** to prevent something from becoming a problem by stopping it as soon as it starts.
India: Several killed in Assam protests against citizenship law

The death toll from violent protests against a new citizenship law in India has risen to 11, with almost 1,000 reported injured in clashes that have killed four police officers. Tension remained high in Assam on Monday. More than 100 people have been arrested so far. The chief minister of Assam announced a curfew in five districts to prevent violence.

Britain's main opposition leader Jeremy Corbyn apologised Sunday for his party's handling of anti-Semitism, however, Prime Minister Boris Johnson said in a debate that the Labour party had “lost touch with the day-to-day experience of many people... and never took responsibility outside of parliament.”

UK opposition leader Corbyn 'sorry' for election wipeout

Turkish warships have been referred to as “islands of Israeli research vessels” in Cypriot waters, over which both countries have overlapping maritime zones. The report suggests that the ships are part of a strategy to force the island to a new round of talks for a settlement. The ships are “equipped for sea-going drilling” and are part of a “research project to pipe gas natural to Europe.”

Over the past year, Turkey has sent ships to search for crude oil in the waters near Cyprus. The ships are equipped for sea-going drilling and are part of a “research project to pipe gas natural to Europe.”

Turkey's warships 'islands of Israeli research vessels' in Cypriot waters

U.S. to announce 4,000-troop drawdown from Afghanistan: media

The Trump administration will announce as early as this week plans to withdraw around 4,000 troops from Afghanistan, U.S. media reported.

Talks between the United States and the Taliban resumed a week ago, with a goal of setting the stage for a “peace deal that leads to a path to reduce violence and eventually end a costly war.”

They were held in Washington, Thursday, however, after an attack by the Taliban in a key position near a U.S. base near Kabul. The talks are due to end on Saturday.

There are 13,000 U.S. troops currently in Afghanistan. The Afghan government has “not engaged in any peace talks with the Taliban,” officials said as saying the Trump administration intends to announce the deployment of additional forces.

Two of those said some of the troops would be redeploying early from training missions. The White House said no statement would be made this week, but that the “timing remains in flux.”

Leaked cables reveal further evidence that OPCW suppressed & altered findings on Douma ‘chemical attack’

A new cache of internal documents reveals that more than a dozen OPCW inspectors were suppressed & altered findings on Douma ‘chemical attack’ after President Donald Trump ordered the United States and allies to launch a missile strike on Syria in April 2017.

A memo addressed to OPCW Director-General Fernando Arias in May 2017 makes clear inspectors were given wrong information about Syria’s military assets, leading to incorrect conclusions. The memo also mentions that inspectors were prevented from seeing all the sites identified as targets by the United States and several NATO allies to justify airstrikes against Syrian military targets. The team’s findings, outlined in their preliminary report, illustrate some of these

Fusion complex calls in Britain for strikes against Christian terrorists

France’s CFDD union is opposed to transport strikes over the Christmas period, but will call for new actions in January if the government does not drop a pension reform proposal that would mean more years of work, its leader said Sunday.

In a major over haul of its pension scheme, the French government has proposed that people work two years longer to have a decent retirement, cause a lot of trouble from trade unionists who said they would strike until a strike action force an about-turn.

Over the past year, Turkey has sent ships to search for crude oil in the waters near Cyprus. The ships are equipped for sea-going drilling and are part of a “research project to pipe gas natural to Europe.”

Insiders say the Saintoudi had stayed out of the strike, which has caused tension and clashes to enlarge on Sunday.

Critics say the law, pushed by Prime Minister Hariri, the Conservative Prime Minister in Lebanon, will make it harder for people to join the national government, which is widely considered a应该 replace it. They have called the law "a bad deal for Lebanon" that will make it harder for people to join the national government, which is widely considered a "bad deal for Lebanon." They have called the law "a bad deal for Lebanon," arguing that the bill would be unbearable if it were not accompanied by some kind of financial reform plan.

U.S. senator Sasse's 'ballot box' plan that could prevent Cuba from occupying any new territories

The U.S. Treasury accused the individuals of “widespread and systematic” trying to take 

The rallies have, however, taken a violent turn, with some protesters vandalizing public property and opening fire on demonstrators.

Yemeni army detains 'global terrorist' Saleh Haddad in latest blow to Saudi-led coalition

The document includes three provisions: a ceasefire along the Hudaydah front and the redployment of armed forces out of the city that is a key port for the Saudi-led coalition; and a statement of understanding on the southern Yemeni city of Taiz, which was hit by a Saudi-led airstrike last week.

Saudi Arabia and a number of its regional allies launched a devastating campaign against Yemen in March 2015, with the goal of forcing the government of Hadi back to power and crushing the Iran-backed Houthi rebels. The UAE, which has done little to stop the Houthis, has also expressed its support for a ceasefire.

The war has also taken a heavy toll on the country’s infrastructure. The UN’s human rights chief, Michelle Bachelet, said on Tuesday that the war has claimed more than 100,000 lives since the conflict began.

“The war has also taken a heavy toll on the country’s infrastructure,” she said. “The UN’s human rights chief, Michelle Bachelet, said on Tuesday that the war has claimed more than 100,000 lives since the conflict began.”

Hariri set for PM appointment

Sadiq "is likely to be designated as Lebanon prime minister next week, sources said.

However, critics have also raised concerns about Hariri’s appointment, saying that it will be "unbearable if they could not take responsibility outside of parliament.”

The U.S. Treasury accused the individuals of “widespread and systematic” trying to take over one of the country’s main nuclear power plants.

Critics say the law, pushed by Prime Minister Hariri, the Conservative Prime Minister in Lebanon, will make it harder for people to join the national government, which is widely considered a "bad deal for Lebanon." The law would be "unbearable if it were not accompanied by some kind of financial reform plan.”

U.S. senator Sasse's 'ballot box' plan that could prevent Cuba from occupying any new territories

Although the original interim report was overtly critical of how the OPCW presented its findings, the final report is more cautious, allowing the OPCW to claim that the cylinders were more likely to have been used for medical purposes.

The documents report allegations made by OPCW inspectors of interference in previous looks – that the OPCW excluded and manipulated key findings in its final report on the incident.

UK opposition leader Corbyn ‘sorry’ for election wipeout

But the veteran socialist defended his far-left platform, saying he is going to find himself completely and utterly wrong,” he wrote in The Observer.

In an interview with Reuters in September, Hariri said he is willing to work with any government that would "commit to certain security measures, agree to talks with the Afghan Taliban, and a statement of understanding on the southern Yemeni city of Taiz, which was hit by a Saudi-led airstrike last week.”

As saying the Trump administration intends to announce the deployment of additional forces.

One source close to Hariri, who also heads the Free Patriotic Movement, said his party wouldn’t participate in a government led by Hariri.

The U.S. Treasury accused the individuals of “widespread and systematic” trying to take 

The United States and several NATO allies to justify airstrike against Syrian military targets. The team’s findings, outlined in their preliminary report, illustrate some of these
Momota wins 11th badminton title for record-breaking year

World number one Kento Momota fought back from a game down to win a record 11th title of the year on Sunday with victory at the BWF World Tour Finals.

"To perform and play the place decided Indonesia's Anthony Ginting (9-26-21-23-21-6) high-quality minutes in the final at the season-ending showdown in Guangzhou. Momota celebrates the new mark in badminton, outplaying Malaysian great Lee Chong Wei's 11-tournament wins in 2010, "his World Tour title tally (one from each of the four semi-finals, a third-place playoff and the final -- in as many days around 1,000 km)."

"I just can't express how excited I am to win this title," said Momota, who earlier this year won his 10th BWF World Tour title at the All England Open.

"Today I feel like I want to come out and give it my all," said Momota, who beat second seed Lee Chong Wei in the semi-finals before downing third seed Chou Tien-chen in the final. "This is a very important match. I'm very happy to win.

Lampard wants Chelsea players to show more personality

Chelse manager Frank Lampard said he understands the frustration of supporters after his side failed to secure their 12th Premier League title so far this season. The Blues have lost to Manchester United and Manchester City in their four matches so far, with their most-entrenched losing streak.

"I can understand the frustration of supporters," said Lampard, who will face former club Chelsea in the FA Cup semi-final on Saturday. "We had two points and we didn't get the three points. I understand that.

"But the way we've tried to play and the way we've tried to compete in the games, you can't take away from the season."

"We've got to get better and we've got to do that with personality."

Verona three-goal comeback stuns Torino

Hellas Verona battled back from three goals down with all three substitutes scoring in a 5-3 second-half rout to hold Torino 3-4 in Serie A on Sunday.

Torino had taken a comfortable lead at the Stadio Grande Torino after three goals from the boot of Ademola Lookman, the English midfielder who joined the club from Flamengo.

"We had to fight," said Verona's Domenico Berardi, who scored the equalizer. "It's a welcome day for us after the loss to Bologna."

"We need to carry this momentum forward to the next game."

Tokyo unveils heat-busting stadium, 7 months before Olympics

Tokyo formally unveiled its 60,000-capacity National Stadium on Sunday, more than seven months before the start of the Games, with a host of special features to beat the heat.

"The venue is the venue," said a smiling Kengo Kuma, the 37-year-old Japanese architect who is designing the stadium along traditional Japanese lines, with the use of wooden roofs and domes set to blend into the surroundings in central Tokyo.

"The stadium will host the opening and closing ceremonies plus the flag-lowering ceremony as well as the men's and women's football finals.

Pinturault crushes field for Val d'Isere slalom victory

Frenchman Vincent Pinturault has blown away the field to win the men's slalom in Val d'Isere with a mammoth run on Sunday.

The 28-year-old clocked a combined time of 1 minute 37.94 seconds, over one second clear of second-place finisher Zanariello. Myhre, Italian Stefano Gross (+1.47) rounded out the podium.

"I made some mistakes at the start of the season, but I did some good things as well. I just have to be more regular, less of the rollercoaster as I've been doing up until now," said Pinturault.

"In the absence of now-retired Austrian legend Marcel Hirscher, Pinturault acknowledged the World Cup was "out of his own league".

"The important thing is to keep, to keep working in the slalom in training."

"We have had a lot of them up until now, but it's a special one," he said. "In the absence of Hirscher, it was the most important one.

Chinese TV pulls Arsenal match after Ozil's Uighur comments

Ozil's comments drew online anger, with some users on Weibo calling for a ban on games involving the German. Nationalist tabloid Global Times called Ozil's comments "false" and said in a tweet that "more than 80% of Hong Kong pro-democracy protestors."

"Ozil's comments 'false' and said in a tweet that "even in tough games I did not give up.""

"I had tough seasons in 2016 and 2017, when Abe scrapped the original plans for Uighurs in Xinjiang aimed at homogenizing the region."

"The stadium was also lowered to a height of 47 metres (154 feet) from the original 75, which was criticized as too high and for being a potential eyesore on Tokyo's skyline."

"Total construction costs including design and supervising fees came to 56,000 billion yen ($515 million) within, the budget, according to official sources."

"For their penalty, there's a clash [between Malcom and Burnley's James Tarkowski]. But if you set the bar there it's going to be difficult. It can't be consistent."

"As soon as I go off the pitch I change to another team, so I am always ready."

Chinese state broadcaster CCTV has pulled a programming schedule so far this season. The broadcast of a game between Arsenal and Manchester United on Sunday has been rearranged having been called off in October due to the political unrest in Catalonia at the time. (Source: Sport360)
Hamid Estili not satisfied with Iran U-23’s preparation

Iran U-23 football team will play Qatar in friendly match to prepare for AFC U-23 Championship.

Hertha Berlin’s under-16s walk off due to alleged racist abuse

Hertha Berlin’s under-16 team stopped playing a game against rival Babelsberg after its players were allegedly subjected to racist abuse from their opponents on Saturday.

Lucescu: Al Hilal deserved to win

Hoosh head coach Baran Lucescu said Al Hilal deserved their 5-1 win against Espeance de Tunis in the second round of the AFC Club World Cup Qatar 2019 at Jassim bin Hamad Stadium on Saturday.

Paralympic Marathon to remain in Tokyo

The International Paralympic Committee (IPC) confirmed on Thursday that the marathon events at the Tokyo 2020 Paralympic Games will remain in the city. The decision was made at the end of the eighth IPC Tokyo 2020 Project Review, was taken following a thorough analysis of 2019 heat and humidity data and after consultation with athletes during November’s World Para Athletics Championships.

Kamalvand resigns as head coach of Pars Jonoubi

Faraz Kamalvand has resigned because of the financial problems of his team.

Sweden see off Thailand to book final berth

Sweden moved into the final of the U17 Women’s Football Tournament 2019 with a 3-1 victory against Thailand at the Miyabi Football Arena on Sunday. The Swedes wasted no time to seize the initiative after the first blow of the referee’s whistle, creating more chances than the Thai side.

Iran U23 football team to play Qatar

IRNA – Iran U-23 football team will play Qatar in friendly match to prepare for AFC U-23 Championship. Hamid Estili’s boys will meet Qatar on December 28 in Dubai.

Andrea Stramaccioni tired of Esteghlal’s behavior

PLC – Italian coach Andrea Stramaccioni says that he is tired of behavior of Esteghlal officials. He left the Tehran club after the Iranian club failed to pay his salary.

I want to say I am really tired. I am tired of the management,“ he added.

I am no longer Esteghlal coach. They have published my resignation and I don’t want to solve the problem. Nothing has changed since I left the club. I am no longer Esteghlal coach. They have published a picture of my resignation letter, but it’s not true,” he added.

I really don’t know if they want to keep me in Esteghlal but I want to say I am really tired. I am tired of the management,“ he added.

Faraz Kamalvand resigns as head coach of Pars Jonoubi

TASNIM – Faraz Kamalvand announced that he is no longer Pars Jonoubi’s head coach.

He stepped down from his role on Saturday at the end of the match between Masjed Soleyman, where the two teams shared the spoils.

Under stewardship of Kamalvand, Pars sit 13th in the Iranian Professional League table, five points above relegation zone.

Sweden see off Thailand to book final berth

Sweden moved into the final of the U17 Women’s Football Tournament 2019 with a 3-1 victory against Thailand at the Miyabi Football Arena on Sunday. The Swedes wasted no time to seize the initiative after the first blow of the referee’s whistle, creating more chances than the Thai side.

Swediloh forward Elrika Holmberg was put through on goal in the 15th minute but her shot from a tight angle was put out for a corner by Thailand goalkeeper Pavani Homayouni. However, she could do nothing as Sweden took the lead a minute later from the resulting set-piece. Midfielder Elin Sjödin got in behind the Thai defence to set up a half volley from inside the penalty area. Holmberg made no mistake from the resulting set-piece.

Sweden hit the woodwork through substitute Sara Eriksson in the 51st minute and couldn’t find the back of the net again in the remaining minutes of the first period.

In the second half, Sweden went on the search for a second goal and they finally got one in the 67th minute. Defender Fanny Ekstrand powered a shot towards goal but goalkeeper Phapaporn Sathasit didn’t have a chance to prevent the goal.

The Thai side looked to get back in the game and they almost did in the 74th minute through Monira Babu, who put the ball on the back of the net. However, the Swedes were able to keep the Thai side’s attack at bay and they held on to the slender lead for the remaining minutes of the match and booked their place in the final of the tournament.

The next match will see India and Thailand off on Sunday, where the second finalist alongside Sweden will be decided.

The tournament is part of India’s preparation for the FIFA U-17 Women’s World Cup 2020 in home soil.
