ziałed ignorance of reaching the designated orbit. Mohammad Javad Azari Jahromi and Information and Technology said, that Zafar satellite has been designed and completed with the same capabilities as the first Zafar, however, we achieved higher accuracy of 16 meters.

Iran is absolutely not being served by these self-appointed Chinese experts. We are not going to implement any threat or any kind of threat to any nation. We have not come to undertake any war against any nation. We are not pursuing any nuclear armament or any kind of armament as foreign media tries to depict. Iran is absolutely not a nation that is keen on injuring other nations.

On the other hand, we do not wish to see the development of any kind of weapon. We just wish to develop whatever we had before and in the end we will try to prevent any weapon from falling from the sky and landing on the head of any nation.

Iran is absolutely in no case, in no way, will Iran ever make any kind of armament. We are absolutely not going to dream of making any kind of weapon. We are absolutely against the making of any kind of weapon. We wish to have peace and have a peace-loving society.

Iran is not pursuing any kind of armament, but we are pursuing peaceful development.

Iran is absolutely not going to pursue any kind of armament. We are absolutely against the pursuing of any kind of armament. We wish to have peace and have a peace-loving society.

Iran is absolutely not going to pursue any kind of armament. We are absolutely against the pursuing of any kind of armament. We wish to have peace and have a peace-loving society.

Iran is absolutely not going to pursue any kind of armament. We are absolutely against the pursuing of any kind of armament. We wish to have peace and have a peace-loving society.

UN Security Council not discussing expansion of arms embargo on Iran: Moscow

MOSCOW (Reuters) – The United Nations Security Council is not currently discussing the possibility to extend the arms embargo imposed on Iran, which is due to expire in October, Russian Foreign Minister’s Deputy for Nonproliferation and Arms Control General Vladimir Ermakov has said in an interview.

“I am aware that there is no official discussion on this issue at the Security Council or at any other platform,” Ermakov said, when asked whether there were any talks on possibly extending the embargo.

“The above-mentioned resolution, which I would like to now address specifically, relates to UNSCR 2231, not the Security Council, or at other platforms,” Ermakov said, when asked whether there were any talks on extending the embargo.

No fault with Palermo bill on constitution: presidential aide

By staff and agency

The US custom chief has accused Iran of misusing US-based technologies to threaten the region’s stability. The United States is aware of the possibility to extend the arms embargo imposed on Iran, which is due to expire in October, Russian Foreign Minister’s Deputy for Nonproliferation and Arms Control General Vladimir Ermakov has said in an interview.

“I am aware that there is no official discussion on this issue at the Security Council or at any other platform,” Ermakov said, when asked whether there were any talks on possibly extending the arms embargo.

ThePalermo bill has been introduced in the US Congress as a response to the killing of Iranian top military commander Qassem Soleimani in a US drone strike in January 2020. The Palermo bill seeks to prevent the US from providing technical assistance to Iran for the development of missile technology.

The Palermo bill was introduced by US Representative Mike Pompeo and signed by US President Donald Trump. The bill is aimed at preventing Iran from acquiring or using advanced missile technology, and to impose sanctions on individuals and entities involved in the transfer of missile-related technology.

The Palermo bill has been met with criticism from some US lawmakers who argue that it could undermine the nuclear deal with Iran and lead to a new arms race in the region. However, the bill has also been supported by some US lawmakers who believe it is necessary to prevent Iran from acquiring advanced missile technology.

Iranian economy emerging from recession: central bank

The comments came as the Iranian currency continued to dip against other major currencies on Tuesday with each U.S. dollar traded at 240,000 rials in the unofficial market in Tehran.

Earlier this week, Iranian Economy Minister Farhad Dejazegh also said the country built itself out of economic recession, as the economic growth without taking all the state revenues in account has been positive since March in 2019 despite the U.S. sanctions. Iran is looking to sign a number of deals to improve its position among the enemies.

Oil prices rise as new virus cases slow, easing Chinese demand concerns

Over $7.8b worth of energy projects to be inaugurated by mid-March

Iran's natural gas consumption touches 600 mmc

The electrification of transport, buildings, and industrial sectors in Europe could help to reduce greenhouse gas (GHG) emissions in Europe by 15% to 20% by 2030, compared to 2018 levels and 90% by 2050. To achieve this, researchers at the International Energy Agency (IEA) have launched a scenario with the aim of improving the uptake of electric heating systems, to help to reduce greenhouse gas emissions from building heat, and to ensure more efficient use of power generation, creating another 649 gigawatts of potential new electric power generation capacity in Europe by 2050.

The electrification scenario, called the “2050 Energy Scenario”, is designed to help to achieve these goals, while also ensuring that the energy system is resilient to the challenges of climate change and the transition to a low-carbon future. It includes the following key elements:

- Electrification of transport: The electrification of transport is one of the most promising pathways for reducing greenhouse gas emissions. The scenario assumes that about 80% of all new passenger vehicles sold in Europe by 2050 will be electric, and that about 70% of electricity consumed in Europe will come from renewable sources.

- Electrification of buildings: The scenario includes the electrification of heating and cooling systems in buildings, with a focus on improving the efficiency of energy use in new and existing buildings.

- Electrification of industry: The scenario also includes the electrification of industrial processes, with a focus on improving the efficiency of energy use in sectors such as iron and steel, chemicals, and cement.

- Energy demand: The scenario also includes measures to reduce energy demand, such as improving energy efficiency in all sectors, and investing in energy storage and demand response.

The scenario is supported by a range of technologies and policies, including the development of new energy sources, such as offshore wind and solar power, and the implementation of energy storage and demand response technologies. It is also supported by a range of regulatory and financial incentives, such as subsidies, tax breaks, and purchase agreements.

The scenario is designed to be flexible, allowing it to be adjusted as new technologies and policies become available, and as the energy system evolves. It is also designed to be robust, allowing it to be adapted to different scenarios, such as those with or without the adoption of new technologies, or those with or without the adoption of new policies.

The scenario is also designed to be cost-effective, allowing it to be implemented at a reasonable cost, while still achieving its goals.
Acounnterintelligence perspective on the Wuhan Virus – a 'bio-false war' flag attack?

By Ben Hendriks

In February an element of the Chinese natural outbreak less virulent than SARS but then since 26 January 2020. Originally you declared it a contagion helpful in isolating the disease. It is not yet clear if such a disease was engineered, with the Wuhan Institute of Virology, a bio-war cesspool in every Chinese village. The General Intelligence Agency (CIA) known to collaborate with the Mossad in a bio-warfare and electro-magnetic warfare; or a full scale bio-war as already demonstrated, and begin deposing China. All three! Forgive me, but does the Chinese Communist Party (CCP) have all the answers? How can any responsible person believe the official Chinese numbers in Wuhan are correct? If the Chinese government has the ability to control the spread of the virus, why did they begin the lockdown of the city of Wuhan 16 days after the initial reported Wuhan virus? Why should we believe the Chinese government if they cannot count bodies in their own country? The Chinese government has stated that in Wuhan 3% of the population has been infected on a province-level basis. Yet, the number of deaths reported has not broken in Nigeria, and all governments, agencies, states, should be very alert to all new states, so they should use a joint response as a core action, in such cases, and protect public health as a priority, not for the purposes of the problem, not the solution. There is no substitute for transparency, even if only to tell the world that the Chinese government is not being transparent.

There are several factors that are causing the global concern about the Wuhan virus. One of those factors is the level of attention that the Chinese government is paying to the coronavirus. The Chinese government has been accused of downplaying the severity of the virus, and of not sharing enough information with the rest of the world. This has led to concerns about the accuracy of the official numbers in Wuhan, and about the government's ability to control the spread of the virus. The Chinese government has been accused of not taking enough action to control the spread, and of not using enough resources to treat patients. This has led to concerns about the adequacy of the medical system in China, and about the government's ability to provide adequate care for patients.

Another factor is the level of attention that the virus is receiving from the international community. The World Health Organization (WHO) has declared the virus a global health emergency, and has called for a coordinated international response. This has led to concerns about the effectiveness of the international response, and about the ability of the WHO to coordinate the efforts of the various countries involved. The international response has been criticized for not being strong enough, and for not using enough resources to treat patients. This has led to concerns about the adequacy of the medical system in China, and about the government's ability to provide adequate care for patients.

A third factor is the level of attention that the virus is receiving from the media. The media has been accused of downplaying the severity of the virus, and of not sharing enough information with the rest of the world. This has led to concerns about the accuracy of the official numbers in Wuhan, and about the government's ability to control the spread of the virus. The media has been accused of not taking enough action to control the spread, and of not using enough resources to treat patients. This has led to concerns about the adequacy of the medical system in China, and about the government's ability to provide adequate care for patients.

A fourth factor is the level of attention that the virus is receiving from the political leaders. The political leaders have been accused of not taking enough action to control the spread, and of not using enough resources to treat patients. This has led to concerns about the adequacy of the medical system in China, and about the government's ability to provide adequate care for patients. The political leaders have been accused of not taking enough action to control the spread, and of not using enough resources to treat patients. This has led to concerns about the adequacy of the medical system in China, and about the government's ability to provide adequate care for patients.

A fifth factor is the level of attention that the virus is receiving from the public. The public has been accused of not taking enough action to control the spread, and of not using enough resources to treat patients. This has led to concerns about the adequacy of the medical system in China, and about the government's ability to provide adequate care for patients. The public has been accused of not taking enough action to control the spread, and of not using enough resources to treat patients. This has led to concerns about the adequacy of the medical system in China, and about the government's ability to provide adequate care for patients.

A sixth factor is the level of attention that the virus is receiving from the media. The media has been accused of downplaying the severity of the virus, and of not sharing enough information with the rest of the world. This has led to concerns about the accuracy of the official numbers in Wuhan, and about the government's ability to control the spread of the virus. The media has been accused of not taking enough action to control the spread, and of not using enough resources to treat patients. Iran denies first case of coronavirus death

The World Health Organization on Tuesday proposed an official name for the virus caused by the new coronavirus: COVID-19. The acronym stands for coronavirus disease 2019, as the virus was first detected toward the end of last year.

According to the WHO, coronaviruses (CoVs) are a large family of viruses that cause illness ranging from the common cold to more severe diseases such as Middle East Respiratory Syndrome (MERS-CoV) and Severe Acute Respiratory Syndrome (SARS-CoV). A novel coronavirus (2019-nCoV) is a strain that has not been previously identified in humans.

Common signs of infection include respiratory symptoms, fever, cough, shortness of breath and difficulty breathing. In more severe cases, the infection can cause pneumonia, severe acute respiratory syndrome, kidney failure, and even death.

Standard recommendations to prevent infection spread include regular hand washing, covering mouth and nose when coughing and sneezing, thoroughly cooking meat and eggs, avoid close contact with anyone showing symptoms of respiratory illness such as coughing and sneezing.

Pakistan and Iran, where officials said there have been no cases of coronavirus, have confirmed five and 28 cases, respectively, with recoveries in both countries.

Air pollution has major impact on children in sport, study warns

Britain’s future sporting performance could be hampered by air pollution because some training grounds are in areas with dangerously high pollution levels, a report has revealed.

The Breathe GIJ study analyzed pollution levels at 94 sporting sites, with one of the highest recorded levels at Birmingham’s Perry Park, host of the 2012 Commonwealth Games.

Other important training grounds, such as the running track where Sir Mo Farah and Christine Ohuruogu trained, have pollution levels that breach World Health Organization (WHO) recommended limits.

The study suggests children exercising in areas of high pollution could experience lung function that will limit their future sporting performance.

Professor Janie McNeely, a senior lecturer in respiratory medicine at King’s College London, said: “A child growing up with asthma in polluted environments is likely to suffer long-term damage to his potential to train ... which is likely to have an impact on their optimal level of performance.”

Jonathan Grigg, a professor of paediatric respiratory and immunological diseases at the University of Oxford, said: “There is very strong evidence that exposure to air pollution stunts children’s lung development, and we can be fairly confident that the more pollution you are exposed to, the less your lungs will have reduced exercise capacity.”

To produce the report, campaign group The Air Team spoke with senior respiratory consultants, as well as leaders in physical education, to assess the effects of air pollution on children’s lung function and sporting ability.

They also assessed air pollution at 94 sports sites in England and found that 31 clubs breached WHO recommended limits, while 32 came close to the threshold.

Perry Park was the third most polluted of the sites across London, Birmingham, Nottingham, Southend and Sheffield, with an annual mean level of 25 micrograms of nitrogen dioxide (NO2), a cubic metre of air (µg/m³) – the WHO recommends a safe level of 400/µg/m³.

The training grounds of Ridgeway Rovers, where David Beckham and Harry Kane formerly played, and Altrincham FC, have particulate matter levels of just over 90/µg/m³, which is also above the WHO recommended limit.

Dr Augustine Hall’s home of the Victoria Park Harriers and Tower Hamlets Athletics Club, has estimated levels of air pollution that are over some food that had been dropped over the conflict zone. Seeing a pair of black mice squabbling over eggs. Avoid close contact with anyone showing symptoms of respiratory illness such as coughing and sneezing.

Words such as ‘swing vote’ help you get a resolution through the UN Security Council (UNSC), which needs 9 votes out of 15 to get the resolution it wants. Does this mean some Council members will come under pressure to vote in favor? This report from Greg Barnatt explains.

Although there’s no clear evidence that political pressures are being applied yet, some of the council’s smaller nations like Greece, Costa Rica and Monaco might feel they are being ‘trammelled’.

No single nation wants to be put in the spotlight as the swing vote that could give the UNSC approval to authorise the use of force against Iraq. The lack of one vote could give the UNSC approval to authorise the use of force against Iraq. The lack of one vote could give the UNSC approval to authorise the use of force against Iraq.

Child labor drama “The Sun” shines as best film at Fajr festival

The Tehran Symphony Orchestra will be performing pieces by composer Behzad Abdi in memory of the victims of the Ukrainian aircraft, which was unintentionally shot down by Iran.

Iran’s National Orchestra will also commemorate the Quds Force commander in a U.S. air raid in Baghdad.

The film produced by Rasul Sadr-Ameli, directed by Bahman and Bahram Ark.

The Tehran Times — Oscar-winning Iranian director Majid Barzegar’s drama “The Rain Falls Where It Will” has played in four provinces of Sistan and Baluchestan since 2017, bringing big wins for South Korean satire “Parasite” and Iranian films on resistance and jihad this year with “Day Zero” about Iran’s intelligence operation against Iraqi forces.

The film also won Malekan the New Audience award, which is presented to the best directorial debut feature film. The Golden Simorgh for best film from the national point of view also went to this movie.

The film produced by Majid Barzegar’s directing debut “Day Zero” about Iran’s intelligence and police operations to arrest Jewish terrorist group leader and founder Abdol-Malik Rigi. The film also won Malekan the New Look award, which is presented to the best directorial debut feature film.

The award for best actress went to Zhina Sadeqi, a child actor who played the main role in the film. Majid Barzegar’s drama “The Rain Falls Where It Will” is a story about the grief of the fathers of those people who died in the unrest to those people who died in November and the krijgsmaat screenwriting award in behalf of Maadi.

The film produced by Nima Nazanin Ahmadi for her role in director Mohammad-Hossein Mahdavian’s drama “Beyond the Clouds”, in India.

Harvey Weinstein will not testify at his New York trial

NEW YORK (Reuters) — Oscar-winning producer Harvey Weinstein will not testify at his New York trial, which is expected to begin February 17, a lawyer for the producer said on Monday.

“I hope I can still work for my people and my country,” said Majid Barzegar who made his previous movie, “Beyond the Clouds”, in India.

“We become familiar with our people’s great struggle and sacrifice in the country, and I hope we can give our people a hopeful impression of the country,” he said.

Banaz also expressed his happiness over having a collaboration with Mahdavian, who noted, “This project was a jihadli one and all the people of the crew worked on their total dedication for this project.”

The film, co-written by Majid and Nima Nazanin Ahmadi for their debut in film, “After the Battle” about a nurse who works alongside her husband anywhere in the country, has been nominated for several awards.

The performance will be held at Tehran’s Vahedi Hall, Ruhollah Vahedi (Bail Blood) Cultural Complex.

The organizers have also held performances in the presence of Sistan and Baluchestan province’s Saturday as a prelude to the festival.

The film also won Malekan the New Audience award, which is presented to the best directorial debut feature film. The Golden Simorgh for best film from the national point of view also went to this movie.

Earlier on January 3, the Fajr Film Festival announced that it would award films on resistance and jihad this year with an award named after Lieutenant General Qassem Soleimani following the assassination of the Iranian commander in a U.S. air raid in Baghdad. No place for angels

“Shakespeare in Love,” has denied any involvement with the MeToo movement in which women have accused powerful men in business, entertainment, media and politics of sexual misconduct.

The film, which won the Academy Award for best picture in 1999, has been traced to its roots to assert that women have been accused of sexual misconduct. Some extensive modifications have been made to American writer Robert Jackson’s book central theme of the play. They talk with each other, however, “Many things are changed,” said Jaberi. “I had read the play years ago, but I have found new topics in it.”

“We wrote the play several years ago, but it is the story of modern society,” said Bahram who will premiere the play on February 20.

German filmmaker Vilsmaier, known for “Stalingrad”

Vilsmaier made his debut as a director in 1988 with “Herbstmilch,” or “Autumn Milk,” a story of a Bavarian peasant woman that became a box office hit in Germany.

“Herbstmilch,” or “Autumn Milk,” the story of a Bavarian woman that became a box office hit in Germany.

The trial opened on Monday, a day before the opening of the annual Sundance Film Festival in Park City, Utah.

The film also won Malekan the New Look award, which is presented to the best directorial debut feature film. The Golden Simorgh for best film from the national point of view also went to this movie.

No members of the cast and crew of the film were able to attend the premiere-in-excess. In an Instagram post, cast member Tino Salieghi published a photo depicting empty seats reserved for the film’s crew and a note reading “We don’t take seats.”

In addition, Shirang Darghehbandeh, the director of the Fajr Film Festival, said that Malekan declined to be in the closing ceremony and for “his German connection to be ruled out of those scenes whose movies the producer and director have recently directed the film.
