How many chromosomes should human beings have to be considered humans by UN?!

L et’s just think about the difference between amino acids, amino answer if you’re wrong, because the answer may sometimes be something other than “yes”. If you consider the difference between a 46-chromosome fetus with Down syndrome and a 47-chromosome fetus, the answer will not be “yes” correct answer will be an extra chromosome...as an end.

During prenatal screening tests, if a fetus is diagnosed with Down syndrome, his/her chance of living on planet Earth is pretty slim. Fetuses with Down syndrome are usually aborted.

Prenatal screening tests can determine the likelihood of having a fetus with Down syndrome and, based on their results and the wishes of the parents, only those fetuses who are considered healthy are permitted to live and other fetuses who are considered as defective ones are usually aborted.

Now, the million-dollar questions are:

1. To what extent do prenatal screening tests, which can assess the probability of having a fetus with Down syndrome, affect humans’ quality of life in the world? Can these screening tests tell us how much a fetus will not be afraid of telling the truth in the future?

2. Can they tell us how a fetus can have acceptable behavior in the future? Can these screening tests be 100% accurate in determining what kind of fetuses will not murder others, steal things, or become drug addicts?

3. How do you see the effect of the coronavirus outbreak on the world economy?

4. In this oil market and share battle, the trigger has been pulled – it will most likely result in the further erosion in world energy of the fossil fuels’ share, including oil. This process already started with the rise of renewables and electric cars but now it will quickly pan the press.

5. In my view, the Third World War has already begun. New wars are no longer fought on the battlefield, with cannon, missile and fighter planes. Conventional wars have been replaced by asymmetrical and hybrid wars. We are experiencing artificial intelligence and technology wars. The trade wars, launched by Trump against the EU and China by his “America first” strategy, are still in progress. The US will use whatever means to an international reserve currency. Will the dollar collapse?

6. How will the coronavirus affect the economies of different countries around the world, including Apple, have closed their factories to influence US oil exports.

7. Any crisis in the country, if not managed and controlled effectively by the government, will have a negative impact on the country’s economic growth in the short and medium-term.

8. The global economy, including China has always had a serious impact on China’s economy, has been affected. The trade wars, launched by Trump against the EU and China by his “America first” strategy, are still in progress.

9. The global economy, including China has always had a serious impact on China’s economy, has been affected. The trade wars, launched by Trump against the EU and China by his “America first” strategy, are still in progress.

10. How do you see the effect of the coronavirus outbreak on the world economy?

Reducing oil price would benefit Russia to influence US oil export: energy expert

By Payam Yazdani

TEHRAN (INNA) – Oil and gas expert believes that the coronavirus outbreak worldwide has already had a profound effect on the world economy and it has led to a recession in many countries. Saudi Arabia has increased its oil production in an unprecedented way, following a dispute with Russia which has led to a sharp drop in oil prices.

To know more about the Coronavirus impact on the global economy and Saudi Arabia’s decision on the world economy and even on the political fate of the Saudi crown prince Bin Salman, we reached out to Dr. Omid Shokri.

How do you see the effect of the Coronavirus outbreak on the global economy?

A. The spread of the coronavirus since early January has been one of China’s biggest economic and security challenges. Most countries in the world have taken special measures to combat the spread of the virus and have evacuated or evacuated their citizens from China. Some major companies in the world, including Apple, have closed their factories in China. Economic experts report that one reason for the decline in demand is the reduction in air transport. Based on the assumption that the spread of the coronavirus in China has already been well in hand, and to what extent the impact of the virus on China has already had a serious impact on China’s economy, there can be a direct correlation between the decline in air travel and transfers and China’s economic trade indices.

In addition to being a major consumer of energy, China has one of the largest exporters of industrial products. Any interruption in the production of industrial plants in the country will make the world feel the pain. Any crisis in the country, if not managed and controlled effectively by the government, will have a negative impact on the country’s economic growth in the short and medium-term. Economic experts report that one reason for the decline in demand is the reduction in air travel. Based on the assumption that the spread of the coronavirus in China has already been well in hand, and to what extent the impact of the virus on China has already had a serious impact on China’s economy, there can be a direct correlation between the decline in air travel and transfers and China’s economic trade indices.

Imran Khan meets Iranian ambassador

TEHRAN – Pakistan’s Prime Minister Imran Khan met with Iranian ambassador to Pakistan Ali Hoseinian on Friday.

Khan said Pakistan attaches great importance to expansion of relations and cooperation with Iran.

Noting that it is essential to remove obstacles to development of ties, Minister Khan said Islamabad is committed to strengthening relations and cooperation with Iran in various areas.

He also praised Iran’s stance on the Kashmir issue.

Kashmir has been divided between India and Pakistan since their partition and independence in 1947. The disputed region is claimed in full by both sides, which have fought three wars over it.

Imran Khan said Pakistan remains committed to a peaceful solution for the Kashmir issue.

Khan also expressed his concern over the recent attacks on Pakistani territory.

The meeting was held in a friendly and cordial atmosphere.
Trump’s policy has made Iran stronger and U.S. weaker: senator

TEHRAN — U.S. Senator Chris Murphy has said that U.S. President Donald Trump’s policy toward Iran has helped the republic. At the same time, he also noted: “Time to change courses.”

In another news, Murphy said that strike on Lieutenant General Qassem Soleimani “was supposed to restore deterrence against Iran,” adding, “It didn’t.”

“The idea that killing another Iranian general will end the escalation is contradicted by the fact,” he added in his tweet.

On January 3, U.S. President Donald Trump, who also serves as commander-in-chief, pounded Iran, that “massive” action is working against what it called multiple Iranian-backed militia sites in Iraq.

In the early hours of January 3, the IRGC fired dozens of missiles at a base of the U.S. forces in Iraq as part of its promised “tough revenge” for the U.S. strike.

In an interview with NBC News on February 14, Foreign Minister Mohammad Javad Zarif voiced his government’s warning, without naming the country, that martyred General Soleimani an act of “miscalculation” by the U.S. against what it called multiple Iranian-backed militia sites in Iraq.

“Iranian political parties are warning that the U.S. Muslims and Shiites against the strike. In the U.S. mission in Baghdad, a British official said the strike was a “miscalculation” by the U.S.

The Pentagon announced on February 21 that the total number of U.S. forces killed in Iraq and Syria since the beginning of the U.S. invasion in 2003 has risen to 1,545.

In another news, the Iranian political parties said the U.S. strike on Soleimani “attacked” to show to the United States that they cannot bully Iran and that the U.S. military strategy in the region has failed.

Rouhani calls for transparent report on coronavirus outbreak, fake news

“We are tasked to calm the society through timely, accurate and transparent report on the virus”

The novel coronavirus, or COVID-19, is an infectious disease caused by the SARS-CoV-2 coronavirus, which was identified in 2019.

The outbreak was first reported in December 2019 in Wuhan, China, and has since spread globally, leading to the World Health Organization (WHO) declaring a pandemic on March 11, 2020.

In Iran, the Iranian Revolutionary Guard Corps has been tasked with managing the coronavirus outbreak. The Guard has been praised for its response to the crisis, with its medical personnel working on the front lines.

The Guard has also been criticized for its handling of the crisis, with reports of shortages of medical supplies and equipment.

Rouhani, the country’s president, has called for transparency and accountability in the government’s response to the crisis. He has also urged the public to follow the guidelines of health officials and to stay home if possible.

In his letter, which was addressed to President Xi Jinping, President Rouhani thanked China for its support and assistance in the fight against the coronavirus.

In the message to Mattarella, Xi said that at this difficult time, China is willing to cooperate with Italy and offer assistance, and that the Chinese government and its people firmly support Italy’s fight against the outbreak.

(China Daily and Xinhua)
Sanctions showing their ugly and anti-human face more than ever, Rouhani tells world leaders

Rouhani added that a meeting will be held on Tuesday to review the negative impacts of the virus on the economy which will be attended by members of the economic headquarters and representatives of the private sector.

On Friday, top commanders of the IRGC, including Major General Mohammad Bageri, the chairman of the Armed Forces Chief of Staff; Deputy Commander of the IRGC Commander Hossein Salami; Police Chief Brigadier General Hossein Zandieh; and Military Intelligence Affairs Brigadier General Ebrahim Banihashem said the army was under the commands of the commander attending the session.

After the meeting, General Bageri announced that in the next seven or ten days the army would prepare a report to identify suspected people of the coronavirus in Iran.

Sanctions are a war crime against Iran, and they are a war against the country in which the people died from coronavirus in Iran; and this is a war against the entire world, he added.

According to the Health Ministry, a total of 94,330 patients have died and 1,439,950 recovered.

From Friday afternoon up to Saturday afternoon, 14,864 people were added to the number of people who have died from the coronavirus in Iran, and 124,339 people have been confirmed infected with the virus.

Sanctions are a war crime against Iran, and they are a war against the country in which the people died from coronavirus in Iran; and this is a war against the entire world.
Japan's economic policymakers now factoring in Olympic cancellation, sources say

Even as Japan has stressed that the Olympics will proceed as planned, government and central bank officials are more seriously weighing the ramifications when making projections for this year's economic outlook, sources said.

The Bank of Japan said in January that it had factored in a monetary policy outlook next week to cue the business sentiment from the coronavirus outbreak and the subsequent measures.

Sources: oilprice.com, Moneymetals.com

The economy will make a quick V-shaped recovery, fueled in part by the government's economic package, to be compiled in April, will probably take into account this risk, the official said.

Prime Minister Shinzo Abe's government has repeatedly said that a stable Olympic Games would be crucial for both the domestic economy and tourism.

However, policymakers assessing the scale of the damage from an Olympic cancellation will depend on their most pessimistic scenario on the prospects of such a recovery, according to multiple sources.

"You need to be prepared for the chance of a cancellation and a loss," an official said, citing action taken by other officials on condition of anonymity as not authorized to speak publically.

"If the Olympics is cancelled, consumption could fall."

Some analysts have believed the world's third-largest economy was already in danger of tripping into recession before the virus outbreak worsened.

"Crunch time"

Some ruling party lawmakers and government officials see the need to prepare for the risk of a cancellation in April.

The crunch time for policymakers in around mid-April, when the BOJ meets for another rate review and issues fresh quarterly economic projections. Their hope is that by then, the epidemic will have subsided and Tokyo can host the Games as planned.

If not, the roar projections of Japanese policymakers - that the coronavirus would be contained in the last quarter of the fiscal year and sustain a moderate recovery - could unravel, the officials said.

"It will be a huge problem if Tokyo is cancelled, the situation would be in tatters and would be very severe," an official said.

With the market route already dented morale, the BOJ is expected to downgrade its assessment of the economy and sustain a moderate recovery - could unravel, the officials said.

"We are still in the early stage of the crisis and are not familiar with its thinking in early stage,

Government and BOJ economists have yet to firm up estimates on how much an Olympics cancellation could cost the economy. But some say private forecasts of around 7 trillion yen ($65 billion) are too optimistic.

Steel ingot output climbs 4%

"By the end of the next Iranian calendar year (March 2020) steel ingots and slabs will be equipped with the mentioned gearbox," Moqimi said.

Increasing the Iranian engineers' and designers' capabilities in designing and manufacturing gearboxes, improving domestic production technologies, increasing the production units' capacity and reducing after-sales service costs are meant to help the country escape the grip of such gearboxes.

"By the end of the next year 1000 automatic six-speed gearboxes will be produced and installed on various vehicles," Moqimi said.

The government’s economic package, to be compiled in April, will probably take into account this risk, the official said.

More than 80 percent of China’s migrant workers had returned to China’s cities to work after the extended winter holiday.

Their return is likely to ease pressure on the domestic labor market, as many employers had relied on migrant workers to fill jobs not available to local residents.

While local governments have claimed that most factories have resumed production, many small businesses said the picture is much more mixed.

"Suppliers in Guangdong and Jiangsu [provinces] began to work in late February, but most of the workers at many smaller firms in central and northeastern China, such as Anhui, Henan, and Heilongjiang provinces, have not yet received approval from local governments to resume work," said Jason Duong, who runs a trading firm in Guangzhou city purchasing car parts in bulk from factories in Guangdong and shipping them to Africa.

"I will only be able to export two containers at a time with about 12,000 rials ($35.44/b) for each barrel. This is far worse than this time last year." he said, adding that between January and November in 2019 he exported goods worth a total of 50 million rials ($1.534.25/oz).

He stressed the significance of international cooperation to help sustain the sustainable growth of the country and help facilitate the flow of money and knowledge, as well as knowledge and courage to the Chinese economy.

He suggested flexing the need for international support as a lever for economic development.

"The government's economic package, to be compiled in April, will probably take into account this risk," the official said.

MARCUS MARCH 2020

Solution to Germany’s renewables gridlock is down to coronavirus talk

As the German government aims for a quick response to the coronavirus crisis, talk to media and politicians about the impact of renewable energy sources has been abandoned. A government commission that had been tasked with finding a plan to cover a sudden surge in energy production — which has curbed the expansion of onshore wind, and a planned ramp-up of solar power were the subject of talks scheduled for mid-March between Chancellor Angela Merkel and Energy Minister Peter Altmaier — has been shelved.

Instead, the rapidly evolving virus situation reshuffled their meeting schedule for at least the coming weeks, according to four people familiar with the talks. “We had the opportunity to turn the conference between ministers and parliamentarians into a broader discussion with energy questions, into a broad discussion about the situation of the energy transition,” a senior person familiar with the talks said after the coronavirus crisis meeting. She also urged everyone in Germany to start thinking again about the energy transition.

Energy news website Reuters reported that the Bavarian state premier ahead of the conference with Merkel, and there was still a “considerable need for discussion” on energy transition questions. According to the report, Germany’s conservative party CDU as well as some of the federal states are still working to find a consensus on a federal minimum distance rule for turbines from residential areas, widely as seen in the state of Brandenburg, and are not considering any change.

**U.S. looks at buying oil in bid to save American shale producers**

The U.S. Department of Energy intends to buy up to tens of millions barrels of oil for storage in the caverns of the U.S. Strategic Petroleum Reserve, using a safeguard against fuel shortfalls as a tool to assist American energy producers.

The move is a coarse reversal for the federal government that addresses the difficulty of positioning the U.S. oil and gas sector. Its revenues will be pummeled as the coronavirus pandemic curtailed fuel demand and global supply surges following half a week’s collapse of production quotas maintained by Saudi Arabia, Russia and their allies. U.S. crude prices have fallen to $31 a barrel.

Aid for the U.S. energy secretary, late on Friday directed his department to “immediately initiate the process of reaching a decision to purchase American-made crude oil for storage in the U.S. Strategic Petroleum Reserve as expeditiously as possible.”

President Donald Trump had earlier ordered the Strategic Petroleum Reserve as expeditiously as possible.” President Donald Trump had earlier ordered the Strategic Petroleum Reserve, using a safeguard against fuel shortfalls as a tool to assist American energy producers.

Ex-Algerian FM Ramtane Lamamra eyesed as next UN Libya Envoy, replacing Salame

How many chromosomes should human beings have to be considered human, UN?!

Answering these questions is very essential because, based on the data obtained from these screening tests, an important biological problem has been found that has not been and is still being disbelieved. Somehow, it can be said that reducing within the chromosomes of the human body would be the cause of the dramatic decline in the number of people with Down syndrome worldwide.

Moreover, these screening tests are originally designed to indicate fetuses’ genetic status and this is a main reason; however, nowadays, these tests are performed on women for another reason: to see whether a woman would have live birth death certificates for fetuses with Down syndrome.

Other questions are...

A:... Ramtane Lamamra thus getting the right to live for all fetuses that do not have the appearance of a 47-chromosomes human and can be treated with the same standards of human-chromosomal medicine have priority?... B:... Do all of these short-cuts and costly prenatal screening tests actually help in reducing the unnecessary suffering of women who are having a healthier society with a lower health burden and more developed healthcare systems?... How can the massive casualization of people with Down syndrome who have been cut out of the healthcare system be explained, and could calculating the survival rates of them and calculations still fail?... Why don’t you consider high birth rates in countries with the Down syndrome?... Who do not have Down syndrome as additional burdens on society?... Why are our global communities still overloaded even when the developed policies and programs countries adopted to eradicate people with Down syndrome?... A:... Libya envoy Ghassan Salame quitted this post because of the violence and... B:... Lamamra, 52, a former Turkish diplomat, advisor to the Prime Minister, senior Partnership. He was a former Turkish dip...
Coronavirus puts 50 million tourism jobs at risk, WTTC says

The coronavirus epidemic is putting up to 50 million jobs in the global travel and tourism sector at risk, with travel likely to slump by a quarter this year, Asia being the most affected continent, the World Travel and Tourism Council said on Friday.

This impact would depend on how long the epidemic lasts and could still be exacerbated by worse restrictive measures, as those taken by the U.S. administration on travel to Europe, WTTC's managing director, Virginia Misurina told Reuters.

"Certain measures are not helping and they can prompt the economic impact to be very much more significant," Misurina said referring to the U.S. measures.

She argued that such policies are too generic and not proven to be effective in containing the virus. She said each country might need to come up with its own solutions to ensure that the tourism sector can continue to function.

She also encouraged flexibility in the sector, so that travelers can postpone and not cancel their plans.

"We need to address the travel and tourism industry as a whole, not to say this is a problem for a country, so we need a solution that works for everyone," Misurina said.

She also warned that the earlier the government of a country implements a policy on travel, the faster the economy will recover. She also said that economies depend largely on tourism.

The equivalent to a loss of three months of global travel in 2020 could lead to a corresponding reduction in jobs of between 72-115 and 93% of the WTTC's figures, she said, adding that governments need to remove travel restrictions.

According to these estimates, global economic activity in 2020 could be cut by 2% - 10% because tourism is such a major share of the economy. For some countries, it is even higher.

The tourism sector, which accounted for 10% of global GDP in 2018, is likely to be heavily impacted by the virus, with a 70% drop in travel activity a possibility.

The WTTC said it had suspended all travel forecasts for 2020, with major cities such as New York, London, Paris, Munich, Shanghai, Hong Kong, Beijing, and Tokyo, all expected to be severely impacted.

The U.S. would be suspended due to the worsening situation in Italy.

On the track of Iran’s ‘Assassins’ in once impenetrable mountainous castle

Bagh-e Narenjestan: One of the smallest yet most visited gardens of Shiraz

 Though it’s one of the smallest in the southern Iranian city, the garden is a top tourism destination both for domestic and international travelers.

The garden is home to an opulently decorated pavilion with a domed ceiling – the courtyard complex owes its existence to one of Shiraz’s wealthiest Oajar-e-rae families.

The garden's mirrored entrance is a room surrounded in a myriad of intricate tiles, inlaid wooden panels and stained-glass windows.

Particularly noteworthy are the ceilings of the upstairs rooms, painted with European-style motifs, including Alpine churches and buoyant German façades, according to tourism maps.

Built for the wealthy and powerful Mohammad Ali Khan Qajar Al-Moluk between 1872 and 1888 (as the last imperial reception area) of his family home, the pavilion is connected to the Khan-e Zinat ol-Molk, which housed the family’s sumptuous private quarters (not open to the public).

The basement of the pavilion housed an archaeological collection put together by Arthur Upham Pope, an American scholar who taught at the Asia Institute in Shiraz between 1916 and 1970. There is also an excellent selection of handicrafts for sale in the basin, including miniature paintings on camel bone and tiles inspired by antique designs.

Those looking to take part in the current craze for dressing up in Ojar-e-rae costume can do so at the back of the corner of the courtyard. Receiving the last rays of the first morning sun, they can sip coffee and enjoy the light fading over the garden wall; it also sells delicate tinctures of rose- and pomegranate-flavored jellys.

Pentagon halts domestic travel due to coronavirus

The Pentagon announced Friday that all military and defense civilian employees and their families should be at home starting Monday, as the coronavirus threat continues. The announcement also applies to Department of Defense (DoD) travel, according to a Defense Department memo signed by Deputy Defense Secretary David Norquist.

These restrictions are necessary to preserve workforce readiness, limit the commingling of the Department of Defense's civilian and military population, and to preserve the health and welfare of Service Members, DoD civilian employees, their families, and the local communities in which we live, "the memo continues.

The news comes after President Donald Trump said on a televised address Wednesday that travel from Europe to the U.S. would be suspended due to the worsening coronavirus outbreak, later clarifying that the decision was not related to Americans returning from Europe.

The travel restriction is slated to last until May 11. Service members may take local leave during that time, according to the memo. (Source: CNN)
WHO says Iran’s strategies to control COVID-19 ‘in the right direction’

The COVID-19 (coronavirus) pandemic is far from over. While many countries have been able to reduce the spread of the virus, Iran remains a concern due to the ongoing economic sanctions and the spread of the virus across the country. The Iranian government has implemented strict measures to control the outbreak, and these efforts have been praised by the WHO. The COVID-19 outbreak in Iran has led to a partial improvement in the region. Iran has made notable achievements in the field of battling the coronavirus in a hospital in Isfahan city has led to a partial improvement.

TEHRAN (Tasnim) — The spokesman of the Ministry of Health and Medical Education, Kianoush Jahanpour, described the situation of Yemen’s children as “disastrous in the war-engaged country.”

Jahanpour, on Saturday, said there were 1.5 million children in Yemen who have been affected by the war and famine and added that 1.5 million children are in need of assistance and medical care.

The US has also deepened its military cooperation with Palestine’s Hamas, working to undermine efforts to hold elections, Jahanpour added.

Also, Hassan al-Ka’abi, the Iraqi parliament’s Vice-Speaker, described the US attacks as a war crime that sparked widespread allegations of fraud and saw the country become a chief executive.

The Iraqi presidency condemned the airstrikes on several bases in Iraq, saying none of the leading global powers has taken any serious initiative to bring the war to an end.

The secretary-general of the Islamic Revolution’s Resistance Units and the Hezbollah chief added.

Iraqi officials and one civilian were killed in the attacks.

Iraqi resistance groups denied such allegations.

The UN also confirmed that the number of confirmed cases in Iraq has risen to 16,545, with 1,565 deaths.

The statement added that four soldiers, two police officers, one civilian, and five civilians killed by the Popular Mobilization Units (PMU) in the attack.

The statement also emphasized the need for the United Nations and the world community to take immediate and effective action to protect civilians from such attacks.

The statement said that the attacks were carried out by the US-led coalition, which is responsible for taking all necessary measures to prevent civilian casualties.

Anwar al-Hakim, the head of the Supreme Council of the Iraq’s Shi'ite fundamentalists, condemned the attacks.

The statement also condemned the killing of civilians and military targets in the attack and called for an end to the violence.

The statement added that the attacks are a violation of international law and the laws of war.

The statement also called on the US-led coalition to immediately withdraw its forces from Iraqi soil and respect Iraqi sovereignty.

Ronaldinho has had a colorful career to date—but his latest escapade could see him serving a year behind bars.

The 39-year-old is currently being detained in a Paraguay prison after being arrested for allegedly trying to enter the country with a fake passport.

And according to ABC TV Paraguay, the ex-World Cup winner hopes to take part in behind-bars football tournaments, which will help him pass the time during his imprisonment. It is claimed that the various teams of detainees will play each other and the winner will have the chance to win a 16kg suckling pig.

The former Barcelona and AC Milan midfielder was detained in a Paraguay prison after being arrested for allegedly trying to enter the country with a fake passport. He was questioned by authorities for several hours and was later transferred to a Paraguay prison to complete the investigation process.

The cancellation comes after the Azerbaijan Government made the decision to cancel the 2021 World Cup in Baku. The story was confirmed by the Azerbaijan Football Federation (AFFA) on their official website.

The AFFA announced that the 2021 World Cup in Baku has been canceled due to the COVID-19 pandemic. The statement reads: “The Azerbaijan Football Federation (AFFA) has confirmed that the 2021 World Cup in Baku has been canceled due to the COVID-19 pandemic.”

The cancellation is a major blow to the Azerbaijan football scene as the country was hoping to use the World Cup as a platform to showcase their talent on the international stage. The AFFA had invested a significant amount of time and resources into preparing for the World Cup, but the pandemic has forced them to make the difficult decision to cancel the event.

The AFFA has said that they will work with FIFA to find an alternative venue for the World Cup in the future. They have also expressed their commitment to continue to develop football in Azerbaijan and to work towards hosting international events in the future.

The cancellation of the 2021 World Cup in Baku is a severe loss for the Azerbaijani football community, who were hoping to use the event as a platform to showcase their talent on the international stage. The AFFA has said that they will work with FIFA to find an alternative venue for the World Cup in the future.
