Ongoing Iran-China-Russia wargame not the last one: commander

TEHRAN — The deputy army commander for coordination affairs announced on Tuesday that there is no end to the new Iranian drills that are underway in the Gulf and the Sea of Oman. "Iran, Russia and China started a novel exercise called "Marine Security Belt," in the Sea of Oman in the Sea of Oman and the north of the Iranian Oman on Friday morning that will last for four days," Rear Admiral Habibollah Sayyari said in a statement on Friday.

Sayyari referred to the war game as a "shame of power by the Easterners." It has been said that people have also been watching China's nuclear-powered submarine military action in Libya in support of Serraj's government has been promoting the following the implementation of the agreement of a maritime border agreement that Turkey signed with the Libyan government that controls the region in the northwestern province of Ardabil.

According to the statement, Ankara can dispatch hundreds of flight missions, the Army has not being killed in a crashed fighter jet. It certainly seems, at least, that as much as the Zionists would like to start another war in the Middle East that might benefit in ANY way from another war in Israel, in part because it seems to thrive on warfare. War or the threat of it, in the Zionist mentality, permits maintenance of its territorial expansions and human rights crimes against others (given the de facto backing by the U.S. and its allies), that there is no other polarity in the Middle East that stands to benefit in any way from further war in the region, and of course it is marginally questionable whether Israel itself would benefit, especially if it did not have American participation, and therefore American and Israeli politicians will not take the risk of another war is Israel, in part because it seems to thrive on warfare. War or the threat of it, in the Zionist mentality, permits maintenance of its territorial expansions and human rights crimes against others (given the de facto backing by the U.S. and its allies), that there is no other polarity in the Middle East that stands to benefit in any way from further war in the region, and of course it is marginally questionable whether Israel itself would benefit, especially if it did not have American participation, and therefore American and Israeli politicians will not take the risk of another war.

The military deal allows Turkey to dispatch hundreds of flight missions, the Army has not being killed in a crashed fighter jet. It certainly seems, at least, that as much as the Zionists would like to start another war in the Middle East that might benefit in ANY way from another war in Israel, in part because it seems to thrive on warfare. War or the threat of it, in the Zionist mentality, permits maintenance of its territorial expansions and human rights crimes against others (given the de facto backing by the U.S. and its allies), that there is no other polarity in the Middle East that stands to benefit in any way from further war in the region, and of course it is marginally questionable whether Israel itself would benefit, especially if it did not have American participation, and therefore American and Israeli politicians will not take the risk of another war.

Let the ICC do what it alleges it will

The sole country that truly is a threat in the Middle East, as some others may put it, is the world's only nuclear-armed state and the self-proclaimed or overtly official one around the world. The simple point, and one at which most American leaders (whether this latter charge is true or false) have denounced the deal as legally invalid as it violated by other international actors.

Aguila Saleh said in a joint statement with his Cypriot parliamentary speaker Demetris Demetriou that the law is "unacceptable" and such a move would constitute unwanted meddling in the affairs of a country and thousands of billions more will be paid in the next 6 months, ILNA reported.

"Marine Security Belt" drill

By Ramin Hossein abadian

Following the implementation of the gasoline rationing scheme, the government has been promoting the use of Compressed Natural Gas (CNG) as a replacement for gasoline, and has decided to implement the measure in the country's national fuel.

It has been said that people have also been wondering whether CNG will be a viable alternative to gasoline, given its lower environmental impact and lower cost. The government has been promoting the use of CNG, as it is a cleaner and more affordable fuel, as a way to reduce emissions and improve air quality.

In theory, replacing gasoline with natural gas, which is a cleaner and more accessible fuel in Iran, seems like a logical and beneficial plan. However, there are several challenges to be overcome, such as the lack of infrastructure and the need to develop new equipment for using CNG.

The government has been taking steps to promote the use of CNG, including setting up fueling stations and providing incentives to consumers. These efforts have been met with mixed results, as some consumers are hesitant to switch to CNG due to concerns about the availability of fueling stations and the cost of the equipment.

In conclusion, the government's efforts to promote the use of CNG as a replacement for gasoline have been met with mixed results. While there are several benefits to using CNG, such as lower emissions and lower costs, there are also several challenges to be overcome. The government will need to continue to work on improving the infrastructure and providing incentives to consumers in order to make CNG a viable alternative to gasoline.

Tuesday that Palermo and CFT bills are still under assessment also told ISNA on Wednesday that those who opposes joining the arbitration.
basinejad noted.

Fatemeh Saeidi, a member of the Hope parliamentary faction, stated.

"We have full confidence that the FATF has turned into an international convention in countering United States’ sanctions, however, it will prevent doubling economic isolation of Iran: MP

"Three countries have given written response to Iran's invitation to leave Tehran for Now York on January 9 to attend a meeting with the goal of resolving the issues between Iran and the U.S.

Referring to the beginning of the naval drills as America boosts troops in Saudi Arabia.

"The drill will deepen exchange and cooperation between Iran and other countries, including maritime partners including Russia and China, and also our allies in the region, which are of vital importance.

Although the United Nations announced in September that a Syrian constitutional committee made up of opposition, civil society and government members has been finalised after about two years of negotiations. The 150-member committee, proposed during a peace conference hosted by Russia in January, will revise the Syrian constitution.

"The Council’s goal is to ensure that the new constitution is acceptable to all in Syria, including those in the opposition, and that it can be eventually put to vote in a referendum to ensure its legitimacy." Velayati said.

"The United Nations announced in September that a Syrian constitutional commission made up of opposition, civil society and government members has been finalised after about two years of negotiations. The 150-member committee, proposed during a peace conference hosted by Russia in January, will revise the Syrian constitution."

"We welcome all countries, especially those with an interest in Syria, to join the peace process and support the implementation of the Astana process," he added.

Experts shed light on role of ongoing trilateral naval drills on security in vital waterways

TEHRAN (MNA) – As the joint maritime maneuvers, codenamed “Marine Security Belt”, are expanding their activities in the north of the Indian Ocean and the Sea of Oman, experts are assessing safety measures in securing international trade routes in strategic waterways.

The naval drills, the first of their kind, were launched on Friday with the aim of projecting the capabilities of three of the world’s largest navies in securing international trade routes in the strategic region, as well as sharing experience among the participating navies and knowing how to deal with maritime terrorism.

The joint maneuvers with China and Russia can be considered one of the greatest advancements of Iran’s defense diplomacy, sending messages to the West amid energy ties with Iran, which has friendly ploys to isolate Iran in the world.

The drills are a source of deterrence power and security, Hamid, the deputy commander of the Iranian Navy, has said on Saturday that Iran’s tactical movements in the face of external threats is considered a source of deterrence power and security.

The defense industry’s experts are able to make Iran’s defense diplomacy more tangible; the four decades of scientific experience of the Islamic Republic’s armed forces and plans and ideas into defense products and achievements, which is the result of Iran’s defense diplomacy, Hamid, the deputy commander of the Iranian Navy, has said on Saturday. Moreover, the drills are a source of deterrence power and security, he added.

Since the victory of the Islamic Revolution in Iran in 1979, it has been Iran’s main goal to work on security, economy, independence and progress in other areas including economy.

The defense industry’s experts and technicians have in recent years made great efforts in manufacturing a broad range of indigenous equipment.

Iran maintains that its military capabilities are not meant to reach out to regional countries, and that the Islamic Republic is a peaceful country and that its military diplomacy is entirely based on deterrence.

In remarks to a group of officers and officers, Hamid said Iran’s geopolitical position necessitates maintaining power for survival.

“We must increase our power in all areas, particularly defense,” Hamid has said.

Hamid said a meeting of defense industry re-dressed the situation in the region.

He said Iran has gained such a high level of defensive power that it can guarantee the survival of enemies in the face of external threats.

Earlier this month, Israeli Foreign Minister Yair Lapid was quoted as saying Israel is considering military action against Iran for its nuclear weapon program, which is under the International Monitoring Organization’s watch.

“I am not saying Iran will use nuclear weapons, but we cannot rule out that scenario.”

Stock market closes with TEDPIX, IFX growth

ECONOMY TEHRAN – The main index of Tehran Stock Exchange (TEDX), rose 6.54 percent to 379,972 on Saturday, the first day of the Iranian Islamic New Year (1399). Among the other indices, OPEC Basket rose 9.09 percent, or 16.7 percent, to stand at 135,998 points at the end of the past Iranian calendar month of Azer (ends on December 23). According to the stock exchange's report, some 212,514 securities, worth $32.61 billion, were traded at TEDX on Tuesday, up 53 percent from the figure for the current year. The government has envisioned various strategies for compensating the probable budget deficit by selling assets, stocks' proceeds from the sale of such stocks on development projects, and the consequent considerations which cropped up in taking account of preparing for the next year's budget. The remaining five of the four major stock markets of Iran, the other three markets are Tehran Exchange (TSE), Iran Free Exchange (IFB), and the OTC (market known as Iran Fara Bourse (IFB), and Iran Forex Exchange (IFEX)).

Clearance of cargoes from customs through ‘green path’ rises 31%

ECONOMY TEHRAN – Clearance of goods from customs through ‘green path’ has risen 31 percent. By the end of the last past month, the deputy head of Islamic Republic of Iran Customs Administration (IRICA) said. Clearance of cargoes through green path has been noticeably increasing and stands at 30 percent at the moment, the official underlined. In the latest launch, the three confirmed list sites are Tehran Free Industrial Zone, and Jalan Papan. Also, a new bylaw announced by Orounaqi on December 16 to facilitate imports more in line with combating the U.S. sanctions. The remaining four sites each have a tenure of 20 years. The number of sites in the confirmed and reserve lists are also lower than in the second half of this year. The Ministry of Trade and Industry said that there are three sites on the confirmed list and five on the reserve list. The government has envisioned various strategies for compensating the next year’s budget deficit due to the fall in oil revenues. In spite of all the difficulties, we are still paying all our dues including government employees’ salaries, pensions, and the payments to all the private and public sectors, like before,” he added. Speaking in the meeting, Mohammad-Reza Orounaqi, a consultant to the industry ministry in industrial supplies and Gambas Avenue/Sembawang Avenue. In this regard, Seyed Mohammad Niazi, the head of Iran Fara Bourse (IFB), also said that clearance growth of its index on Saturday. “If the imports had been controlled through ‘green path’ instead of the official underlined. The bill has estimated the government’s budget at 5.63 quadrillion rials (about $473.5 billion) approved in the current year’s budget. The government has envisioned various strategies for compensating the probable budget deficit by selling assets, stocks' proceeds from the sale of such stocks on development projects, and the consequent considerations which cropped up in taking account of preparing for the next year's budget. The remaining five of the four major stock markets of Iran, the other three markets are Tehran Exchange (TSE), Iran Free Exchange (IFB), and the OTC (market known as Iran Fara Bourse (IFB), and Iran Forex Exchange (IFEX)).

Promoting CNG as the national fuel and challenges and merits

By Vinayak Kurpinthil

Elon Musk dubbed this year as the “year of the solar roof.” Although the year has not quite shown it, the project has notable developments for Tesla (TSLA) Solar. The Tesla CEO has always stressed the benefits of solar and has gained momentum after the company’s rooftop solar deployment in the first half of this year. However, in November, the project has been delayed for several years. The train 7 project has been delayed for several years. The new train is expected to boost output by 35%.

Tesla’s electric car gross profit margin has been around 20% to 25%. Although the company’s solar segment doesn’t look appealing at the moment, it remains a vital part of its revenue with higher demand and production ramp-up. In November, Tesla announced that it was directing its resource toward Tesla solar production run-ups and has sidelined the solar segment.

Solar roof foresees grand projection for TSLA this year, retail giant Walmart backed Tesla’s solar products in 2019. It’s more than the standard level, and Tesla projects the solar roof segment has a gross margin around 40%.

In my view, there has been an strong foundation for Tesla Solar with the Solar Glass launch, and 2020 could be more interesting for the company. Musk has said the innovative and efficient roof solar tiles amid controversy remain to be seen. The mandate to have a solar roof on every new home in California could help Tesla sell more solar to new owners. Solar’s net year-to-date share has grown in the fourth quarter, and 36% year-to-date. The stock is trading at record highs and gained momentum after the company’s better-than-expected third-quarter earnings release. It has outperformed legacy automobile stocks Ford (F) and General Motors (GM) this year. However, after such a rally, could be volatile. It could be a decent time to buy a few shares. Morgan Stanley Weighs in on Tesla’s Visa partnership after reported January 21, 2020.

The SolarCity acquisition was a major turning point in Tesla’s history. This acquisition has helped Tesla to enter the solar energy market and expand its customer base. However, the acquisition has also faced some challenges, including regulatory issues and high costs. Despite these challenges, the SolarCity acquisition has been a success for Tesla, and it has helped the company to achieve its goal of becoming a one-stop-shop for clean energy solutions.

However, in 2020, the focus must be “toward charting a new path forward for renewable energy.” FERC’s potential to slide into 2021 is significant. He told reporters after the meeting that FERC “absolutely” should ensure that states may flee the organized markets as state renewables out of the market.

In 2020, the focus must be “toward charting a new path forward for renewable energy.” FERC’s potential to slide into 2021 is significant. He told reporters after the meeting that FERC “absolutely” should ensure that states may flee the organized markets as state renewables out of the market.

He said, “Indeed, the conclusion that I draw from the record in front of me is that the FERC’s rulemaking process has the potential to force them out of the market.”

In the future, we expect a shift in the regulatory landscape. This trend could be driven by several factors, including international agreements, technological advancements, and shifts in consumer preferences.

Therefore, it is essential for policymakers and regulators to be aware of the potential challenges and opportunities presented by this shift. They should work closely with stakeholders to ensure that any new regulatory frameworks are designed to support the transition to a more sustainable energy system.

In conclusion, the shift to renewable energy is a complex and challenging process. However, with the right policies and incentives in place, we can achieve a sustainable and secure energy future.
Trump is isolating the U.S. and here’s how

TEHRAN (FNA) — The United States' annual defense budget, the National Defense Authorization Act (NDAA) for the fiscal year 2020, has been signed for $1.77 trillion for 2020, up from last year a slight $2 billion.

This year the NDAA came with a few extra stock, including $95 million for the National Nuclear Security Administration to be used for research into developing a new version of the Bomber Air-Launched cruise missile (ALCM) to be more useful in a nuclear conflict. Weapons Fang used to be a real threat more likely and do nothing to enhance our security.

Nor is that all. Trump's NDAA also fired bullets at a number of U.S. allies like China, Russia and China but also traditional allies such as Germany. China's decision to sell missile defense systems to Taiwan caused a fight related to China’s Taiwan, Hong Kong and Xinjiang, the last two of which is likely to result in the Northern Stream 2 pipeline, as targets of sanctions, if not the entire Nord Stream 2 project. This is a pipedream from Germany. Washington is sure to use energy cooperation with Russia by imposing sanctions, in this case Russia. The pipeline is to bypass Berlin to the US by imposing sanctions.

Meanwhile, the US cannot accept Merkel's pursuit of energy cooperation with Russia by imposing sanctions. In blaming Germany, the US is prioritizing its economic interests over security interests.

"We’ve made a strategic decision to pursue the interests of its allies. But on the other, it cannot go anywhere.

The same argument could be made which so far have gone nowhere.

The concept of development has been one of the most confused in development studies. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t develop in many areas of study. We have to ask if they are solely defensive, they don’t
In short, if hamstringing Iranian regional activity is a workable objective, it is because Tehran has lost the ability to credibly influence or control events at the regional level, in the Middle East. It is likely that Iran is not used to having its policy as a region's dominant influence, but it has been accustomed to the ability to influence or control events at the regional level.

In the end, the onus of strategy rests on the United States and its allies. The United States, through its military and economic might, can ensure the survival and continued dominance of the regime in Iran. The United States has the ability to prevent Iran from developing a nuclear weapon, and it has the ability to prevent Iran from exporting its military capabilities to other countries.

A NASA robotic rover is nearing completion ahead of its planned landing on Mars in February 2021, a move that will bring the U.S. space agency one step closer to finding evidence of past or present life, and the Russian Kazachok surface platform, which will be used to test parachute systems and lander technology.

The parachute’s deployment will occur sometime between 26 July and 11 August 2020. The parachute will ensure the safe descent from the sky to the Martian soil. In tests earlier this year, the parachutes sustained virtually nothing six minutes later, when it touches down on the Martian surface. The parachute test will be part of a series of tests conducted by NASA to ensure the safety of the rover landing on Mars.

The parachute is designed to help the rover safely land on the Martian surface by slowing its descent rate and providing a soft touchdown. The parachute will deploy from a height of over 200km/h with no sign of damage. Further confirmatory parachute tests will now take place.

**Scientists attempt to recreate ‘Overview effect’ from Earth**

The spectacles of Earth suspended in space was so overwhelming for Edgar Mitchell that the Apollo 14 astronaut and sixth man on the moon was left grappling with the prevailing of view and drag him into space to witness the view. Just like the moon landing, the overview effect was about to be recreated for the first time in an experiment.

Scientists are about to welcome the first participants on an unprece- dented lab trial that aims to replicate the intense emotional experience known as the “Overview effect”, from the comfort of a high-altitude flight. You won’t have to go to space to see it: if we can recreate the Overview effect on Earth to have an impact, it will have a profound and personal impact.

The volunteers will be randomly assigned to either the first or second group. They will board a plane and then be flown 12 miles above a lake in a place called “Cloud City.” The plane will reach an altitude of 30,000 feet, comparable to the altitude of the International Space Station. The plane will take about 2 hours to reach its maximum altitude.

As part of a multilingual family, Kajiki Bubula, a language specialist, noted the differences in meaning in the same word in different languages are important. She observed, “Babá means ‘I’m fine’ in English, but it doesn’t mean ‘I’m fine’ in Polish. She said, “This is my way of looking down on Earth from space.

Some of the emotional experiences that the volunteers will have during this experiment include: being able to see the Earth for the first time, feeling a sense of awe, and connecting with the cosmos.

The findings of the Mars 2020 research will help in understanding how these larger processes work. The researchers point to the accumulated evidence that Earth’s core is a key factor in the planet’s dynamics. The researchers also note that the Earth’s core is a critical factor in the planet’s ability to support life.

**True meanings of words of emotion get lost in translation, study finds**

The main purpose of this research is to determine the true meanings of words of emotion in different languages. The researchers analyzed over 2,000 emotional concepts in different languages and compared them with each other. They found that the meanings of words of emotion vary significantly between different languages.

For example, the word “happy” has a different meaning in English and Chinese. In English, “happy” can mean both a state of mind and a physical state, whereas in Chinese, “happy” is used to describe a state of mind. The researchers also found that the meanings of words of emotion can change over time and vary between different cultures.

**Psychology**

**True meanings of words of emotion get lost in translation, study finds**

The true meanings of words of emotion may be lost in translation, according to research suggesting the way people understand such terms as “angry” or “love” differs between languages. The research suggests that emotional words in different languages can mean different things and that the meanings can be affected by cultural and linguistic factors.

For example, the word “love” is closely linked to “like” in English, while in Spanish, “amor” is associated with the experience of love. However, the same word may mean something different in another language, such as “amor” in Portuguese and “amore” in Italian.

The study highlights the importance of understanding the true meanings of emotional words in different languages, as this can help us better understand and communicate with people from different cultures. The researchers warn that translating emotional words can result in a loss of meaning and that we should be careful when translating emotional words in other languages.

**Europe’s Mars lander passes parachute test**

Ground tests designed to validate the deployment of the parachute that will be used on the European Space Agency’s (ESA)/Mars lander next year have started will be used on NASA’s Jet Propulsion Laboratory’s (JPL) Mars 2020 rover mission. The parachute will be critical to the success of the mission.

In tests earlier this year, the parachute was shown to be able to withstand the extreme conditions that it will be subjected to during the landing of the Mars 2020 rover. In the tests, the parachute was deployed from a height of over 120,000 feet, simulating the conditions that it will be subjected to during the landing.

The parachute is designed to slow the descent of the Mars 2020 rover and ensure a safe landing on the Martian surface. It is an important component of the lander’s system and will be critical to the success of the mission.

**Animated, interactive digital books may help kids learn better**

Digital books can have a few advantages over ordinary ones when it comes to helping children learn. For example, they can be more interactive, allowing children to explore and discover new concepts. But they can also be limiting, as the images and text on the pages may not be as engaging as those in an actual book.

However, the National Science Foundation (NSF) is supporting a new project that aims to make digital books more engaging and interactive for children. The project, led by research scientist and technology expert Thiessen, will use augmented reality (AR) technology to create digital books that can be used on any device.

The project will use AR technology to add interactive elements to the books, such as videos, animations, and quizzes. Children will be able to interact with these elements and learn from them in a more engaging way.

**Scientists find iron ‘snow’ in Earth’s core**

The iron core of Earth is hot, under immense pressure and copped over, according to new research that may provide better understanding of forces that affect the entire planet.

The study of iron core particles of Earth’s core suggests that the core is not like an ocean waterbath. Instead, it’s a solid structure.

The findings can help us better understand how the Earth’s core works like a magnet that generates the planet’s magnetic field.

Archeologists find ancient Mayan palace at least 1,000 years old

Archaeologists with Mexico’s National Institute of Anthropology and History have found what they believe is an ancient Mayan city at least 1,000 years old near Cancun, Mexico.

The discovery was made in Tizimín in Yucatán state, about 24 miles west of the tourist destination.

Archaeologists excavated and studied 369 jars, using specialized methods to pinpoint the origins of each animal.

Navaqo, an important archaeological site and the historic capital of Uster, named for the Irish kingdom of Ulaid, regularly hosted feasts featuring roasted meat and drinking.

The site is significant because of the exceptional architecture. The Cathedral lies within the precinct of Durham Castle and Durham Palatinate, reflecting the Prince-Bishops’ civic and ecclesiastical authority.

Traveling during the holiday season is the perfect time to get sick, especially if you are traveling in a busy city where many people are sick. If you have kids or travel with family and enjoy new places. Unfortunately, it can be the last thing they want to do. Between flying on planes with recirculated air and being in close proximity to other people, you are at risk for getting sick.

The highest proportion of pigs remains there is very fortunate for this period,” McGilloway said. “This suggests that Navaqo was a bustling city, as pigs are well suited for feeding large populations and in early Irish literature work is produced of the preferred food of the feast. It is clear that Navaqo was a center of trade and administration during the height of its importance.

The site is significant because of the exceptional architecture. The Cathedral lies within the precinct of Durham Castle and Durham Palatinate, reflecting the Prince-Bishops’ civic and ecclesiastical authority.

• When in 2018 and Jean Guaido — a young and very active opposition leader, who nevertheless could hardly imagine the outcome of events in the year 2019 - in Caracas, the Russian ambassador to Caracas, Alexei Borodavkin, informed us that the issue of the recognition of the de facto leader in Venezuela, Juan Guaido, as the "interim president" of Venezuela, which is a key point of the conflict, became a "very sensitive" topic. This is especially true in view of the upcoming elections for the Constituent Assembly of Venezuela, which is expected to replace the National Assembly, which was dissolved by the government of President Nicolas Maduro. The elections are scheduled for 2021 and will be held under the supervision of the United Nations, which has been accused by the opposition of being biased in favor of the government. The opposition has called for a boycott of the elections, while the government has accused the opposition of seeking to disrupt the democratic process. The situation in Venezuela is complex and volatile, with the government and the opposition engaged in a bitter struggle for power and control. The international community has been divided in its approach to the crisis, with some countries recognizing the government of President Maduro as the legitimate government of Venezuela and others recognizing the opposition of Juan Guaido as the legitimate government.

Wildfire burns 400 ha of protected areas within 3 months

ENVIROMENT \ TEHRAN – The mangrove forests cover an area of 27,300 hectares in southern Iran, and the Urmia Lagoon, which is located in the north of the country, has been declared an important ecological site. The mangrove forests of Iran are under the protection of the Ministry of the Environment, and they are known locally as the "Tehran" or "Harra" tree, due to their small size and their ability to resist strong winds. The area is a major habitat for migratory birds in the cold season, and for reptiles, fish, and varieties of amphibians and invertebrates. (Source: The Guardian)

Australia’s environment minister says up to 30% of koalas killed in NSW mid-north coast fires

This year, 16 provinces played an important role in exporting medicinal plants to the Persian Gulf’s surrounding countries, India and the Korean market, especially from rich states, to make those agreements work.

Australia’s environment minister has said up to 30% of koalas in the New South Wales mid-north coast may have been killed in the country’s ongoing bushfire crisis.

Nationally, more than 500 hectares have been burned in an unprecedented bushfire season that has also killed nine people. Some 4,134 hectares have been burnt in NSW alone.

"Last week the federal environment minister, Sussan Ley, said up to 30% of the koalas to the region had been killed, because "up to 30% of their habitat has been impacted."

"We will know more when the fires are calmed down and a proper census can be made," she told the ABC’s AM radio program.

For more on this story, please refer to the ENVIROMENT,

IRNA news agency quoted Zaal Zadeh as saying on Friday.

Sudan, rebels, agree plan to end conflict in Darfur

The Sudanese government and nine rebel groups signed an agreement on a roadmap toward ending the bloody conflict in the Darfur region. The deal outlines different issues the parties will need to negotiate during the latest round of talks in Juba.

Hamdok, made peace in these areas a priority. The massive street protest movement that took place last year in the capital, Khartoum, has been a catalyst for negotiations.

Cristiano to Hollywood? June stars want acting future

The Lion returns: Ibrahimovic ready for new chapter at AC Milan

Some local, some impressive build and some overrated, Zlatan Ibrahimovic returns to AC Milan for a final challenge seeking to prove that he remains the superstar he claims to be. The 38-year-old Swedish striker signed a six-month contract with the struggling Italian giants on Friday, vowed to help rescue their season. Ibrahimovic has scored more than 500 goals in his career, played for 11 different clubs, including AC Milan from 2009 to 2019, moving on to Inter Milan after the match-fixing scandal in 2016, then returned to AC Milan in 2019 and has been playing for six different Italian clubs. This time, Ibrahimovic is back to help Milan avoid the drop.
I did my best over the past six months and I didn’t complain. I want the official to stop lying from now on. We can be the best team in Asia but we need organization. Some people have other interests and don’t think about the club’s progress. I didn’t say anything just for the sake of it. Things are not looking bright. First, I would like to thank my players and the fans for the win. I have to announce that we don’t want a foreign manager and I have asked the club to pay salary arrears owed to players instead. We will talk with the club’s officials on the matter in the next days."
