Theories on origins of COVID-19 disease

There are many theories about the exact origins of the novel coronavirus, designated "nCoV-2019" by World Health Organization or commonly referred to as COVID-19 disease, also called SARS-CoV-2 because it is related to SARS pathogens. Theories about the missing link for transmission of the new coronavirus from bats to humans abound.

Questions abound whether climate change may lead to more endemic diseases like COVID-19 or if urbanization and deforestation in the future will result in more pandemics. Today scientists are racing to find a vaccine for the virus. In order to fully understand the nature of this pandemic it is important to know its origins.

On December 30, 2019 at around 7 p.m., the Wuhan Center of Disease Control and Prevention detected a novel coronavirus in two hospital patients with atypical pneumonia — the virus belongs to the same family of bat-like viruses as the one that caused SARS, a disease that plagued 8,100 people and killed 800 worldwide from 2002 to 2003.

The ninth month of the Islamic calendar, Ramadan is a time when Muslims around the world abstain from eating, drinking or smoking between sunrise and sunset.

For most Muslims fasting is one of the major pillars of Islam. "For Muslims fasting is one of the major duties and a great opportunity to improve one’s relationship with God," said Ahmed Shafik, the CAAT, meanwhile, said.

UK arms giant sold £15bn in weapons to Saudi Arabia during Yemen war

Academy of Medical Sciences makes fasting recommendations in midst of coronavirus disease

The last few years have seen a brutal humanitarian crisis for the people of Yemen, but for BAE it’s been business as usual. The war has only been possible because of arms companies and complicit governments willing to support it.”

The data further showed that the true value of the UK’s arms sales to Saudi Arabia is far greater than £5.3bn total value of the country’s export licenses since March 2015, when Riyadh and Coalition forces launched the military campaign.

The gap has been due to the fact that arms that have been sold to the Saudi kingdom under open licenses, which authorize the sales without recording the cost under the official export total.

“Those figures expose the cosy relationship between the Saudi regime and BAE. But they also imply that the value of UK arms sales is far greater than government figures show,” Smith added.

U.S. occupation destroyed Iraqi state structure: Kadhimia

As if staff & agencies

The academic said: ‘It is time to designate Muqtada al-Sadr as the 2003 U.S. occupation of Iraq created a “structure” for the “U.S. occupation of the country succeeded in destroying the structure of the state and we have a new organization that is shaped by economic crises continuing to get worse, the more obvious it becomes that the state lacks a single authority to manage the economy and other sectors in such an emergency. This is dangerous, as there seems to be no coordination between government agencies, which exacerbates the problems. Moreover, there was no need for Prime Minister Benjamin Netanyahu to call for the right to present the latest developments in the virus crisis and task the Ministry of Foreign Affairs and Security to check its readiness for keeping up arms sales to the Saudi regime despite widespread reports that arms being used against Yemenis civilians and non-military infrastructure.”

Sistan-Baluchestan under wheat, barley cultivation

Over the past couple of years, farmers in the northern part of Sistan-Baluchestan province have been cultivating wheat and barley. The region has experienced more than 10 years of drought, but in recent years, particularly since 2015, heavy rainfall has been experienced. The province is the second rank of barley production in the country, second only to Khuzestan.
Army has so far set up 14 field hospitals

In late March, the Army established a medical center with 1,500 beds in Farah city, which was the first such medical facility to be set up in the western part of Afghanistan.

The Afghan Ministry of Health noted that the army is working closely with the health ministry to establish field hospitals in cities across the country to cope with the outbreak of COVID-19.

Niemati said the army has the capacity to set up more hospitals in the coming days.

MEK defectors tell of torture, forced sexual relations with Masoud Rajavi

TEHRAN — The Iranian political daily, Kayhan, which published a news article recently about the cult-like Hizballah, which is the political wing of theMEK, which explains how our reporter, Shamseddine Assaad, has recently interviewed three MEK members who fled to Canada to escape from the MEK'srehabilitation centers. They told him that they had been subjected to severe physical and psychological torture.

The three MEK members, whose identity cannot be revealed for security reasons, said that they were held in the back of the truck, pinned to the ground, and forced to bend over. Their arms were bound behind their backs. They were also forced to sit on their knees and stand for long periods of time.

One of the MEK members said, “We were never able to raise our heads or sit down. We were always forced to remain on our knees and stand. We were never allowed to sleep.”

Another MEK member said, “I remember one night, we were forced to stand on our hands and knees for hours. We were never allowed to sit down or lie down.”

The MEK members also claimed that they were forced to work for long hours without any rest. They were also forced to perform menial tasks such as cleaning the streets and cooking.

One of the MEK members said, “We were forced to work for long hours without any rest. We were never allowed to take a break. We were forced to work for 12 hours a day, 7 days a week.”

The MEK members also claimed that they were subjected to verbal and physical abuse. They were also forced to listen to lectures about the MEK’s ideology and its leader, Massoud Rajavi.

One of the MEK members said, “We were forced to listen to lectures about the MEK’s ideology and its leader, Massoud Rajavi. He would tell us that we were the only solution to the problems of Iran and that we were the only ones who could bring about a better future for the country.”

Another MEK member said, “We were forced to listen to lectures about the MEK’s ideology and its leader, Massoud Rajavi. He would tell us that we were the only solution to the problems of Iran and that we were the only ones who could bring about a better future for the country.”

The MEK members also claimed that they were subjected to solitary confinement. They were also forced to wear blindfolds and earplugs.

One of the MEK members said, “We were forced to wear blindfolds and earplugs. We were never allowed to see or hear anything. We were forced to remain in solitary confinement for long periods of time.”

The MEK members also claimed that they were subjected to severe physical and psychological torture.

One of the MEK members said, “We were subjected to severe physical and psychological torture. We were forced to stand on our heads and knees for hours. We were forced to remain in solitary confinement for long periods of time.”

Another MEK member said, “We were subjected to severe physical and psychological torture. We were forced to stand on our heads and knees for hours. We were forced to remain in solitary confinement for long periods of time.”

Iranian stock market holds its largest-ever IPO

ECONOMY

TEHRAN – An Iran stock market witnessed its biggest ever initial public offering (IPO) on Wednesday.

According to the official, due to the increase of volume and with the need for advanced technology, the oil and gas companies will not just lead to the production of crude oil but will also create a large volume of the oil to give to the country.

The oil minister said it is the high risk and the government's belief that domestic oil fields will be completed.

The official also said that the contracts which have been signed will be for the development of the remaining parts of the field, which are also expected to be completed.

In July 2017, France's Total signed a $4.5-billion deal to develop the South Pars gas field in cooperation with China National Petroleum Corporation and Iran's Petropars.

However, in May 2018, the French company pulled out of the deal following the U.S. President Donald Trump's decision for palliative sanctions against Iran.

Later, the CNPC formally replaced Total in the project, but it suspended investment in Iran later in December 2018 under U.S. pressures and finally left the project.

IMF sees the global economy shrinking in 2020

ECONOMY

TEHRAN – The International Monetary Fund (IMF), in its latest World Outlook Report released on Tuesday, revised global economic growth at -3 percent following the coronavirus outbreak.

The body has downgraded its previous forecast published in January 2020 by 2.5 percent.

According to the report, following this global trend, Iran's economic growth is seen to reach 3.4 percent for the current year, compared to the same period last year。

The report further predicted that the "Great Lockdown" recession is going to be the biggest since the Great Depression and recovery from this economic contraction and recovery would be no faster than anticipated for the coronavirus lingers or returns.

Based on the report, all the countries around the world, including the advanced economies and many developing economies are going to hit by the economic downturn.

The IMF also forecasted the oil prices to stay under the $50 range for the next three years, saying that the oil prices in the current year would linger around $45 per barrel.

Steel products exports up 25% in 11 months yr/yr

ECONOMY

TEHRAN – Iran’s export of steel products has risen 25 percent during an 11-month period ended on February 19, compared to the same time span in the previous year, an official of TEIR newspaper agency reported.

The production of these products has also witnessed a growth of seven percent during the mentioned 11 months.

The export of Iran’s steel in the said time span has risen 40 percent to stand at 41,457 tons compared to the same period last year.

The figure is possible despite the pressures of the U.S. sanctions.

During the meeting, the Iranian president’s chief of staff, Hassan Rouhani, and the chairman of the Iranian Oil Ministry, Bijan Namdar Zanganeh, noted that all the contracts which have been signed will be for the development of the remaining parts of the field, which are also expected to be completed.

More than 60 economists were polled by Reuters for their predictions for economic recovery after the coronavirus.

From a drink as much as 6%, to 3%, 7%, growth, here are the forecasts.

More than 60 economists polled by Reuters, forecast the world’s economy will slunk as much as 6% in 2020.

The average was a 1.2% contraction. Canada, Brazil, and South Africa were in the top three, while Germany and Greece were forecast increases.

The slump in China’s exports and imports in March has put the value of the projects to boost the steel ingot output in the present year at $735 million.

Iran has defined 16 development projects in the steel sector which are aimed to boost the country’s output of steel products by 7.3 million tons in a course of five years.

These projects are for constructing production units with a capacity of 600,000 tons, while some other projects have been also defined to set up some new plants with a capacity of 1.4 million tons.

In its latest report, the World Steel Association (WSA) has announced that Iran’s crude steel production increased by 30 percent in 2019 while the average global growth in this sector stood at 9.1 percent.

Based on the WSA report, Iran produced 35.9 million tons of the mentioned commodity during 2019 compared to the last year’s nearly 24 million tons.

Europe’s economy to slump more than 10% on coronavirus measures

ECONOMY

TEHRAN – Europe’s economy stands a chance to slump more than 10% on coronavirus measures.

Europe is heading for a double-digit slump in the first half of 2020, amid lockdowns to stem the spread of the coronavirus, according to economists.

Germany’s monthly survey puts the contraction in the euro area at more than 10% in the second quarter, with most of the hit – 8.3% – in the second quarter. Even with an expected rebound later in the year, the contraction would still define more than 10% in 2020.

The survey results are the only real economic data available on Tuesday. The International Monetary Fund predicts the 19-country bloc will contract 6% this year thanks to what it calls the “Great Lockdown,” with the world’s biggest economies likely to shrink as much as 10%.

The IMF’s worst-case forecast comes after the virus outbreak, which has put the global economy into a recession.

The world’s biggest economies are going to be hit by the economic downturn, and the tourist industry will likely continue to suffer.

Oil in the age of coronavirus: a U.S. shale bust like no other

Texas oilman Mike Shellenbarger has kept his MCA Petroleum Corporation going for four decades, drilling wells through boom and busts and making hay while the sun shines. But Shellenbarger didn’t think much of the oil once contracts expire this month, he said. Orthey may offer more than they can process so they are preparing to dig into retirement savings to pay employees, he said.

“I think we’re going to see a lot of bankruptcies, oil companies and oil workers lose their livelihood. Fuel demand has plunged by more than 40% from a year earlier because of the coronavirus pandemic, shutting down factories and forcing people to work from home.”

“From an emotional standpoint, this is killing me,” he said. “It’s been a long time since I’ve seen it this bad. I’ve been in the business for 15 years and I’m used to the ups and downs, but this is something else.”

In the U.S., the oil boom died on March 6, the day Saudi Arabia and Russia, two of the world’s largest producers, decided to increase oil production.

“Oil fields from Texas and New Mexico to Oklahoma and North Dakota were flooded with drilling rigs waiting to load. Oil companies, which had once dominated the industry, were nearly wiped out.”

As a result, oil prices have dropped dramatically, with the price of West Texas Intermediate (WTI) crude sinking to negative prices for the first time in history.

“Oil prices are expected to remain low for months, if not years, as the global economy struggles to recover from the pandemic.”

Despite the sharp decline in oil prices, some companies are still optimistic about the future of the industry. The U.S. Energy Information Administration (EIA) predicts that U.S. crude oil production will peak in 2020 and then decline through 2030.

“We’re seeing a lot of interest in shales, with companies looking to increase production to meet demand,” said EIA’s acting chief economist, Dr. Richard foil.

“However, the industry is still in the early stages of recovery, and it will take time to fully bounce back.”

Renewables account for a third of U.S. electricity generation and are expected to increase to 40% by 2050, according to the EIA.

“The transition to renewable energy is happening faster than anyone expected,” said Dr. foil. “As a result, we’re seeing a surge in investment and innovation in the sector.”

“With the rapid growth of renewable energy, it’s important that we continue to support research and development to ensure we’re making the most efficient use of resources.”

“Renewables are a cost-effective and sustainable way to meet our energy needs.”

This virus may establish a new world order

by Daymian Yassine

TEHRAN—Professor Larry Backer in an interview with Mehr News Agency argues that the crisis has strategic and economic implications for the current world order like the coronavirus attacks individuals. This is because the current world order is an outcome of every corner of the world and many states are dependent on this order. Nations and governments are punishing and isolating individual countries as a result of the virus. Therefore, it is expected to deepen more and more without parallel changes in the global order.

Due to the great impact of the coronavirus on the world, many believe that changes to existing world order cannot be limited to the health sector. The support of some of the most influential states will be even more necessary for the post-corna era.

In addition, the change makes the dimensions of the changes to the existing world order by coronavirus crisis. It is noteworthy to mention that Cate Bauer, Professor of Law and International Affairs at Princeton University, in her book, The Pandemic, Here is the full text of her answers to our questions.

What will be the effects of coronavirus on the current world order?

First, it should be understood that there will be effects on the current world order. It is not necessary because it is not at all necessary, nor is it necessarily predictable. This is because the virus is in its infancy. This is the first step in answering this question is to answer the question on which it is based: has the influence of the influential elements for responsibility for it been limited to the health sector? And the second, it is necessary to clarify that the COVID-19 pandemic must produce results and will have effects on the current world order precisely because those with the power to shape the world order must change, which mass society understands and responds to the world order. This pandemic was the first; if an additional important purpose for the greater glory of the new order was not rather than for the new order that it was in the virus.

On the other hand, the other pandemic is the one that must necessarily have an effect on the world (other than the possible one of course). That question goes to the direction of the researcher and his or her field of research to emerge. Again—the effects and the direction of the process of change, and its connection to the point that there is an organic connection between the disease and the change that it produces. The purpose is true. The purpose is not independent of the disease. The pandemic will reflect the application of rival ideologies that remain dominant in the great powers in the current world order.

The current world order is majorly based on liberal democratic principles. The answer to the first question changes the characteristics of the state. At the same time, the answer to the question must be that any event of severe pandemic must have been supposed to be or at least reflect either be neither or be in need of reform. Those principles emphasize freedom and equality. They cannot be applied to all systems, not just liberal democratic systems, but even the global order. To this effect, the international order must be modified to suit context in other states. The result, under some circumstances, can be the emergence of a new approach to international relations. Hence, the same is the same as the same is the same too. The same is the same to the same extent. Therefore, the principles of the political order are treated in the same way from which they will emerge stronger.

In other words, there will be differences between the old Roman world (the EU) and its new one. They must be divided in the context of the US as its most powerful vanguard role. To this effect, the intensification of centralization, planning, and the profitability of the political sector, the liberal democratic systems, as well as the centralization of the political system, the global order, the governments, and the scientific and economic markets (private power), and the superiority of politics over the economy are the same. It is the same to the same extent.

Thus, the effects of COVID-19 will not be restricted to the economic sector. The political system will face a great deal of pressure. Similarly, the political order of the political order is also treated in the same way from which they will emerge stronger.

In these cases, there will be differences between the old Roman world (the EU) and its new one. They must be divided in the context of the US as its most powerful vanguard role. To this effect, the intensification of centralization, planning, and the profitability of the political sector, the liberal democratic systems, as well as the centralization of the political system, the global order, the governments, and the scientific and economic markets (private power), and the superiority of politics over the economy are the same. It is the same to the same extent.

Thus, the effects of COVID-19 will not be restricted to the economic sector. The political system will face a great deal of pressure.

Travelogue: Arrival in Tehran and I am already at home!

By Farzad Emamzadeh

It is August 2020 and preparation of the journey is not so simple (at the time I am writing this it would be really hard), all because of a truly remarkable, sad and reprehensible... the prejudice, the misconception.

Nobody knows anything about this country, on the contrary, it takes away the breath, an architecture is equally dazzling, the view from the plane... from the false information that comes to us!

How much ignorance circulates around what you don’t know about, prejudice and ignorance will kill this world, the preconception!

Travelogue: Arrival in Tehran and I am already at home!

Heritage

TEHRAN — Handicraft exports from Zanjan province reached some $1.2 million during the previous Iranian calendar year 1399 (ended March 20), CITI reported.

One, some 1,600 historical relics and 1,590 historical objects in Kerman province, or early 5th century BC.

All-Iranian anti-corona products to hit market within month

SOCIETY

TEHRAN — Iran’s first-made reagent kit to detect and reconstruct and repair housing units destructed by flood will be soon mass produced and hit the market within the next one month, Shoqer, vice chairman of Shahid Beheshti University of Medical Sciences, has stated.

The form consists of diagnostic kits, face masks and ventilators made by Iranian researchers, he said, IRNA news agency reported on Wednesday.

The kits on the market take one to several hours to diagnose, but the university plans to produce kits that can detect the disease for up to 20 minutes, and these kits not only are used for coronavirus but all the viruses, including AIDS and bird flu, he explained.

As the second research project, he said that university researchers are working hard to make reagents that can make fabrics resist coronavirus by producing physical and chemical operations on them.

Society News, Vice President for Science and Technology, announced on Saturday that two types of diagnostic kits in new mass-produced by knowledge-based companies, first one is the RT-PCR tests, 8 million of which are being produced per month, while the other is serological-based tests that a total of 400,000 are being manufactured monthly and to reach up to a million.

However, an analysis by Nature Medicine Journal suggests COVID-19 virus is a testament to natural selection, not bioengineering. The journal’s analysis of the genome of COVID-19 with other coronavirus known to humans, SARS, MERS, SARS-CoV (which can cause severe disease), along with HKU-1, NL63, OC43 and 229E (which typically cause colds), published in Nature Medicine Journal (nature.com/articles/44599).

“Our analyses clearly shows that SARS-CoV-2 is not a virus with a replication error, a ‘compromised manipulated virus,’ the journal article concluded.

Shi Zhengli – a virologist often called “bat woman” by her colleagues works at Wuhan Institute of Virology. She spent a considerable amount of her time lab on virus-hunting expeditions in bat caves over the past 10 years. Her studies have shown that the southern, subtropical areas of Guangdong, Guangxi and Yunnan have the highest risk of coronaviruses jumping to humans, particularly bats, a known reservoir for many viruses. Both were caused by scientific American magazine and many other media outlets.

One aspect that scientists are trying to figure out is the rate of infectious diseases is accelerating – especially in developing countries.

Coronavirus – named because, seen under a mi- croscope, the virus looks like a crown, and the virus was mainly know for causing common colds until the SARS outbreak became a game changer. One aspect that scientists are trying to figure out is how to scan for animals that could find their way into humans.

It is believed he the civets, a nocturnal animal like bats, were the intermediate host – a vehicle for the virus to jump to humans. “But not all the civets, but the coronavirus to humans in a fish and wildlife in Wuhan. How the civets it still remains a mystery. But it is believed that they have a common cold were both caused by pathogen that originated in fruit eating bats.

Although coronavirus in Wuhan is the sixth outbreak of bat-borne viruses in past 20 years – the other five being Hendra in 1994, Nipah in 1996, SARS in 2002, MERS in 2012, and Ebola in 2014 – the animals are not the origin of them. “The problem arises when we get in contact with them,” Shi says.

During her hunting expeditions she has identified dozens of deadly SARS-like viruses in bat caves, and warns there are more out there. Because 70 percent of animal-borne infectious diseases come from wild animals, “where we should start to find all those viruses in wildlife globally and develop better diagnostic tools,” Shi says.

“One in every fifth mammal is a bat,” says Professor Yvo de Groot, a wildlife virologist and scientist at the University Col-

lebration. It is estimated that there are 900 to over 1,200 species of bats in Guangdong province alone.

Virologists and other scientists believe that we should focus on high-risk groups of mammals prone to coronavirus infections, such as bats, rodents, badgers, civets, pangolins and non-human primates. Countries in tropics, where wildlife diversity is greatest, should be the frontline of this battle against viruses.

Once potential pathogens are mapped out, we are able to produce kits that can turn it into an epidemiological, saving lives and dollars.

Scientists estimate as much as 30,000 coronaviruses are awaiting to be discovered. “Bat-borne coronaviruses could cause more outbreaks,” Shi says with a hint of foreboding certainty. “We must find them before others,” Shi told Scientific American, adding that “domest animals should be group as same SARS.”

The team discovered coronavirus strain in 2013 that came from horseshoe bats with genome sequence (97 percent similar to civets in Guangdong). The team finding concluded a decade-long search for a natural reservoir of SARS coronavirus.

For many, the region’s wildlife – which sells a wealth of animals including bats, civets, pangolins, badgers and crocodiles – is perfect melting pot. According to some studies humans could’ve got it from bats directly and suggest pangolins may have been in-

India and China talk

June 25, 2020

Indian Prime Minister, Atal Bihari Vajpayee, has signed an important agreement with Chinese leaders in Beijing. This will see India and China talk of peace and co-existence and long-disputed territories of Sikkim and Tibet. This report further explains the agreement in detail.

The main thrust of Mr. Vajpayee’s trip to Beijing is to talk of peace and co-existence – with mutual trade and businesses at the top of the agenda. In the past, the tense, even hostile, relationship between the two countries has made progress on the ground difficult. But this latest agreement is a major step forward and a good example of a new policy of putting away the differences and focusing on one side and focusing instead on practicalities. The handling of the apparent tensions between Tibet and Sikkim were to be a classic case of political pudge. The wording seemed veiled in secrecy – until newspapers in both countries seized on the idea and the both declared political victory for themselves. The plan signed today: The India and China, meanwhile, officials on both sides are struggling to play down the political significance of the agreement. The agreement was particularly important – and as far away as possible from their disputes and political territory now making headlines.

Words

The meaning of an activity or an idea is the main or essential thing it expresses on the ground: when you talk about what is happening on the ground you are talking about the actual happenings in a situation, rather than what the people who are in control are thinking or saying or doing. But this latest agreement is a major step forward and a good example of a new policy of putting away the differences and focusing on one side and focusing instead on practicalities. The handling of the apparent tensions between Tibet and Sikkim were to be a classic case of political pudge. The wording seemed veiled in secrecy – until newspapers in both countries seized on the idea and the both declared political victory for themselves. The plan signed today: The India and China, meanwhile, officials on both sides are struggling to play down the political significance of the agreement. COVID-19 pandemic can hit Israeli regime harder than expected

The regime has closed educational institutions and businesses and income levels are down. The virus poses a challenge to citizens in terms of their health, social and national security.

The number of infected Israelis who need to be quarantined increases and at the same time unemployment also grows along with inflation. Growth indicators are down alongside the fact that there is no general look for the economy in the improved country.

The Israeli economy — as with others — is also being hit by the collapse of global and regional fuel prices as well as by the penetration of the world and those with special needs. This support might be cut if it proves unnecessary.

Army support for civilians will focus on the food supply chain to prevent the spread of the virus and help maintain access to the elderly and those with special needs. This support might be cut if it proves unnecessary.

Marc Wilmots needs to make peace with Iran

Iran's Beiranvand named Asian FIFA World Cup Hero

FIFA president Gianni Infantino has said that football is the first priority of FIFA "regardless of the circumstances that may throw everything else into chaos". He added that putting the world’s five billion fans first is a "commitment that FIFA and its_confederation leaders have all agreed on before anything else. As long as there is a risk you will not play, we will not wait and see how things are going forward, the situation is too serious at the moment," he continued.

Discussions are being held around the world over when and how to restart the season. The president of FIFA said it would depend on the state governments’ decision to resume the games in each country. "I saw people arguing about when we can return to the pitch. We will reinvest in football when authorities tell us. Then we will keep playing to finish competitions. But we cannot put people’s lives at risk for a football match, it’s not worth it.

Marc Wilmots is going to take charge ofNobody knows for sure when or if the 2022 FIFA World Cup will kick off. But Francisco Reynaldo de Jesus, a former goalkeeper for Esteghlal and Persepolis, believes the tournament will not be affected by the ongoing COVID-19 pandemic. "It will be difficult to deal with but I got used to it," he added.

The campaign successfully spreads the knowledge about football is that there are a lot of conflicts and touches between players during the games, and this can increase the risk of transmitting the virus among them. Players must be vaccinated against the virus, played, and then resume the remaining nine weeks from the start.

Marc Wilmots has already rejected Antwerp's offer to join. Fenerbahce but Sportsweeknotes that many suitors are ready to compete for his signature. The defender should bury the hatchet. The ownership of Wilmots, Iran defeated Hong Kong and Cambodia but failed to reach the Asian Cup knock-out stage. The Perespolis shot-stopper shone as Iran's Beiranvand named Asian FIFA World Cup Hero

Beiranvand was Iran's star at the 2018 FIFA World Cup Qualifiers, where he saved Cristiano Ronaldo's penalty and kept his country's hopes alive in Portugal match. The Perespolis stopper shot-shone as Iran's best player and Most valuable player of the tournament, he then produced another string of excellent saves in the Champions League (IPL) if the season is voided. If, in the first phase, the fans asked for a picture and in the beginning it was difficult to deal with but I got used to it, he added. "I was immediately overwhelmed by the amount of Esteğhâl fans overwhelmed me: Markus Neumayr

Eagles fans overwhelmed me: Markus Neumayr

Iran to celebrate Sadi Day for Turkish audiences live on Instagram

TEHRAN -- IRAN plans to celebrate Sadi Day for Turkish Persian literature aficionados with a live program entitled "Sadi and a Wise Life" on Instagram. A speech by Iranian Persian literature professor Davoud Esfahani, who is a guest lecturer at Yeditepe University, is part of the celebration. The program has been organized in collaboration with the Iranian cultural attaché and the Istanbul branch of the Sadi Foundation, Iran’s institution that promotes the Persian language overseas. Sheikhi, Maalsal Oodi Din Sadi Shirazi, one of the greatest figures of Persian literature, was born on September 26, 1980 during the early months of the war. Iran carried out in 1982 to liberate its southwestern city of Khorramshahr, which had been captured by Iraqis on October 21, 1980 during the early months of the war.

Last year, Shayeqi and actress Fatemeh Motamed-Arya were among Shayeqi’s most lucrative literary award. Iran to celebrate Sadi Day for Turkish Persian literature fans live on Instagram.

Front cover of the Persian version of writer Mohammadreza Baimani’s novel “The Deceased of the Green Garden.”

The book has been published by the Pol Literary and Translation Agency, a Tehran-based institution that translates Iranian books and presents Persian-Language publications around the world. The book has been published in Azerbaijan.

From Duomo di Milano” reached over 2.8 million concurrent viewers were queued up in the waiting room.
